Good Ensilage Will Make Both Milk and Beef

I have a farm of 109 acres. I am interested in a silo. Would one be a paying proposition or not? Would it be all right to feed silage to cows to make butter? What size would you suggest to feed four to six cows and six to ten steers? Would you recommend ensilage for chickens?—C. M. G., York County, Pa.

A silo is a paying proposition on a dairy or livestock farm. In the first place there is less loss in the corn crop when it is put into the silo than when it is allowed to cure in the field. Experiments with dairy cattle at Vermont showed that when the corn crop was harvested thru the silo, it made eleven per cent more milk than when harvested by the field curing method.

It Saves Room and Labor

In the second place the silo saves room. A large amount of feed can be stored in a comparatively small space.

Third, it saves labor. The corn is handled but once—when it is put into the silo.

Fourth, the silo provides excellent feed which is highly desirable for milk production purposes.

Experiments at the Pennsylvania State College also show that the most economical method of producing gains on steers is to feed them corn silage supplemented with cottonseed meal. Nine different experiments at four experiment stations all agree in showing that more milk is produced from the corn crop if it is harvested as silage.

An Aid to Butter Production

Silage is an excellent feed for cows from whose milk butter is made. It is succulent, palatable, and appetizing. It also keeps the cow's alimentary tract in good condition, and sharpens her appetite so that she keeps in good health. Silage should be fed after milking rather than before milking, so that no flavors from the silage may be imparted to the milk.

Any kind of a silo that fulfills the following requisites will be satisfactory. First, it should be air-tight and smooth on the inside. Second, it should be sufficiently strong to withstand the pressure of the silage, and durable enough that it will not have to be replaced for a considerable period of time.

A wooden stave silo is satisfactory when placed on a foundation of concrete. If the staves are treated with creosote it will materially increa the durability of the silo. This ty of silo requires attention to keep th hoops at the right tension. Th wooden staves should last from t to fifteen years. It is probably th cheapest type of silo to erect.

Concrete, tile blocks, or brick ma be used for a more permanent ty of silo. The concrete silo may built of concrete blocks, concre staves, or with solid walls. If sa and gravel are available, and can secure the forms for this pur pose without too much expense, solid wall or monolythic concr silo is quite satisfactory and may b built at moderate cost. The til silo is quite popular in some sectio of the country and brick silos rein forced with iron rods or heavy wi in the masonry have also been quit satisfactory. Some other materia used less frequently include iro stone, and wood with a cement li ing. Any of these materials will pr serve silage satisfactorily if the e sentials already mentioned are pre ent.

Right Size for Small Herd

A silo ten feet in diameter a thirty feet in height should be a sat isfactory size to take care of fo to six cows and six to ten steers. should be placed on a strong co crete base. Frequently it is adva tageous to have a pit about three four feet in depth lined with co crete. This gives additional dep to the silo without much additio cost.

Ensilage is not very satisfact for chickens especially if there a not many kernels in the corn. T anatomy of the chicken is not su that it can handle much roughag Chickens frequently become c bound when fed silage. Therefore, is better to use silage mostly for y cows and steers.—A. A. B.

Buying Tested Cattle

RECENT improvement in the m market is being reflected in t increased activity of cattle buy in Wayne County. Several cars fine springers recently left the cou ty. The latest car to go was p chased in the southern part of t county to be delivered at Port Jer New York.

While the most of the availa tuberculin tested stock has been so there are still two or three carlo of purebred and grade Jerseys to sold.—W.

Secretary Jardine on the Business of Farming

"THE American farmer is a business man. He has a greater capital investment than the average retail merchant. His business is vastly more complex than that of the average retail merchant.

"The labor problem on the farm is much more serious than in most other lines of business, especially because of the seasonal character of most farm work.

"More factors—at any rate, more factors that are not subject to human control—enter into agricultural production than into factory production, say. The selling and the distributing end of the farm business has proved difficult, partly because the turnover is limited by nature herself, partly because the farm unit is such that the same man has had to attend to production, distribution and everything else. I wonder if the city business man who had to work under the same conditions as the farmer would be able to show as satisfactory results as the farmer shows, even today."—Secretary of Agriculture Jardine in an interview in The Nation's Business.

Merit proved by time

TWENTY years and a Globe Silo is still in service. Why? They are built of the finest materials—spruce and fir. Heavy matching walls, double splines, sealed joints and adjustable doors make them absolutely air-tight. Not only now, but a generation from now. The extension roof makes a Globe Silo the cheapest per ton capacity—an exclusive Globe feature. Increases value of farm. Durable, convenient and profitable—these are the time-proved merits of a Globe. Write today for catalog and price-list; silos, tanks, ensilage cutters, stanchions, etc.

More people are talking about this Fine Car than any other Car in America

Of course people are talking about this new fine Overland with six cylinders. *Of course* they are drawn into liking and admiring and wanting this remarkable car. For motor car buyers these days are real students of quality, close judges of value—buying shrewdly and keenly after making shrewd and keen comparisons. ¶ The public was bound to admire the fascinating beauty of the new Overland Six. And bound to appreciate its fine comfort and luxury. ¶ The power of this car is a joy. You can overtake and pass nine out of ten cars on hills, and likewise on the open road. In traffic the swift getaway of the new Overland Six makes cars around you seem listless and poky. ¶ Great smoothness is engineered into the engine. The wonderfully balanced crankshaft is ingeniously drilled to receive perfect lubrication at all speeds. And by ingenious developments in six cylinder design friction and wear have been minimized to the vanishing point. That means great endurance. ¶ You need but one look at the new Overland Six to know why it is receiving such an enthusiastic welcome. It has beauty and style, comfort and luxury, to a degree never before offered at such a low price · · · Willys-Overland, Inc., Toledo, O. Willys-Overland Sales Co. Ltd., Toronto, Can.

SHERWIN-WILLIAMS
PAINTS AND VARNISHES

For Cleaning Painted and Varnished Surfaces use Flaxoap. Made from linseed oil—contains no free alkali—restores original lustre.

YOU can do the same.

Save the Farm Painting Guide, put it up on your wall in a permanent place, and then, every time you go to buy paint, varnish, stain or enamel, look at the "Guide" first.

The Guide simply makes it *easy* to select the RIGHT type of paint, of varnish, of stain and of enamel exactly as a color card makes it easy to select the right color; *it stops mistakes in painting.*

Be sure to look up "Paint Headquarters"

The store in your community displaying the "Guide" and carrying the correct Sherwin-Williams finishes is "Paint Headquarters." Look for the "Guide" in the window and inside the store.

The Sherwin-Williams Dep't of Home Decoration will gladly give you individual suggestions for your home if you write them. Ask for free booklet B450 and for free set of handsome color plates. If you want the most complete book on home decorating ever issued, 177 pages, many beautiful full-page decorative schemes in colors, send 50c (65c in Canada). Write The Sherwin-Williams Co., Dep't B435, 610 Canal Road, Cleveland, Ohio.

OPEX
LACQUERS ENAMELS

Specify Opex for *repainting your auto.* Opex is the modern nitrocellulose lacquer with the satiny finish that will not scratch, mar or chip [illegible]. Actually improves with age. Dries quickly—car out of the shop in a few days. Wide range of colors. Be sure to ask your auto paint shop for Sherwin-Williams Opex.

For Cleaner floors with Less work

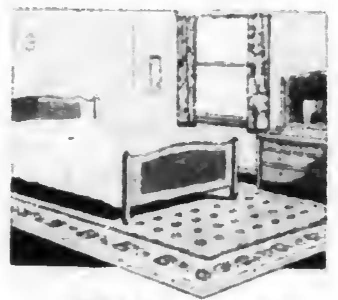
Armstrong's Linoleum Rugs

Wear longer—genuine cork linoleum clear through to the burlap back

The cost is so little

Sitting-room and Dining-room

All roads lead to the dining room and many the scuffling, soil-stained boots along the way. Three times a day a rush of feet, big and little, tracking carelessly over your floors! What more sensible, sanitary, and fresh-smelling than an Armstrong's Linoleum Rug for this heavy traffic room? "2 minutes mopping and—CLEAN!"



Bed-room and Nursery

Windows flung wide, day and night, dust settles thick on upstairs floors. How easy to keep them sanitary and clean by stroking a damp mop over, an Armstrong's Linoleum Rug. "2 minutes mopping and—CLEAN!"

"Gracious me, am I *too* getting to be an old-fashioned drudge?

—am I needlessly missing the leisure, the laughter, the friendships I STILL *have a right to? Surely there* MUST *be some easier-to-clean floor covering."*

Armstrong's Linoleum Rugs *are* easier-to-clean. "2 minutes mopping and—CLEAN!" And they *stay* clean longer because an Armstrong Rug is always solid, genuine cork linoleum, clear through to the burlap back.

You just *can't* dislodge ground-in soil from a floor surface that splinters and chips off into pits and jagged hollows, without going back—hands and knees—to the old-fashioned, back-breaking scrubbing brush. So let's forget that, once and for all, and get an ARMSTRONG RUG.

ARMSTRONG CORK COMPANY
Linoleum Division
1002 Jackson St., LANCASTER, PA.

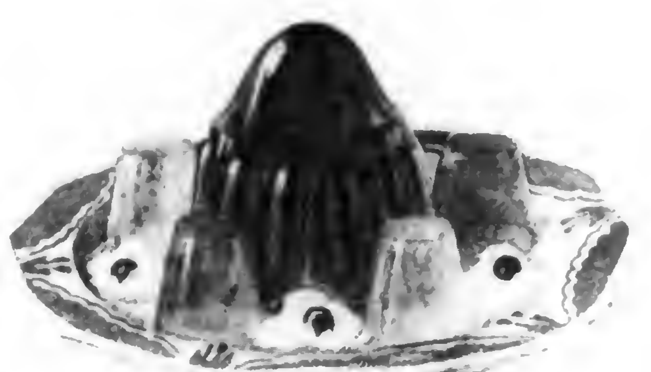
Three appetizing JELL-O *desserts*

YEARS ago it was necessary for the housewife to spend much time and trouble in the preparation of desserts. Pies, puddings and other sweets required many ingredients in the making, as well as long hours spent in the hot kitchen. Then, there was always the uncertainty that the dessert would not be successful.

To-day, this has all been changed. In Jell-O, we have a dessert which is simple and easy to prepare, yet may be served in so many ways that there is always variety. It removes the uncertainty from dessert making and provides a delicious, healthful sweet at a small cost.

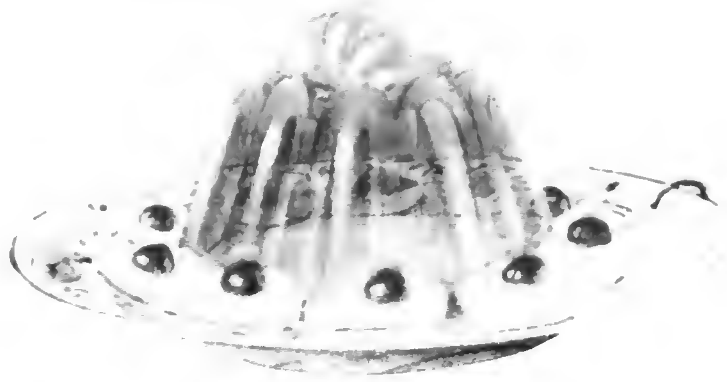
Serve Jell-O often;—give it a prominent place on your household menu. The family will enjoy it and the children usually ask for a second helping.

Three favorite Jell-O recipes are given below—many other delightful suggestions for desserts and salads may be found in the little folder in each Jell-O package or write us for our new Jell-O book. *It's Free.*



ORANGE JELL-O

Dissolve a package of Orange Jell-O in a pint of boiling water and pour into mold. Serve plain or with custard sauce or whipped cream. In the illustration below the molded dessert is garnished with sliced pears and cherries.



STRAWBERRY JELL-O

Dissolve a package of Strawberry Jell-O in a pint of boiling water. Pour into a bowl or mold and set in a cold place to harden. When set, turn out on a plate and serve plain or with whipped cream.

CHERRY-LEMON JELL-O

Dissolve a package of Cherry Jell-O in a pint of boiling water and pour into mold. Dissolve a package of Lemon Jell-O in a pint of boiling water and when cool pour into glasses or plain individual molds. Turn the Cherry Jell-O out on a large plate and arrange the individual Lemon molds and dabs of whipped cream topped with a cherry around it, as in illustration above.

Helping the Lamb Crop to Make a Good Start

THERE is an old saying that there are two periods of the year when the shepherd must be on the job in order to make a success of his business. These two periods are during the breeding season and at lambing time. Sheep must not be neglected at other periods of the year, but these are the two most important periods. If the ewes are not safely bred during the fall there will be no lambs to care for during the spring, and a ewe cannot be maintained on the income from the fleece alone without the addition of a lamb crop. After the lambs are well started in life they require much less care and attention than at, and immediately after, lambing.

At most farms the ewes drop their lambs while in winter quarters. If the barn or shed is dry and reasonably free from drafts, it makes a desirable place for lambing, except during very cold weather when it may be necessary to seek an especially warm place for the ewe to lamb.

Should Be Separated from Flock

If a record has been kept of the date of breeding the ewes can be separated from the rest of the flock a few days before the 148-day gestation period is up. If a record has not been kept, the ewes that are about to lamb can be detected by the swelling of the udder and the abnormal, sunken condition in front of the hips, and at the rump at either side of the spine. The ewes will also seem uneasy, pacing about the pen.

Such ewes should be separated from the rest of the flock and put in small temporary pens. This will prevent the young lambs being trampled by the other ewes in the flock. The ewe and her lamb also become better acquainted and accustomed to each other, and there is little danger of her disowning her lamb. It is also much easier to get the lamb to nurse the dam in a small enclosure of this kind. If the lambs are strong and vigorous the ewe and lamb may be put back with the flock at the end of three or four days.

Ewes Need Exercise

If the ewes have had good care and plenty of exercise during the gestation period, they will have very little difficulty at lambing time. It is well, however, to watch them closely so that help can be given any ewes that may have difficulty in lambing. If the lamb is in a normal position, the forefeet will appear first with the nose placed down snug on the forefeet.

In case the lamb is not in this position, which is frequently the case, the shepherd should attempt to push the lamb back and get it in the right position for delivery. The abnormal position in which lambs are frequently found is with the head back over the shoulders, one leg back, or the body doubled up with the back coming first.

Before an attempt is made to get the lamb in the right position, the proper precaution must be taken against infection. This consists of trimming the finger nails, properly disinfecting the hand and arm, and also greasing the hand with vaseline. After the lamb has been placed in a normal position there is as a rule no further difficulty in lambing, but if there is further difficulty the ewe should be assisted by pulling steadily on the forelegs.

As soon as the lamb is born, the mucus should be wiped from the nose and mouth, and the ewe and lamb left alone for a short time. If the lamb is strong he will soon get up and begin to nurse. If the lamb does not seem to be able to find the teat or if the ewe, because of being nervous, will not let the lamb nurse, assistance must be given.

When Cow's Milk Must Be Fed

There are times when it becomes necessary to feed cow's milk to lambs on account of the death of the ewe, or when triplets are born. In such cases it will be necessary to start the lamb gradually on cow's milk. Begin by feeding about two tablespoonfuls at a time every two hours. The milk should be fed from a bottle with a nipple attached. The bottle and nipple must be kept clean and the milk when fed should be fresh and near body temperature,—about 100 degrees Fahrenheit. After the lamb is about three weeks old it should be fed three times a day and given all the milk it will consume.

The growth and development of the lamb will depend upon the feeding of the ewes and the lambs. In order to give a liberal supply of milk the ewes must have plenty of feed. This should consist of several kinds of feed, and the ration should be rich in protein. A succulent feed, such as roots or silage or good pasture, should form a part of the roughage. Good legume hay should make up the balance.

Rations for Ewes and Lambs

The grain should consist of about three parts bran, three parts corn, three parts oats, and one part oil meal. The amount to feed will depend upon the ewes, but should be enough to keep the ewes in good condition, which will take about one pound of grain per ewe per day.

The lambs will begin to eat grain when about two weeks old. It is a good practice to build a creep in which the lambs can be fed and where the mature ewes cannot get at the feed. They should be fed only a small amount at the beginning and the daily allowance gradually increased. A good grain ration for lambs consists of ground corn two parts, crushed oats two parts, linseed oil meal one part, and wheat bran one part. The lambs should have access to good legume hay, such as alfalfa or clover. The troughs and racks should be cleaned daily.—W. H. T.

York-Adams Corn Show

COUNTY AGENT R. E. UNDERWOOD, of Adams County, reports that any farmer in Adams or York County may receive free of charge, one-half bushel of Golden Queen and Lancaster Sure Crop seed corn from the Hanover Trust Company, Hanover, York County. The purpose of this is to aid in standardizing the corn grown in communities which up to the present time have not fully appreciated the advantages to be gained in growing these well known varieties. Five men in the McSherrystown community, Adams County, have signified their intention to plant the best seed available with the idea of competing for first prize in the Inter-County Corn Show which R. E. Underwood and George Weber, county agents of Adams and York Counties, respectively, hope to stage next fall.—A. L. B.

The Sharples 1925 *"Quiescent Current"* Separator

The Allsteel Separator
[600 lbs. per hour]

Sharples Allsteel Cream Separator

Turns easier than any other known separator

Joseph Beckinbaugh, Richmond Furnace, Pa., says his two-year-old boy turns it. That is younger than we recommend, but it indicates the ease of turning. One finger turns it "like a feather." Wife, please take notice!

Gets more cream and more butter than any other known separator

It skims equally clean at widely varying speeds. Other separators may skim clean at a fixed speed, but no other separator does at all speeds. It is humanly impossible to always turn at one speed.

Made of wrought steel—not clumsy cast iron—and wonderful Duralumin, open blade—rust-proof sanitary skimming device

These Allsteel Separators are light and neat looking, but durable and efficient beyond comparison.

A short lecture, but well worth reading

There is a vast difference in cream separators of different makes, and don't think there is not.

The advertising claims of all read alike because language is as free to one person as another.

Neither the words nor the amount of advertising make it better. We are ourselves large advertisers, but that is not what makes our separators better.

A trial side by side with others will tell the tale

Never order any separator on trial unless you order also an Allsteel on trial beside it, so that you may know what should be expected of a separator.

This little Allsteel Separator will look light and small when you get it—so does your watch look small beside a Big Ben, but the watch will last longer and keep better time. But the little Allsteel is a wonder for work and will last a lifetime. We build exactly the same skimming bowl into a heavy cast iron frame and gears. Below is the picture of it. It is an excellent separator. It would please you better than any other kind of separator except the Allsteel.

This heavier, larger separator will skim faster and better and will satisfy you better and will turn easier than any competing separator of like capacity, but not as easily as the Allsteel. Either will last for years.

Take our word for it. We have been selling you separators for over forty years. Our reputation is back of what we say. What we sell you has to please you, has to satisfy you in every way or you return it and get all your money back—if you have paid before trial.

A $100 Allsteel Separator for $82

The famous *Sharples Allsteel Cream Separator*—600 lbs. capacity per hour—is a $100 Separator and the best Separator for $100 that anyone ever bought. We have never had a price below $100 on this separator, and thousands are at work giving supreme satisfaction to their purchasers.

We give thirty days' absolutely free trial, together with an allowance of $15 for your old separator and twelve months in which to pay by easy installments.

But now we are overstocked with old second-hand separators of every make and cannot dispose of the surplus except for old iron.

For that reason we will, for a time, accept your order for a $100 Allsteel Separator at $88—you keeping your old machine if you have one.

Or if you pay cash at end of 30 days' free trial, send but $82.

Mark X in square on coupon showing plan of purchase you desire, then sign and mail to us.

Sharples 1925 Heavy-build Separator

Heavy-build Separators Made in Two Sizes
700 lbs. per hour—$100
1650 lbs. " " $165

We make a complete line of Tubular separators from 200 lbs. per hour capacity to 10,000 lbs. per hour capacity. Send for printed matter.

Exclusive agencies open in unoccupied territories to good working dealers.

CUT HERE, SIGN AND MAIL TO US.

Like Grandma Used to Make

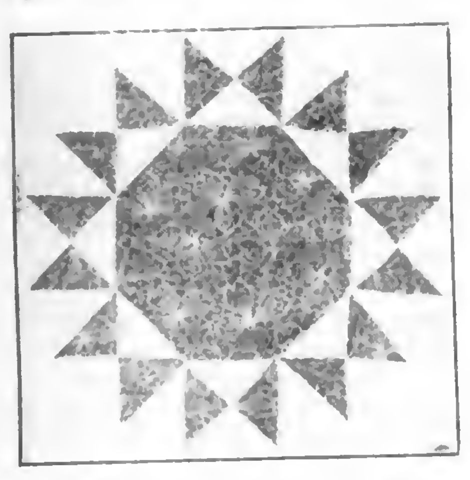
Quilt Patterns Today Can Be Just As Effective

ISN'T there something in the personality of an old time bedroom that greets us with a feeling of hominess and an air of hospitality, that makes us want to linger awhile? I have visited some of the quaintest cottage homes in my quilt rambles.

Some of the big roomy bedrooms had braided rugs, painted floors and the old time wall paper, that we are able to get reproduced this season. Of course, always, an old quilt—patched or pieced—sometimes a feather bed.

A Truly Restful Place

It was my good fortune to visit such a home last summer and it was such a quiet, restful place that when I get real tired at my desk I can just close my eyes and think of that farm home where the interior decorators have not been.

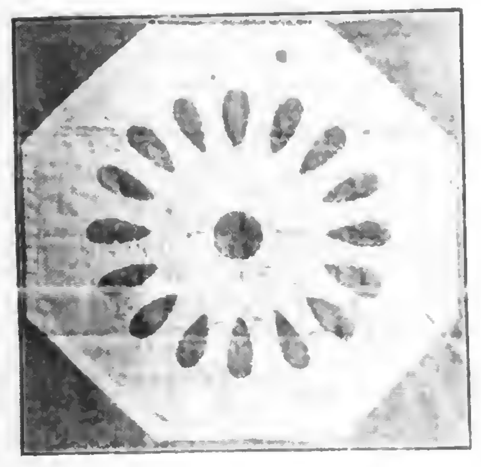


The wheel of fortune design.

Some of our rooms have been made perfectly beautiful by decorators but we need a few that are "just left as they are." The quilt was popular in our grandmother's and great-grandmother's day. They took so much pride in their quilting. Then fashion decreed that quilts be discarded, and for a time we did not see them unless we looked thru an old chest or in the attic.

Quilts are used extensively in our homes today and many of the old patterns are being reproduced. The pieced quilts of years ago were made from scraps left over from the family sewing, but today the same patterns are made to harmonize with the color used in the bedrooms and they are wonderfully pretty.

The beautiful shades of the sunfast ginghams we are able to buy partly compensate for the "heirloom" story of the old quilts. There are so many ways to join the blocks that we cannot give the exact amount of material required for a pattern. Sometimes we set together with alternating white squares—some joined solid and others with strips of white or color, about four inches wide.



An original octagon.

Diamonds or squares quilted solid, thru the design and all, are very popular and effective. The little chintz patterns we have in gingham are so pretty and old timey looking that they seem made for old patchwork.

A figured material combined with the plain makes a striking looking quilt and the "Wheel of Fortune" shown here is a good pattern for a combination. The center piece of figured blue, pink or yellow and the small triangles of a plain color to match the predominating color in the figured. I am sure will please any quilt lover.

Isn't the "Original Octagon" pretty? It is made of white appliqued on blue and can be joined with narrow strips of white or the applique would be attractive if made of a chintz pattern and set on a solid color with the strips the same as the applique. —C. S.

Patterns may be secured thru the Household Editor. Price, twenty cents each. Allow ten days for filling order.

Good Luck—Good Fare

IN BYGONE days hot cross buns were frequently used as a charm against witchcraft,—probably from their being stamped with the sign of the cross.

Herrick in his "Hesperides" alludes to their powers in the following:

Take the holy piece of bread,
Lay it underneath the head;
'Tis a certain charm to keep
Hags away while children sleep.

Even today when we have outgrown superstitions, it is called a sign of good luck to eat hot cross buns on Good Friday, and they are said to insure plenty during the coming year.

Among the legends in which hot cross buns play a part, is the one dating back to the seventeenth century. The seamen of Greece were accustomed to take to sea with them thirty buns. When a storm arose, these were thrown into the sea one at a time, until calm was restored.

A Charm Against Toothache

From early days hot cross buns were also employed against physical complaints. In a book entitled "A work for householders" published in the sixteenth century, the following for the charming away of toothache is found:

"The charmer taketh a piece of bread and maketh a cross upon that bread, then doth he lay the piece upon the tooth that acheth, or unto any sore, laying the cross unto the sore or disease, so is the person healed."

Few people realize how general is the eating of hot cross buns, yet bakers who send out loaves of bread on other days by the hundreds, are usually required to bake these buns by the tens of thousands for their Good Friday trade.—L. M. T.

HOT CROSS BUNS

2 cups milk, scalded and cooled to lukewarm
1 cup yeast or 1 cake compressed yeast, softened in ¼ cup lukewarm water
Flour to make a thick batter
Let this sponge rise over night.

In the morning add:

2 egg yolks beaten light
½ cup sugar
¼ cup melted butter
¼ teaspoon salt
A little grated nutmeg
Flour enough to roll out

Knead well and set to rise. When light, turn upside down on a board lightly dredged with flour, roll into a sheet and cut into rounds. Set in rows in a buttered baking tin. Let rise for half an hour. Make a cross on each with a knife, and at once put them into the oven. Bake half an hour. Brush the cross on each bun with a pastry brush or clean feather dipped in white of egg beaten into a stiff meringue with white sugar.—I. S. H.

Papering Problems

As I have been a subscriber to Pennsylvania Farmer for a number of years, I am coming to you for a little help.

I moved into an old house five years ago, and have fixed it over quite comfortably excepting my bedrooms. Now here is my problem:

My rooms are about 7½ feet high in the middle, but are lower on the sides. The ceilings and walls have been whitewashed for years and had a coat of tinting over the whitewash.

Now I have been told by a paperhanger that paper will not stick on walls that have had tinting on them. Can you tell me what would be best to give the walls a desirable appearance?

I am much in favor of painting ceiling and sides, but again I don't know how to go about it. What colors would you suggest? Would it be nice to put two colors in each room, one color for the ceiling and one for the sides? If so, what two colors harmonize?

Two of these bedrooms are large and the other small. Please tell me if you know of any way to make paper stay on these walls, and also your opinion of painting them.

On the first floor I used Chinese gloss lacquer over a yellow ground paint, and now it needs to be washed, and I would also like to know what to use that will not harm the paint, as I don't want to wash it with anything that will take the gloss off.—Mrs. H. K.

Let me say first of all that if your rooms are only 7½ feet high, and lower on the sides, they will be much prettier if you keep walls and ceiling the same color. If you have one color for the ceiling and another for the walls, it will make the rooms look lower than they are. I don't mean that you might not use a lighter shade of the same color on the ceilings, and a slightly darker shade on the walls.

Since your walls have been tinted, why not re-tint them instead of papering?

If You Decide to Paper

If you do decide on paper, be sure to choose one that is plain or almost plain. Large figures or bright colors don't make a good background, and your rooms would appear unrestful and crowded.

To make your paper stick to the walls that have been tinted, wash the walls with strong vinegar before applying the paper. Use this method:

Make a thin glue by dissolving glue chips in boiling water and thinning with cold water. Wash this over the walls. When thoroly dry, put on the paper as usual, using a flour paste in which a cup of dried glue chips has been dissolved in every gallon of boiling water.

To clean your paint use equal parts of linseed oil and kerosene on a soft cloth. Follow with a clean dry soft polishing cloth.—I. S. H.

We Need the "Pretties"

WE READ sometimes advice to us busy farm wives to cut out fancy work. I say "No"; sometimes things of this sort stay in my sewing basket a long time, even a year or more, until I can get them done as I wish. For instance, no pillow case goes into my linen closet without being marked, even those for the hired man's room. Every room has its special pillow cases. For my own room they are hemstitched and marked with the initial "S" in a variety of styles; the last ones I made are an old English letter outlined in white and the center filled with tiny briar stitching with blue tatting thread.

Proffered Help Accepted

I usually have something of this sort on hand for visitors who say they want to do something to help. I never refuse offers of aid of this sort. One visitor finished for me a lot of plate doilies that I had been trying to get done for everyday use.

I have a sister-in-law who is very clever at re-arranging pictures or furniture, and when she comes I make use of her.

No, I do not believe in cutting the fancy work out of our lives because we need all of such recreation that we can get to brighten up our lives and belongings. Just because we are busy farm women is no reason why we should deny ourselves some of the pretty things.—Mrs. M. S. S.

How about a Success Number?

DURING the past months our readers have asked and received advice on many different topics. Here are just a few: Butchering; gardening; curing of furs; making baskets, quilts and paper flowers; improving complexions; restoring hair; remodeling houses; choosing and using washing machines.

Were you one of those who asked advice? Did you follow it? Did you get good results? Won't you write us briefly of your success? Probably many members of Our Family are delaying the rearrangement of a kitchen or the purchase of a washing machine, until they get your assurance that "it works."

Some day we may ask for a report on your "failures,"—the things you tried or bought in haste, and are repenting of at leisure. But a "success" number is more cheerful, so let's have that first!

Home Garden Comes First

It Means a Great Deal to the Whole Family

THE number of farmers who live with little or no garden is surprising. This is poor policy, as it affects both health and pocketbook. Now is a good time to start in the right direction. I would suggest sending for a few seed catalogues if a stimulus is needed. Few can scan the pages of one of these and not get the desire to raise some of the plants described and illustrated.

Make the garden small enough so that it will be well taken care of, but make it as large as can be kept in good order. We do much of our garden work in the early evening. I enjoy gardening and watching the growing plants.

Try to get the children interested. Give them a row or corner for their own, and see how they enjoy it.

The Garden Feeds the Family

Many farmers feel that the garden is the least important crop, and the wife loses enthusiasm when she has to wait to have it plowed and fitted until all other crops are taken care of. The garden is the most important crop, as it is eaten instead of sold, and is actually worth consumers' prices.

Our garden gets the best care of any crop. The ground is often plowed twice. It always gets two coats of stable manure, one of which is plowed under, and the other, well rotted, is put on top after plowing and is dragged in. The garden is dragged until it is like a flower bed. This makes it easier to care for afterwards.

Plant peas, beets and radishes very early. These will stand much cold. Plant a row of flat turnips early. The seed costs little, and if they do not mature, there will be plenty of time to put something else in their place. They mature early and are enjoyed by our family as much as any vegetable. Raise your tomato plants if possible. Be sure to sow a package of cabbage seed just as you do your radish seed.

To Have Early Potatoes

Transplant to places where other vegetables failed to grow, or have been gathered. In this way, enough for fall and winter use are easily raised. Plant a few early potatoes in the garden. They are much thriftier if placed in a light, warm place to grow little green leaves, instead of long pale sprouts before planting.

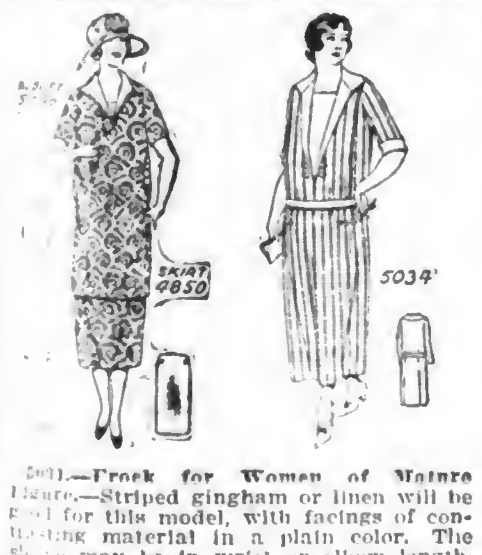
Successive plantings of radish, turnip, beet and sweet corn should be made. Have a long row of rhubarb. This is best early, but can be used all season if kept picked.

I like a row of gladioli and one of dahlias in our garden. They make little work and give us beauty in the fall when the garden itself has lost its charm.—Mrs. E. M. C.

We All Want Something New

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

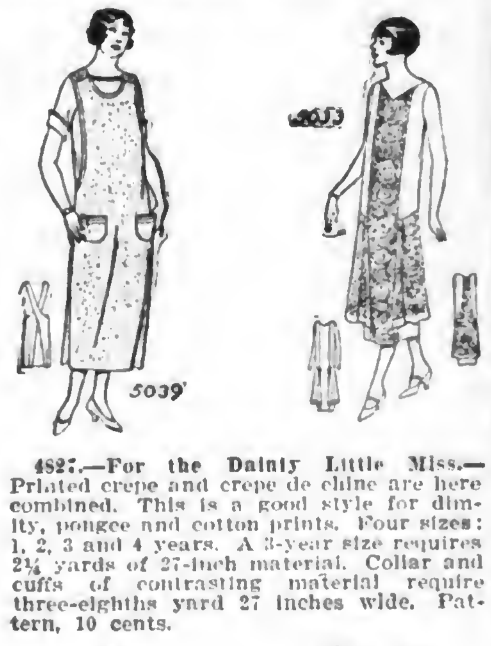
5046-4850.—A Smart Tunic Costume.—Printed voile was used for this design. Collar and vestee are of organdy. Pattern 5046 was used for the tunic blouse and 4850 for the skirt. The sleeves may be short or in wrist length. Blouse is in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Skirt is in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure with corresponding hip measure, 35, 37, 39, 41, 43, 45 and 47 inches. The width of the skirt at the foot is 1⅝ yard. To make the costume with short sleeves for a 38-inch bust size will require 5⅝ yards of 40-inch material and one-half yard for vestee and collar of contrasting material. If made with long sleeves three-eighths yards more will be required. Two Patterns, 10 cents each.



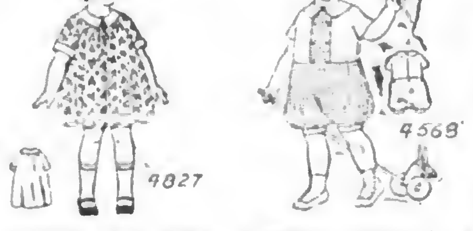
5034.—Frock for Women of Mature Figure.—Striped gingham or linen will be good for this model, with facings of contrasting material in a plain color. The sleeves may be in wrist or elbow length. Nine sizes: 40, 42, 44, 46, 48, 50, 52, 54 and 56 inches bust measure with corresponding waist measure, 33, 35, 37, 39, 41, 43, 45, 47 and 49 inches. To make as illustrated for a 44-inch bust will require 4½ yards of 36-inch striped material, and seven-eighths yard of plain for facings. The width at the foot is 1¾ yard. Pattern, 10 cents.

5039.—A Comfortable Apron Style.—This simple design may be attractively developed in linen, unbleached muslin, sateen, gingham or percale. Four sizes: small, medium, large and extra large. A medium size requires 2⅞ yards of 32-inch material. Pattern, 10 cents.

5033.—Youthful "Dress-up."—Metal brocade and chiffon were used to make the charming style here portrayed. One could use crepe and chiffon or lace and georgette in combination. Three sizes: 16, 18 and 20 years. An 18-year size requires 4⅝ yards of one material 40 inches wide. The width at the foot is 1⅜ yard. To make as illustrated in the large view will require 2⅛ yards of brocaded material and 2 yards of plain material 40 inches wide. Without sleeves one-half yard less material is required. Pattern, 10 cents.



4827.—For the Dainty Little Miss.—Printed crepe and crepe de chine are here combined. This is a good style for dimity, pongee and cotton prints. Four sizes: 1, 2, 3 and 4 years. A 3-year size requires 2¼ yards of 27-inch material. Collar and cuffs of contrasting material require three-eighths yard 27 inches wide. Pattern, 10 cents.



4568.—And This for Sonny.—Here is a style that will appeal to the busy mother of little children, especially those of the "creeper" age. This design provides a convenient closing at the inner seam, which is very practical for children below two years of age. The garment may also be made with this seam closed, for the back is in drop style. Pattern is in 3 sizes: 6 months, 1 and 2 years. A 6-month size requires 1⅜ yard of 36-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

Only Firestone Builds

BALLOON Gum-Dipped CORDS

The Mark of Quality

Farmers everywhere are praising the comfort, safety and economy of Balloon Gum-Dipped Cords—advantages made possible by the special Firestone process of gum-dipping.

Gum-dipping insulates every fibre of every cord with rubber, giving extra strength to the light, strong, flexible side walls to stand the extra flexing strain.

Specify Gum-Dipped Balloons—Full-Size—built only by Firestone. The nearest Firestone dealer will make the changeover quickly and at low cost—with liberal allowance for your present tires.

Keep Musterole on the bathroom shelf

Years ago the old-fashioned mustard plaster was the favorite remedy for rheumatism, lumbago, colds on the chest and sore throat.

It did the work all right, but it was sticky and messy to apply and my how it did burn and blister!

The little white jar of Musterole has taken the place of the stern old mustard plaster.

Keep this soothing ointment on your bathroom shelf and bring it out at the first cough or sniffle, at rheumatism's first warning tingle.

Made from pure oil of mustard, with the blister and sting taken out, Musterole penetrates the skin and goes right down to the seat of the trouble. *To Mothers:* Musterole is also made in milder form for babies and small children. Ask for Children's Musterole.

35c and 65c jars and tubes; hospital size, $3.

Our Young People's Forum

Cousin Ruth's Letter

Dear Forum Friends: — Almost hidden from the road by a fringe of woodland stands the old New England farmhouse in which the poet John G. Whittier was born in 1807. There, on a little farm among the Massachusett hills, the Whittier boys helped father in the fields and barn, and there during those fierce New England blizzards they had merry times digging tunnels from house to barn or piling great stacks of logs beside the huge kitchen fireplace. But there, I'm not going to try to tell the story of those "blizzardy" days for I hope all of you know Whittier's own story of a winter in that farm house of his childhood. If

"Shut in from all the world without,
We sat the clean-winged hearth about.
Content to let the north-wind roar
In baffled rage at pane and door."

In the fireplace still hangs the ancient crane and on the hearth kettles and warming pans that were once so busy now stand idle.

Like you, the boy Whittier had to go to school, and there in a room of this old house is the desk upon which he must have worked arithmetic problems and now and then scribbled bits of verse that his teacher never saw. What a quaint house it is with all the rooms opening off of

Whittier Birthplace, Haverhill, Mass.

any of you haven't read his poem "Snowbound" see if you can't find it in a book at home or at school. All I'm going to do is to tell you a very little of the place as it is today so that next time you hear anything about Whittier he'll be a real person to you who not long ago was a small boy like you Forum boys.

Spring days like today remind me of that day last summer when I first glimpsed the homestead thru the trees. We stopped the car on the very spot where John and his brothers tunneled thru the drifts. Indoors, in that "old rude-furnished room," the kitchen, yawned the great mouth of the chimney that he tells us about in "Snowbound."

the kitchen and a short flight of steps leading to the tiny bedroom that was his mother's.

Outside again, we wandered past the old well sweep into the garden, beyond whose wall is Fernside brook. But that summer day we were there no water bubbled over the stones, and we looked in vain for a trickle where once the barefoot boy Whittier paddled in delight.

If ever you travel to Haverhill, stop in at the Whittier home. There may not be so much to see but you'll enjoy his poems a lot more after you've been there than you did before—at least I did. Try it for yourselves.

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I have been a reader of the Forum page for three years. This is my second letter to the Forum friends.

Cousin Ruth asked some of us to tell her how we celebrated Washingtons' and Lincoln's birthdays. We didn't have a program for Lincoln's birthday, but we read a Lincoln booklet and learned the poem he gave at Gettysburg. We celebrated Washington's birthday by having a program. I was in several parts. I had a recitation to say called, "The Birthday Lesson." I was [illegible] Washington. The smallest pupil in our room was Betsy Ross and she made the flag.

I wish the boys and girls of Franklin County would wake up and write some letters to the Forum page. With sincere wishes to Cousin Ruth and the Forum friends.—Phyllis P. Chamberlin, Franklin County, Pa.

Dear Cousin Ruth and Forum Friends:—I am twelve years of age and go to Mt. Zion School. I have a great many schoolmates and we play football, rabbit, tiger, leap frog and many other games. My favorite is football, I like it best.

I live on a farm of forty acres, we have five large fields. My father plows the ground and sometimes I harrow. I always roll it with the landroll when he isn't plowing, because we only have two horses.

I have one sister. She goes to the vocational high school and is fourteen years old. In the fall I cut corn and sometimes help to husk.

The snow is all gone now and we will soon dig the garden and plant seeds.—Conrad Lobel, Dauphin County, Pa.

Dear Cousin Ruth:—I am twelve years old. I can not go to school. I have to walk on crutches. I have always wanted to be a member of your club but I never wrote till now. I am learning to draw. I am taking lessons from a school in Cleveland.

If you don't mind I will send you a picture the next time I write.—Allen Shaw, Armstrong County, Pa.

Dear Cousin Ruth and Forum Friends:—As I have not written to you for such a long time, I thought I would write you a letter.

Friends, isn't it nice that we can have such a nice page in the Pennsylvania Farmer and such a nice Cousin Ruth? I think so.

I am fifteen years of age and am a freshman in McConnellsburg High School. I like to go to school very much. I live in the sunny countryside and don't think I would like to live in the city.

One morning I looked out of the window and saw a robin perched on a maple tree, singing a song to me. So I wrote a poem about it. The poem is:

ROBIN REDBREAST'S SONG

This morn as I was rising,
The sun was rising, too;
I heard a sweet song murmured
Under the skies of blue.

I wondered what it may be,
I wondered, oh, so long,
And then, it dawned upon me,
'Twas Robin Redbreast's song.

Out there among the bushes
Up in a maple tree;
Was Mr. Robin Redbreast
Singing a song to me.

I said to Mr. Robin:
"We welcome you and spring,"
He nodded as if he understood,
And again began to sing.

And later in the morning
The sun was shining high,
I saw Mr. and Mrs. Robin
Hurriedly flying by.

And now, out in the orchard,
They're as busy as can be
Gathering material to build a nest,
Up high in the old apple tree.

Well, indeed, I must close as I do not wish to take all the space. Cousin Ruth, don't you think it is more beautiful in the country than in the hot, dusty city?

With all good wishes for the Forum friends.—Eliza Motter, Fulton County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—All you have to do to solve this puzzle is to draw lines from the dots you see in the picture. Draw from 1 to 2; from 3 to 4; 5 to 6; 7 to 8; 9 to 10; 11 to 12; 13 to 14; 15 to 16; 17 to 18; 19 to 20; 21 to 22; 23 to 24; 25 to 26; 27 to 28; 29 to 30; 27 to 31; 33 to 15; 8 to 34; 11 to 35; 36 to 21; 6 to 23; 17 to 25; 15 to 36; 2 to 31; 32 to 19; 11 to 29; 13 to 32. That may sound like a lot of lines but it won't take you very long to read the answer after the lines are drawn. When you have found the answer send it to me on a POSTAL CARD not later than April 4. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in March 7 issue of Pennsylvania Farmer is: GEESE, PIGEONS, SHEEP, CATTLE, DOGS, PIGS, CATS, CHICKENS, GOATS, HORSES.

The prize winners are: Elea[illegible] S. Anderson, age 10, Claverack, N. Y.; Kenneth Bonham, age 9, Hemlock Creek, Pa.; Charlotte C. Dirlam, age 9, Honesdale, Pa.; James Lyman, age 8, Eddystone, Pa.; Stella M. Miller, age 12, Peach Bottom, Pa.; Eleanor L. Nudig, age 7, Carlisle, Pa.; Austin Schultz, age 8, Lansdale, Pa.; Elizabeth Scott, age 7, Elmer, N. J.; Howard T. Virdin, age 8, S[illegible], Del.; Richard Wrestley, age 8, Boswell, Pa.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

HOW good it seemed to be back in the old room under the shingles! The heat of the stove-pipe had warmed its hospitality.

"It's been kind o' lonesome here," said Uncle Peabody as he opened the window. "I always let the wind come in to keep me company—it gits so warm."

I lay down between flannel sheets on the old feather bed. What a stage of dreams and slumbers it had been, for it was now serving the third generation of Bayneses! The old popple tree had thrown off its tinkling cymbals and now the winter wind hissed and whistled in its stark branches. Then the deep, sweet sleep of youth from which it is a joy and a regret to come back to the world again. I wish that I could know it once more.

"Ye can't look at yer stockin' yit," said Aunt Deel when I came downstairs about eight o'clock, having slept thru chore time. I remember it was the delicious aroma of frying ham and buckwheat cakes which awoke me, and who wouldn't rise and shake off the cloak of slumber on a bright, cold winter morning with such provocation?

"This ain't no common Chris'mas—I tell ye," Aunt Deel went on. "Santa Claus won't git here short o' noon I wouldn't wonder—ayes!"

"By thunder!" exclaimed Uncle Peabody as he sat down at the table. "This is goin' to be a day o' pure fun—genuwine an' uncommon. Take some griddlers," he added as three or four of them fell on my plate. "Put on plenty o' ham gravy an' molasses. This ain't no Jackman tavern. I got hold o' somethin' down there that tasted so I had to swaller twice on it."

ABOUT eleven o'clock Uncle Hiram and Aunt Eliza and their five children arrived with loud and merry greetings. Then came other aunts and uncles and cousins. With what noisy good cheer the men entered the house after they had put up their horses! I remember how they laid their hard, heavy hands on my head and shook it a little as they spoke of my "stretchin' up" or gave me a playful slap on the shoulder—an ancient token of good will—the first form of the accolade, I fancy. What joyful good humor there was in those simple men and women!—enough to temper the woes of a city if it could have been applied to their relief. They stood thick around the stove warming themselves and taking off its griddles and opening its doors and surveying it inside and out with much curiosity.

Suddenly Uncle Hiram tried to put Uncle Jabez in the wood-box while the others laughed noisily. I remember that my aunts rallied me on my supposed liking for "that Dunkelberg girl."

"Now for the Chris'mas tree," said Uncle Peabody as he led the way into our best room, where a fire was burning in the old Franklin grate. "Come on, boys an' girls."

What a wonderful sight was the Christmas tree—the first we had had in our house—a fine spreading balsam loaded with presents! Uncle Hiram jumped into the air and clapped his feet together and shouted: "Hold me, somebody, or I'll grab the hull tree an' run away with it."

Uncle Jabez held one foot in both hands before him and joyfully hopped around the tree.

THESE relatives had brought their family gifts, some days before, to be hung on its branches. The thing that caught my eye was a big silver watch hanging by a golden chain to one of the boughs. Uncle Peabody took it down and held it aloft by the chain, so that none should miss the sight, saying:

"From Santa Claus for Bart!"

A murmur of admiration ran thru the company which gathered around me as I held the treasure in my trembling hands.

"This is for Bart, too," Uncle Peabody shouted as he took down a bolt of soft blue cloth and laid it in my arms. "Now there's somethin' that's jest about as slick as a kitten's ear. Feel of it. It's for a suit o' clothes. Come all the way from Burlington."

"Good land o' Goshen! Don't be in such a hurry," said Aunt Deel.

"Sorry, but the stage can't wait for nobody at all—it's due to leave right off." Uncle Peabody remarked as he laid a stuffed stocking on top of the cloth and gave me a playful slap and shouted: "Getap. You've got yer load."

I moved out of the way in a hurricane of merriment. It was his one great day of pride and vanity. He did not try to conceal them.

The other presents floated for a moment in this irresistible tide of laughing good will and found their owners. I have never forgot'en how Uncle Jabez chased Aunt Minerva around the house with a wooden snake cunningly carved and colored. I observed there were many things on the tree which had not been taken down when we younger ones gathered up our wealth and repaired to Aunt Deel's room to feast our eyes upon it and compare our good fortune.

The women and the big girls rolled up their sleeves and went to work with Aunt Deel preparing the dinner. The great turkey and the chicken pie were made ready and put in the oven and the potatoes and the onions and the winter squash were soon boiling in their pots on the stove-top. Meanwhile the children were playing in my aunt's bedroom and Uncle Hiram and Uncle Jabez were pulling sticks in a corner while the other men sat tipped against the wall watching and making playful comments—all save my Uncle Peabody, who was trying to touch his head to the floor and then straighten up with the aid of the broom-stick.

By and by I sat on top of the wood with which I had just filled the big wood-box and very conscious of the shining chain on my breast. Suddenly the giant, Rodney Barnes, jumped out of his chair and, embracing the wood-box, lifted it and the wood and me in his great arms and danced lightly around a group of the ladies with his burden and set it down in its place again very gently. What a hero he became in my eyes after that!

"If ye should go off some day an' come back an' find yer house missin' ye may know that Rodney Barnes has been here," said Uncle Hiram. "A man as stout as Rodney is about as dangerous as a fire."

Then what Falstaffian peals of laughter!

In the midst of it Aunt Deel opened the front door and old Kate, the Silent Woman, entered. To my surprise, she wore a decent-looking dress of gray homespun cloth and a white cloud looped over her head and ears and tied around her neck and a good pair of boots.

"Merry Chris'mas!" we all shouted.

She smiled and nodded her head and sat down in the chair which Uncle Peabody had placed for her at the stove side. Aunt Deel took the cloud off her head while Kate drew her mittens—newly knitted of the best yarn. Then my aunt brought some stockings and a shawl from the tree and laid them on the lap of old Kate. What a silence fell upon us as we saw tears coursing down the cheeks of this lonely old woman of the countryside!—tears of joy, doubtless, for God knows how long it had been since the poor, abandoned soul had seen a merry Christmas and shared its kindness. I did not fail to observe how clean her face and hands looked! She was greatly changed.

SHE took my hand as I went to her side and tenderly carressed it. A gentler smile came to her face than ever I had seen upon it. The old stern look returned for a moment as she held one finger aloft in a gesture which only I and my Aunt Deel understood. We knew it signalized a peril and a mystery. That I should have to meet it, somewhere up the hidden pathway, I had no doubt whatever.

"Dinner's ready!" exclaimed the cheerful voice of Aunt Deel.

Then what a stirring of chairs and feet as we sat down at the table. Old Kate sat by the side of my aunt and we were all surprised at her good manners.

Uncle Jabez—a member of the white church—prayed for a moment as we sat with bowed heads. I have never forgotten his simple eloquence as he prayed for the poor and for him who was sitting in the shadow of death (I knew that he referred to Amos Grimshaw and whispered amen) and for our forgiveness.

WE JESTED and laughed and drank cider and reviewed the year and ate as only they may eat who have big bones and muscles and the vitality of oxen. I never taste the flavor of sage and currant jelly or hear a hearty laugh without thinking of those holiday dinners in the old log house on Rattle-road.

Some of the men and two of the women filled their pipes and smoked while the dishes were being picked up and washed. By and by the men and the big boys went with us down to the brook where we chopped holes in the ice to give the sheep and the cattle a chance to drink. Then they looked at the horses.

"Peabody you mus' be gittin' rich," said Hiram Bentley.

"No I ain't. I've had to give up here, but a little windfall come to us t'other day from an old uncle in Vermont. It ain't nothin' to brag of, but it'll give us a start an' we thought that while we had the money we'd do somethin' that we've been wantin' to do for years an' years—give a Chris'mas—an' we've done it. The money'll go some way an' we may never have another chance. Bart is a good boy an' we made up our minds he'd enjoy it better now than he ever would ag'in."

That Christmas brought me nothing better than those words, the memory of which is one of the tallest towers in that long avenue of my past down which I have been looking these many days. About all you can do for a boy, worth while, is to give him something good to remember.

The day had turned dark. The temperature had risen and the air was dank and chilly. The men began to hitch up their horses.

"Kind o' thawin' a little," said Uncle Hiram as he got into his sleigh and drove up to the door. "Come on, there. Stop yer cacklin' an' git into this sleigh," he shouted in great good humor to the women and children who stood on the porch. "It'll be snowin' like sixty 'fore we git home."

So, one by one, the sleighloads left us with cheery good-bys and a grinding of runners and a jingling of bells. When the last had gone Uncle Peabody and I went into the house. Aunt Deel sat by the stove, old Kate by the window looking out at the falling dusk. How still the house seemed!

"There's one thing I forgot," I said as I proudly took out of my wallet the six one dollar bills which I had earned by working Saturdays and handed three of them to my aunt and three to my uncle, saying:

"That is my Christmas present to you. I earned it myself."

I remember so well their astonishment and the trembling of their hands and the look of their faces.

"It's grand—ayes!" Aunt Deel said in a low tone.

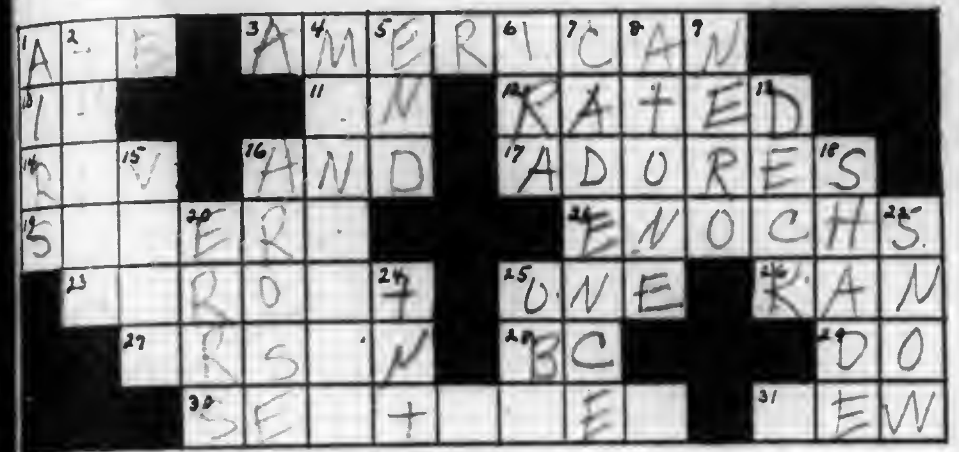
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 31 (across) is DEW and 15 (down) is VEDA. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

She rose in a moment and beck-ned to me and my uncle. We fol-wed her thru the open door to the her room.

"I'll tell ye what I'd do," she hispered. "I'd give 'em to ol' Kate —ayes! She's goin' to stay with us ll tomorrow."

"Good idee!" said Uncle Peabody.

So I took the money out of their nds and went in and gave it to the lent Woman.

"That's your present from me," I id.

How can I forget how she held my m against her with that loving, miliar, rocking motion of a woman ho is soothing a baby at her breast d kissed my coat sleeve? She re-ased my arm and turning to the indow, leaned her head upon its ll and shook with sobs. The dusk ad thickened. As I returned to my t by the stove I could dimly see r form against the light of the indow. We sat in silence for a little hile.

Aunt Deel broke it by singing in low tone as she rocked:

y days are passing swiftly by
And I—a pilgrim stranger—
ould not detain them as they fly,
These days of toil and danger."

Uncle Peabody rose and got a ndle and lighted it at the hearth.

"Wal, Bart, we'll do the chores, ' then I warn ye that we're goin' have some fun," he said as he got s lantern. "There's goin' to be me Ol' Sledge played here this enin' an' I wouldn't wonder if ate could beat us all."

I held the lantern while Uncle eabody fed the sheep and the two ws and milked—a slight chore ese winter days.

"There's nothing so cold on earth s a fork stale on a winter night," e remarked as he was pitching the ay. "Wish I'd brought my mittens."

"You and I are to go off to bed rly," he said as we were going back to the house. "Yer Aunt Deel wants to see Kate alone and git her to talk if she can."

Kate played with us, smiling now and then at my uncle's merry ways and words, but never speaking. It was poor fun, for the cards seemed to take her away from us into other scenes so that she had to be reminded of her turn to play.

"I dunno but she'll swing back into this world ag'in," said Uncle Peabody when we had gone up to our little room. "I guess all she needs is to be treated like a human bein'. Yer Aunt Deel an' I couldn't git over thinkin' o' what she done for you that night in the ol' barn. So I took some o' yer aunt's good clothes to her an' a pair o' boots an' asked her to come to Chris'mas. She lives in a little room over the blacksmith shop down to Butterfield's mill. I told her I'd come after her with the cutter but she shook her head. I knew she'd rather walk."

He was yawning as he spoke and soon we were both asleep under the shingles.

I returned to Mr. Hacket's house late in the afternoon of New Year's day. The schoolmaster was lying on a big lounge in a corner of their front room with the children about him. The dusk was falling.

"Welcome, my laddie buck!" he exclaimed as I entered. "We're telling stories o' the old year' an you're just in time for the last o' them. Sit down, lad, and God give ye patience! It'll soon be over."

(To be continued next week)

When a colored couple were being married and the clergyman read the words, "love, honor and obey," the bridegroom interrupted:

"Read dat ag'in, parson; read dat oncet mo' so de lady kin ketch de full solemnity of de meanin'. I'se been married befo'."

A Hampton Roof Will Defy the Weather

Penco Hampton Metal is the greatest of all rust-resisting irons (not steel) and is made from a special formula that has proven its superiority over all others. We have made exhaustive tests for years; soil tests, acid tests, salt air tests and weather tests and know that in Hampton Metal we're offering you the best that money will buy; that is if you measure value by the number of years a roof will last.

For barns, sheds, pump and tool houses, in fact all farm buildings there is nothing else so good. It is fireproof, spark-proof and withstands the blistering sun, blustering winds, beating sleet and driving rains alike and, if properly grounded is one of the best lightning safeguards. Can be put on easily and quickly and may be had in all styles: corrugated, V-Crimp, Pressed Standing Seam, Imitation brick or stone, etc. Needs no paint.

If there's such a thing as roofing permanently it's with Hampton Metal

You owe it to yourself to know more about how metal is made and why some is better and lasts longer than others. If you wish to include measurments of any space you'd like to cover we'll be glad to figure it and give you a price, including nails, and washers, delivered right to your station.

PENN METAL COMPANY, 25th and Wharton Sts Philadelphia, Penna.

Send for Hampton Booklet and a sample of Hampton metal.

Riverside *Oversize Cord* Tires *and Tubes*

Read what the users say

Does a Riverside Cord last as long as *any* tire? Is it as good a tire as any tire made? Is it as well made as a tire can be made? Tens of thousands of users of Riverside tires answer enthusiastically—"Yes!"

Just forget that our prices are low. Compare quality, service, mileage—tire for tire, and Riverside Cords stand equal to the best. There is a big saving in price—and the quality, mileage, service is all that you get in any tire.

How our low prices are made

Riverside tires cost as much as other tires *to make*. You pay as much for fabric, rubber and labor. But you pay less profit. That is why Riverside prices are so much less. We are the largest retailers of tires in the world. We sell 5,000 to 6,000 tires per day. Riverside Tires are made in the best factories—on our specifications, under our supervision. We know their quality.

Greater Protection against Skidding

Big heavy blocks of *live* rubber and extra thick side studs and the husky ribs of Riverside Cords grab the slippery roads and are your greatest protection against skidding.

Riverside Cords are thus the safest tire, the most satisfactory tire and the most economical tire you can possibly buy. Why pay more?

For 53-years Ward's have sold "Quality" goods only—with a definite "Money Back" guarantee. The reliability of Montgomery Ward & Co. is beyond question. You can not buy a tire with a better guarantee.

"A pair of Riverside Cords have already given me one year's service on rough mountain roads, and they have never been off my car. You can't beat Riversides for good road service."
James A. Kipe,
Cascade, Maryland

"The Riverside Cords I bought last Summer show very little wear. High-priced tires put on my car at the same time are all gone. I tell my friends to use Riversides and get their money's worth."
Chas. F. Poor,
Danvers, Mass.

"A Riverside Cord on my Buick, with your heavy duty tube, has run 15 months, in use every day, and it still has in it the same air put in 15 months ago. 'That's going some'."
D. S. Robbins
Las Cruces, N. Mex.

PROVED SWEDISH TREATMENT STOPS ABORTION

Famous foreign treatment quickly relieves badly infested herds. Gives amazing results in cases owners believed hopeless. Formula available for every farmer.

Complete freedom from the ravages of the terrible abortion plague is now assured every worried farmer through a famous Swedish treatment. For many years it has been used with complete success in the old country, banishing this disease from whole dairy sections literally rotten with abortion.

After great expense of time and money the formula was reproduced and given to farmers in this country. History repeated itself. Herd after herd was rid of this disease. Even cows considered hopeless were restored to health and produced fine, sturdy calves.

Saved Every Calf

Frank H. Halfman, Crown Point, Ind., is one of hundreds of grateful users, he says: "Two years ago for a period of three months I lost every calf in my herd of forty cows. All abortion remedies failed. I was desperate. I heard of your C. C. C. treatment, used it and have never lost a calf since. It completely stopped my abortion troubles."

For nine years the fame of this easily given treatment has spread from breeder to breeder. Today it is distributed on an absolute binding guarantee that it will stop every case of abortion; that every cow treated will deliver a normal calf or the treatment cost is refunded. Such a broad guarantee is possible only because C. C. C. is practically 100% successful.

Send No Money

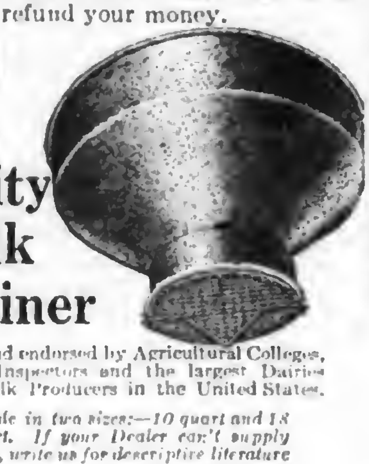
Mr. John W. Froberg, who is a native of Sweden and is responsible for introducing this treatment in the U. S. A. will gladly send every farmer troubled with abortion full information about it. Don't send any money—just your name and address to Froberg Remedy Co., 16 Lincoln St., Valparaiso, Ind. Full details will be mailed you without any obligation. Read the wonderful true story of C. C. C. You will be surprised how easy it is to treat your herd, how little it costs, how quickly you get results.

Your Guarantee!

Clean Milk

—and we prove it by actual test to your entire satisfaction. You won't find any dirt or sediment in milk after it has been through a Dr. Clark Purity Milk Strainer. The thick discs of sterilized cotton, tightly clamped to bottom of strainer, successfully remove every particle of dirt, dust, muck and other sediment. We positively Guarantee those results or refund your money.

Dr. Clark's **Purity Milk Strainer**



Used and endorsed by Agricultural Colleges, Dairy Inspectors and the largest Dairies and Milk Producers in the United States.

Made in two sizes:—10 quart and 18 quart. If your Dealer can't supply you, write us for descriptive literature and prices, giving your dealer's name.

PURITY Cotton Discs are made in any size from 5 1-2 in. to 7 in. diam., for all makes of strainers or filters. Send for a trial order.

County Notes

Adams County, Pa.—Weather for the past month has been good for starting along the work but too warm for the fruit trees which have begun to push the buds a little; this is giving the growers considerable concern as it is fully two weeks earlier than normal, with the possible danger of later frosts. Excellent weather for wheat and grass fields which is showing up good. Sales are in full swing with prices high for quality stuff. Good 100-pound shoats around $15. Roads in good condition for March; most of them have been dragged. Prices: wheat, $1.68; corn, $1.50; oats, 60c; milk, 4 per cent, $2.30; eggs, 23c.—A. R., March 17.

Armstrong County, Pa.—The first ten days of March were full-fledged lions. The alternative freezing and thawing of the latter half of February and first half of March hve thoroly browned the wheat and rye and heaved the clover somewhat. Not all our people use lime-sulphur as a dormant spray in orchards, but some use the miscible oils with seemingly equally good results. Potatoes, corn and oats areas to be planted this spring will be less than last. Butter has advanced; that of good quality will bring 50c; eggs are plentiful; potatoes, $1 bu. Wheat and corn fluctuate, there being a change of 10c bu. from one day to the next. No public sales. All industrial plans operating on a restricted basis.—W. M. P., March 13.

Butler County, Pa.—February ended under a spell of exceedingly cold weather, ushering in March under the same conditions. Eggs are plentiful but the prices on grain and feed discouraging to poultry raisers. This indicates less poultry and high prices next fall and winter. Much idle land in this section. Pork high and scarce. Few sales and not much change either on or off the farms at present.—F. E. P., March 17.

Carbon County, Pa.—Moderate weather has again set in; bluebirds made their first appearance on March 4. Farmers are busy pruning trees, cutting wood, hauling logs, and getting ready for the rush of spring work. Several miles of new concrete highway will be built between Harrity and Kresgeville, thus adding another section to the Mauch Chunk to Stroudsburg route. Carbon County Pomona Grange will meet in Big Creek Grange Hall on March 21. Chickenpox and similar diseases prevalent at present. Hay, $20 ton; oats, 80c; corn, $1.75; chickens, 25c; eggs, 38c; butter, 45c.—L. E. B., March 12.

Clinton County, Pa.—Our songbirds are here; grass is beginning to show its color; wheat fields looking fairly good. Manure hauling and wood sawing in full swing. Very little plowing done. Farmers attending public sales. Prices on horses, cattle, and machinery fair to good, according to condition. Dairy products bringing better prices since two firms have located in our territory, buying whole milk. Farmers contemplate increasing their herds. J. B. McCool, county extension representative, is holding meetings thruout the county, planning experiments on different varieties of grains, potatoes, and forming girls' and boys' clubs. Eggs plentiful at 25c; butter, 40c. All kinds of feeds advancing; some horses dying. Contagious diseases diminishing.—W. C. W., March 14.

Cumberland County, N. J.—This county now has a live and growing vegetable growers' association which has been organized for the purpose of holding educational meetings. The onion growers have about completed putting out their sets. The acreage for the present year was somewhat limited on account of the price and quality of sets which are very uniform and sell for $5 a bushel. The peach growers have applied their first spray, as the buds are now quite swollen. The Vineland Egg Laying Contest is to undergo a complete renovation and will start November 1, 1925, with the houses repaired, new concrete floors and with the yards planted in alfalfa and all new fences.—L. V. S., March 18.

Greene County, Pa.—We have all the signs for an early spring. Robins, bluebirds and pewees are here. Farmers are plowing for corn and oats every day the weather permits. About the usual acreage will be planted. Corn getting scarce. Will have enough hay to feed thru. All kinds of grains very high. Grain and flour highest in years. Very poor prospects for a wheat crop. Most fields look bare. Much drilling for oil and gas. Some wells produce from two to three and one-half million cubic feet per day.—C. M. K., March 16.

Lebanon County, Pa.—The wild geese are letting us hear that they are going northward and the robins and some sparrows are here. The clover in the new fields is very thick and fine. Wheat does not look so good. The ground has been too soft for weeks to get the most of the manure hauled. Many are on the point of moving. Our tobacco growers are saying that they have heard that something like 15c is being talked about by purchasers. None has been shipped from here yet. A 200-pound calf of [illegible] weeks brought $25 at the local yard. The egg market is enacting sort of a [illegible] dozen" stunt here. From [illegible] and they dropped to 28c, then [illegible] here, then they went up to 26c. At [illegible]

(Continued on page 29)

Reliable Day-Old Chick Hatcheries

Embargo Does Not Prevent Shipment of Day-Old Chicks

SHIPPERS and buyers of day-old chicks will be glad to know that embargoes on poultry placed because of the poultry influenza do not apply to shipment of day-old chicks when placed in new or disinfected containers. Parcel post shipments are in no way affected by state embargoes. There is no reason to believe that the disease can be spread thru shipment of day-old chicks.

Raise Chicks to Make Money

1925 promises to be a great year for chickens—layers are scarce, work is plentiful, folks have money to spend and living is going higher.

There is always ready sale for fresh eggs and home-dressed fowl, higher than market prices. Cooley's chicks will be laying five months after their arrival. My strains of Leghorns are truly remarkable layers.

Cooley Chicks are the Healthiest, Most Vigorous, Desirable Chicks Hatched. They Always Satisfy.

50,000 customers know these facts.

Write today for
COOLEY'S NEW CHICK BOOK
and chick prices.

It's the most interesting book of the year for those who have room for as few as a dozen laying hens and also contains much helpful information for the oldest and largest poultry keeper.

Markets

PHILADELPHIA MARKETS

March 23, 1925.

PRODUCE

With the advancing spring season, supplies of nearly all kinds of vegetables are becoming more and more plentiful on our market. Of course some of the early spring vegetables are still in light supply, such as beans, cucumbers, eggplants, peas, peppers and new potatoes, and such are still bringing high prices. There were fairly liberal offerings of apples for the season of the year on our market this week, but prices held very firm. Asparagus is still in light supply but gradually getting heavier. Cabbage has been in quite heavy supply and very low prices have been prevailing, but there is now a firmer tone to the market. Onions are practically unchanged. New potatoes are still in light supply, altho slowly increasing and good prices are still prevailing; old potatoes, on the other hand, are slow and dull. Sweet potatoes are moving slowly at practically unchanged values.

Vegetables—ASPARAGUS, Calif, doz bchs, $4.50@10; So Carolina, doz bchs, $3.50@8. BEANS, green, Fla, hmpr, $5@8; poor, $2.50@4; wax, Fla, hmpr, $5@6.50; poor, $2.50@3.50. County Notes

(Continued from page 26)

corn on the cob brought $1.70, buyer his own carter; weight, seventy pounds to a bushel.—R. I. W., March 16.

McKean County, Pa.—A few farmers are making maple syrup, having had one good run so far. More men than usual looking for work and some will accept farm work, which seems to spell, "jobs are scarce." The demand for fresh cows seems to be good. Hens are not lying down on the job, but are laying. Prices: eggs, 30c; potatoes, 75c; hay, $20; buckwheat, $2 cwt.—F. J. H., March 16.

Mifflin County, Pa.—Weather fair and much like spring except the last few days. A little cooler and ground freezing during the night. Had a fine rain last week which settled in the ground and put the roads in a better condition for traveling, and with a few more warm days some fields will be ready for the plow. Farmers hauling manure, some dragging the clay roads and attending sales. Almost everything is selling rather low or under value. Instead of making butter most farmers are selling milk; they get $2.50 for four per cent milk. Our dealers shipped a load of cows a few weeks ago. There are plenty for sale but are in poor condition because of being too poorly fed. Markets are: wheat, $1.75; corn, $1.20; oats, 65c; potatoes, 75c; apples, $1.25@1.50; butter, 50c; eggs, 25c; lard, 18c.—J. H. B., March 16.

Northumberland County, Pa.—March weather very changeable. So far the wheat has withstood the winter, tho much depends on the present month. Fewer farm sales than for several years. Prices in general good, especially on cows and machinery. Interest in t. b. work in the county is growing. Four townships are signed up and meetings are being held in three others. Quite a few farmers are going back to the Dairymen's League again. Prices: three per cent milk, $2; eggs, 22c; pork, 16c; oats, 55c; corn, $1.25; hay, $15; labor, $30@50 per month.—W. C. G., March 16.

Union County, Pa.—Farm sales are taking most of the farmer's time these days. At Clayton Hackenberg's sale his grade cows averaged $90, and only a few of them were fresh. Clover seed will soon be sown, but the soil is too wet to haul out manure, and no plowing has been done, except on sandy or gravel soils. Cows and shoats are selling too high at sales, considering the cost of labor, feed and the prices received for milk and pork. Hens are selling at sales for 30c a pound to be shipped to market.—J. N. G., March 17.

Warren County, N. J.—March landed a little rough with zero temperature the first three days. We have had considerable rain and with the snow the roads have been almost impassable. The wheat and rye apparently have wintered well and with the milk situation considerably improved, the farmers feel quite optimistic. Feed prices generally are unchanged, excepting bran, which has dropped $2 a ton. Wheat, $1.80; rye, $1.20; eggs, 26c; creamery butter, 52c; dairy butter, 41c.—A. S. P., March 16.

Wayne County, Pa.—A committee of farmers and merchants was recently appointed to represent growers interested in marketing apples and potatoes for central Wayne County, with headquarters at Honesdale. This committee representing both farmers and business men is composed of Bert S. Hull, Waymart; D. M. Eno, Honesdale; Roy Bayley, Honesdale, and L. C. Weniger, Honesdale. These men are representatives of the Agricultural Extension Association, the Farm Bureau, the grocerymen, and the Chamber of Commerce, respectively. It is their job to work out an acceptable means of marketing apples and potatoes.—E. B. C., March 10.

Lancaster Tobacco News

THE last two months' steady movement of the 1924 crop of tobacco is beginning to show it's first signs of letting up. Prices have held firm at about 16@17c per pound, altho some of the poorer crops have been sold at 12@13c recently. It is estimated that about seventy per cent of the 1924 crop of cigar leaf has been sold by the growers.

The sale of twenty acres of tobacco by L. Creamer, a grower near Lancaster, to a western packer for 19c marks what is believed the high point in the recent buying movement. Deliveries are very heavy, and all city and county warehouses are taxed to capacity.

With the 1925 growing season already in prospect, growers are showing a strong preference for the Hibshman variety of cigar leaf tobacco, developed by E. K. Hibshman, of State College, and Otto Olson, federal tobacco investigator.—Garden Spot Farmer

What is the Price of the Genuine NEW IDEA SPREADER?

Why has NEW IDEA led the field for 25 Years?

Why are many other spreaders like NEW IDEA in General Appearance?

What about Factory Facilities? Financial Strength? Reputation?

What about Repairs? Service? Guaranty? Do my neighbors own NEW IDEAS? Who is the Nearest Dealer?

These are the Facts You Need —before Buying Any Spreader!

WHEN you choose your spreader, make sure you get *the most for your money!* Get efficiency, light draft, greatest possible strength. Get a *guaranteed* spreader—backed by an organization that knows how to build extra quality in this vitally important farm implement—and which has the facilities and sales outlet for big volume production and bed rock price.

Get the facts—today—from New Idea! Find out why the original wide-spreading spreader has never lost the lead since Joseph Oppenheim invented the now famous New Idea Distributor—25 years ago. Please write—or mail the coupon.

THE E-B LINE

E-B Osborne Binders Get All the Grain

On thousands of farms in all parts of the world E-B Osborne Grain Binders are helping to make greater profit. You can depend on them to harvest tall or short grain and get it all.

All the latest improvements are embodied in the E-B Osborne Binder. Cutter bar can be run close to ground to pick up down grain; reel is easily adjusted with a range from 4 to 34 inches above guards; an extra wide throat to grain deck and extra roller prevent clogging; binding mechanism is perfect and always performs; roller bearings are used in all important places. The enviable reputation that the Osborne Binder has for efficient service and long life, is its greatest recommendation. Furnished for either horses or tractor.

E-B Osborne Corn Binder is just as dependable as the grain binder. It runs without side draft and gathers all the stalks, whether tall, short or down. Has a binding range from 18½ to 30½ inches from butts. For short corn and milo maize we build a special short corn binder with a range from 12½ to 23 inches.

Get our free booklet describing E-B Osborne Harvesting Machines. And remember, whatever farm machine you need, you will find it in the E-B Quality Line.

York's Vegetable Imports

THE carlot receipts of fruits and vegetables in York decreased ten per cent during 1924, as shown by the comparison of 610 cars for the year just past with 678 cars in 1923, according to a report of the Pennsylvania Bureau of Markets. In addition to the receipts by rail, large amounts of many fruits and vegetables were raised in York County and marketed thru wholesalers, retailers and direct to consumers in the several farmers' markets.

Forty per cent of the total receipts, or 256 cars, consisted of mixed produce. Practically all of these were made up in Baltimore and shipped to York wholesalers. Approximately the same number of bananas came into the city in 1924 as in 1923. The port of Baltimore furnished ninety-nine of the 121 cars, with the remainder from the Philadelphia and New York wharves.

Watermelons followed with sixty-one cars, fifty per cent more than in 1923. Georgia and South Carolina supplied most of this business. Forty-six cars of oranges came in during the year, the majority from Florida.

Imports Early Potatoes Only

Potatoes were next in importance with 43 cars, 80 per cent more than in 1923. This large increase was due almost entirely to heavier receipts of early potatoes from Virginia and states further south. This early stock formed about three-fourths of the total potato receipts. No potatoes arrived on the market in carlots after September first, for York County itself is a large producer, having raised over a million and a quarter bushels last year, and has shipped by rail between 200 and 300 cars during each of the past two years.

The total carlot receipts of fruits and vegetables in York during 1924 are as follows: Mixed produce, 256; bananas, 121; watermelons, 61; oranges, 46; potatoes, 43; cantaloupes, 23; peaches, 22; apples, 8; cabbage, 7; sweet potatoes, 5; grapefruit, 4; grapes, 4; celery, 3; pineapples, 3; lettuce, 2; lemons, 1. Total, 610 cars.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

IMPURE BLOOD—SORE SHOULDERS.—I have a horse which must have impure blood, because when worked his shoulders get sore and bleed. His blood is dark colored and too thick.—I. C. M., Stoyestown, Pa. Doubtless your horse would be benefited by a change of feed and if you have roots, feed some to him once a day. Groom him well once a day. Give him one-half ounce of Donevan's solution of arsenic at dose in feed or in drinking water two or three times a day. Dissolve one ounce acetate of lead, one dram tannic acid in one quart of clean cold water and apply to sore shoulders three times a day. Select for your horse a nice fitting collar and keep it very clean and dry.

LICE—ABORTION.—Several of my cows are troubled with lice, causing them to rub themselves. Three of my cows calved too soon, failed to clean and they are not thrifty. Kindly tell me how to prepare kerosene emulsion. Have six cows which carried their calves full time. Two of the three cows which miscarried hurt themselves.—R. M., Wellsboro, Pa. Kerosene emulsion is made by dissolving two pounds of soft soap in two pints of boiling water and adding one pint of kerosene. This mixture should be churned or stirred violently and three quarts of water added to it before using. Clip this out. Pure kerosene is too strong and causes loss of hair. Breed cows again.

COW GIVES BLOODY MILK.—My fresh cow gives some bloody milk from one quarter. What can be done for her?—I. C., Laurelton, Pa. A small quantity, even a few drops of blood will color quite a quantity of milk a pink color, but it does no harm. Rough milking is a common cause; besides the cow's udder occasionally comes in contact with hard substances, or she may receive a blow. Apply cold water, after milking her.

ABORTION.—Have a cow that has had three calves and dropped them all before time. She is a fine cow, it's almost impossible to dry her. Shall I fatten her for butcher?—C. B. J., Bethel, Pa. Milk her until it is unprofitable, then fatten her. Abortion vaccine is a proper remedy for this cow, but it should be applied before she is bred, and if you decide to keep her have your veterinarian use abortion vaccine (living cultures) and you may look for fairly good results.

THICK STRINGY MILK.—Have a cow that gives thick ropy or stringy milk and I have another cow that has warts on her teats. We also have another cow which calved too early. We are having our cows tested for tuberculosis. The cow which miscarried was kept with bull and he was ugly to her; this may account for her ailment.—N. M., Lewiston, Pa. Your cow suffers from garget. Apply camphorated oil to udder twice a day; give her one-half ounce of fluid extract of phytolacca in soft feed three times a day. Every wart that has a neck should be clipped or cut off, then apply olive oil to flat ones twice a day. Doubtless your cow met with an injury which caused her to miscarry.

SARCOMA.—I have a Collie dog ten years old that has bunch on top of head which is steadily growing larger and another bunch is developing between the eyes, this bunch is very painful.—M. V., Edinboro, Pa. The writer is inclined to believe your dog suffers from sarcoma and is incurable. His age is against him, besides he now has little value, therefore it will not pay you to employ an expensive veterinarian to operate on him.

FITS.—I have a hound pup about nine months old which has grown and thrived fine until about two weeks ago; since then he has been having fits, which last about twenty minutes. These fits develop quickly, he suddenly starts to run and bark.—H. E. G., Hollidaysburg, Pa. Fast him for fifteen or twenty hours and then give him from fifteen to thirty drops of equal parts of fluid extract of spigelia and fluid extract of senna every morning until three doses have been given. He has what is called "worm fits."

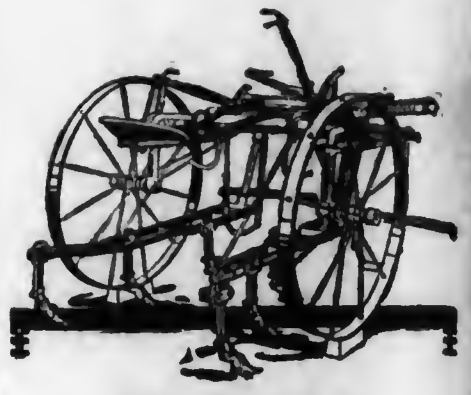
Treatment for Turkey

I am asking relief for a turkey gobbler which has a soft lump running from below eye forwards to the bill on one side; other side is all right. Dipped head in roup solution without results.—W. D. C., Berks County, Pa.

Open the soft lump with a sharp knife or safety razor blade and drain out the accumulation of liquid material. Wash the wound with a mild disinfectant and healing will soon result. Sometimes several [illegible] may be necessary to complete the healing process.—R. G. K.

"Your medicine has helped me wonderfully," wrote the grateful woman. "A month ago I could not spank the baby and now I am able to thrash my husband. Heaven bless you."

"Pull" helps the man who has to be dragged. It is of no use to a pusher



Makes a Clean Sweep

Shovels of the John Deere "KC" Cultivator penetrate level and work uniformly at depth set.

They always point straight to the front—always cut out full width—no skips and jumps—all the soil is worked uniformly.

You can make every adjustment from the seat, with handy levers.

Easy guide for crooked rows—light pressure on foot levers guides wheels and shifts rigs.

See the "KC" at your John Deere dealer's. Write for free folder. Address John Deere, Moline, Illinois; ask for folder HK-636

Super Zinc-ed WIRE FENCES

Super-Zinced Fences are armored against rust by the heaviest coating of zinc that can be successfully applied to wire. By our improved process the zinc is so closely bonded to special-formula steel wire that it will not crack or peel.

You now get Super-Zinced rust protection in both *Columbia Hinge-Joint and Pittsburgh Perfect Stiff-Stay Fences*, made in standard farm and poultry styles, and in our superb and distinctive lawn fences. They are sold by a dealer near you.

Send for our catalog giving full information about these long-life fences; we also send you a valuable vest-pocket book containing pages for farm accounts, live stock and crop records, seeding information, etc., both sent *free*.

PURE IRON ARMCO NOT STEEL

"Keep Up the Good Work"—with BUCKEYE CULTIVATORS

SUPERIOR and Buckeye—profit-mates for every farmer. Just as Superior Seeding means the right start for every plant, Buckeye Cultivation insures good root growth and healthy crop development.

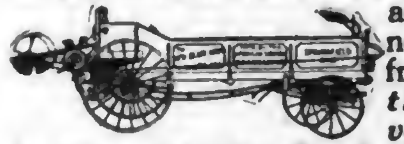
The Buckeye Line includes *One* and *Two-Row*, Horse and Tractor, Walking and Riding Cultivators. And all

BUCKEYE CULTIVATORS

are notable for simplicity, remarkable strength, and extreme ease of handling. These implements of true Superior quality are very light of draft, unusually flexible, and exceptionally well balanced.

For doing a thorough job of cultivating of any row crops—for easy, comfortable operation—and for long years of service—let your choice be Buckeye. Prices, catalog, and full information on request. Write or simply mail the coupon.

Black Hawk Manure Spreader



A Manure Spreader of Superior quality. Scientifically designed and sturdily built. Has a strong and positive feed, does not choke and is free from cog gearing. ***Get the full fertilizing value of the manure by using the New Black Hawk 40A.*** It thoroughly pulverizes and spreads manure widely and evenly in a great range of quantities. Lightest draft, simplest construction, easiest to operate. A Two-horse Spreader. Does a perfect job on hillsides and level ground. Write for full details.

Superior Lime Sower

For perfect spreading of Lime there is no better machine built than the ***Superior Lime Sower.*** Built low for easy loading. No cogs or gears to break or get out of order. Smooth, steady feed. Adjustable for spreading 300 to 6,000 pounds per acre. Sows damp lime as well as dry, without clogging. Handles all kinds of commercial fertilizer. Has a 10 bushel hopper capacity and can be used back of team or tractor. Mail coupon or write for details.

Get the whole story of Superior quality. Check on the coupon the implements you are interested in—or write for circular and valuable booklet "Drilling for Gold."

CAMBRIA FENCE

A Product of Long Experience in Fence Making

WIRE fencing has been made for many years at our Cambria Plant. Steel-making experience at the same plant overs a period of more than sixty-five years.

The control of all of the steps of steel production and fence manufacture in one organization assures a uniform standard of high quality.

Every care is taken to maintain the high grade of CAMBRIA FENCE—in the production and selection of the steel going into it; in the rolling and drawing of the wire; in the final inspection of the fence.

There is a style of CAMBRIA FENCE to meet any requirement of the user of field fence. You can depend on uniform construction, uniform quality, and uniform long life to each kind.

Ask your Dealer for CAMBRIA FENCE

Other Bethlehem Wire Products include: Fence Staples; Wire Nails; Barbed Wire; Plain Wire; Galvanized Wire; Bale Ties; Barbless Twisted Wire.

Get the Complete Story of CENTAUR TRACTORS

WRITE today for full information regarding this sturdy, compact "power plant on wheels" which is making farm work easier—more pleasant and more profitable—on farms in every section of the country. Just mail the coupon or drop us a postal for catalog which tells the complete story of this truly remarkable low-cost, small-size, big-job tractor.

There is almost no limit to the jobs the sturdy CENTAUR can handle. It will plow 7 inches deep in heavy sod. On a small farm it will handle all of the field work—plowing, harrowing, seeding, cultivating, mowing, etc. Unequalled for cultivating corn—either over the row or between the rows.

Air-Cooled "New Way" Motor, Hyatt Roller Bearings, Bosch Magneto—a reverse enabling the CENTAUR to back under its own power—these are a few of the many features which make the CENTAUR *a stay-on-the-job profit-maker on both large and small farms.*

What Cooperation Can Do

Jardine Says It Will End Hit or Miss Farming

"COOPERATION among farmers, properly carried out, will accomplish precisely what farming most needs. It will iron out the peaks and valleys in the agricultural market. It will go far toward securing a constant market at a constant price, giving to agriculture definite permanence in a business way.

"If applied in the right way, cooperation can make of American farming a big, voluntarily unified, permanently and dependably profitable business, in a way that no paternalistic legislation could possibly do. The government can aid in developing cooperation, in providing a voluntary clearing house for cooperative organizations. It can, in other words, simply help the farmer to help himself.

Will Mean Balanced Production

"Thru cooperative organization farmers can ascertain the demand for each important farm product—first the American demand, then the foreign demand. In the case of products of which more can be produced than the American market calls for, they can find out whether they can produce for the foreign market at a profit in competition with the farmers of other countries.

"They can select the proudcts that they can so produce, and grow them for the export trade. The farmers' own representatives will give them the data that will enable them to decide what to grow and when and how to grow it. This will not mean the elimination of any acreage, but a better balancing of the farm acreage among different products.

Takes Gambling out of Farming

"The important thing about a program of this sort is that it takes time by the forelock. It does what a prudent man always endeavors to do in his own business. It gets information beforehand, rather than afterwards. It will put an end to hit-or-miss farming, which under present conditions every farmer has to practice more or less. It will take gambling out of farming—a thing for which good, sound farmers will be devoutly thankful.

"The development of cooperation to this extent will necessarily be slow. The development of any big business movement—any movement that really counts permanently—is slow. The ultimate success of the cooperative movement will depend on farmers' confidence in each other, on the laying out of a careful program, and on the selection of capable, dependable leadership.

"Once the movement is thoroly developed, the individual farmer will not have to worry about selling problems. He will be free to devote his managerial ability to production and raise this to the most profitable point."—Secretary of Agriculture Jardine in The Nation's Business.

Alfalfa's Soil Requirements

Please write me how to start a piece of alfalfa. Is there danger of putting on too much manure, so that weeds will come up and choke it out?—A. L. F., Bradford County, Pa.

Successful alfalfa growing presupposes land that is well drained, a seed bed relatively free from weeds, a supply of lime sufficient to prevent the development of excessive acidity, a fertilizer to provide available phosphoric acid and potash that may be needed by the crop and seed with a high germination coefficient and reasonably free from weed seeds. Where alfalfa is grown for the first time the factor of inoculation should also be provided for.

For practical purposes alfalfa may be made to follow a tilled crop which is removed sufficiently early in the summer to permit the preparation of the seed bed. A crop like early potatoes or sweet corn would lend itself for the purpose. Alfalfa may also be sown after oats or oats and Canada field peas.

Fall or Spring Seeding?

Fall seeding is usually more successful in the coastal section of the Middle Atlantic States. Farther north or for higher levels spring seeding is often as successful, if not more successful, than fall sowing. Much will depend on the type of soil, the drainage and the exposure.

Assuming that the fall seeding is to be made, it would be desirable to plow the land at the end of June or early in July, if practicable, to lime the plowed land, summer fallow, and to apply 300 to 500 pounds of a commercial fertilizer containing an equivalent of about 250 to 400 pounds of acid phosphate and of 50 to 100 pounds of muriate of potash per acre.

The seeding itself may be done from about the middle of August to the first of September, depending on the locality. Ordinarily, 20 to 25 pounds of seed per acre are recommended. The seed may be sown by means of a wheelbarrow seeder or a suitable drill.

There is some objection to the use of too much barnyard manure, since this will encourage the growth of weeds. However, the manure may be spread on the land before it is plowed, and, if the plowed ground is summer-fallowed for a period of a month or so, most of the weeds will be gotten rid of and a reasonably good seed bed secured.

Copies of circulars on the growing of alfalfa may be obtained from the Pennsylvania Experiment Station, State College, Pa.; New York Experiment Station, Ithaca, New York; New Jersey Experiment Station, New Brunswick, New Jersey.—J. G. L.

Old Folks Enjoy Radio

WE SURELY feel lost when our radio set is out of order. We like both popular and classical music when the notes ring out clear and sweet, but we very much dislike the high, shrill, quavering music which most of the lady singers give us and the trilling music which many of the men give. We like the natural voice. As "Josh" says, "We don't like frills."

We like any kind of violin or other instrumental music which is slow enough to let the music out. Many of the fox trots are so fast that they sound much like tin pans banging.

We very much enjoy lectures on astronomy and those on clean, [illegible]tanical lines of Biblical teaching; temperance and uplifting of humanity. Some of the sermons which we hear over the radio are splendid. Agricultural programs are good but we get most of that news from our farm papers.

Father and mother are both past sixty years of age and do not like to read very much in the evenings, so they are the ones who really enjoy the radio most in our family.—Mrs. C., Erie County, Pa.

What about the Japanese Beetle?

he Legislature's Action Will Determine How Soon It Will Overrun the State

A SERIOUS situation has been brought about by the failure of the House Committee on Ap- ppriations to approve the full amount of the propriation asked of the Legislature for Japan- beetle control work in Pennsylvania.

If the Legislature fails to appropriate the full ount of $150,000 allotted to Japanese beetle ntrol work in the budget,—plus an additional 00,000 to make up for the sudden withdrawal federal funds,—all barriers will be dropped d farmers may expect to find this destructive t swarming over the whole state within a year two.

The letter which Secretary of Agriculture llits addressed to members of the appropriation mittees of both branches of the Legislature forth the sit- ion very well. reproduce the retary's letter ewith.

HAIRMEN and Members of Senate and use Appropria- Committees:

note that the eral Appropri- n Bill as re- ted out by the use Committee Appropriations March 23 es a reduction the item for nese beetle k of $50,000, amount allot- being $100,- instead of the 0,000 asked in the Budget. Secretary of culture of the monwealth of nsylvania and he officer re- sible for this of work, I feel y duty to call attention to need for an uate appropriation for this work.

he Japanese beetle undoubtedly constitutes of the most serious insect menaces to the ultural welfare and material prosperity of people of this state. It is an insect not native is country, already feeds on over 200 varieties lants, including both fruit and foliage, and e its activities are curbed, threatens to un the entire state in a comparatively short

The program which has been carried on the insect was first found in the state, by Department of Agriculture in direct coopera- with the federal government, has aimed to the infestation down to the smallest possible just as long as it is humanly and economic- possible.

Quarantine Has Been Effective

ne of the more important phases of the work to do with the maintenance of an effective antine, restricting the movement of infested products from the Philadelphia market dis- to points outside. We believe that the main- nce of this quarantine for the past several has to a considerable extent been respon- for the fact that the insect is not now very more widespread over the state than it is. maintenance of an effective quarantine on the ment of farm products for the past several has been made possible largely thru the use of federal funds, which have been appropriated for this purpose, supplemented by comparatively small state appropriations.

No Federal Funds for Quarantine

The budget for the Japanese beetle work for the next year called for a continuation of federal funds to finance this work, with an increased allotment from state funds. Up until the last few weeks it was thought that the federal appropriation would be adequate, with the aid of the funds called for in the state budget, to provide for the continuation of an effective quarantine on farm products. However, the federal appropriation for Japanese beetle work recently passed by Congress provides no funds whatsoever for continuing the quarantine on farm products, but does provide funds for the other major lines of work, including the research, parasite importation, and nursery quarantine work; the feeling in Congress for some time has been that the states directly concerned should finance the Farm Products Quarantine which has local application, since the federal government finances the work which has more direct application to the country as a whole, and that the appropriations as between federal and state should be more nearly in equal amounts from each source.

With the amount of funds provided in the Appropriation Bill just reported out from the House, it will not be possible to maintain an adequate quarantine on the movement of infested farm products for the coming two years. The Department will be faced with the alternative of giving up any quarantine entirely, which will result in the widespread distribution of the insect thruout the state within the next year or two. . . .

At the present time the infestation is confined to limited portions of Philadelphia, Bucks, Montgomery, Delaware and Chester Counties, an area of 1105 square miles or about one-fortieth of the state. Were it not for the artificial spread of the insect thru the movement of infested products, it would be many years before the insect would become thoroly established thruout the state, since the natural rate of spread for the last five years has averaged from five to fifteen miles per year. The distribution of the insect thruout the entire state thru the movement of infested products, however, would disseminate it over the state within a year or two. The final aim of the quarantine is to prevent the establishment of the insect in areas beyond the infested portion any sooner than this would occur as the result of the natural spread of the insect.

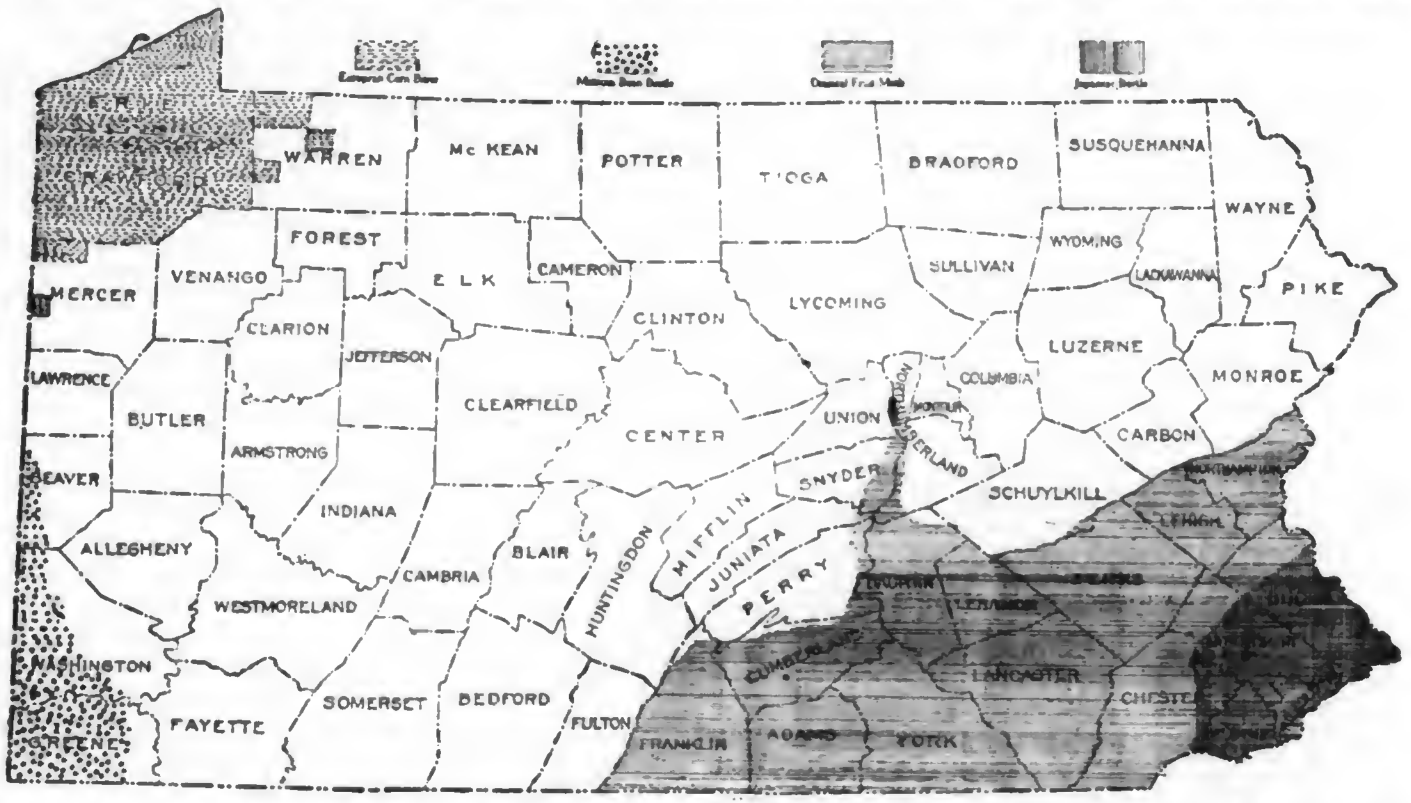
Ultimately the natural enemies of the Japanese beetle can be brought to a point where they will hold this insect under reasonable natural control, but before that end is attained natural enemies must be brought in from Japan and other countries where they now exist, and firmly established in the infested territory. This work will progress very much more rapidly and successfully if the area of infestation is held down to the smallest minimum that is possible. Obviously, it is easier to fight the insect while it is confined to a comparatively small area than it would be were the insects scattered at widely separated points thruout the state.

The Department of Agriculture can not fulfill its duty to the state without adequate funds and financial support from the Legislature. The Department believes that the Japanese beetle constitutes a serious menace to the agricultural welfare of the citizens of the state, and that there should be no relinquishment in the effort to hold down the insect to the greatest possible degree. On account of the failure of the federal appropriation to provide funds for this quarantine, an appropriation for the coming biennium of $250,000 for Japanese beetle work is necessary, instead of the $150,000 originally estimated, to enforce a quarantine which will give reasonably adequate protection to the agricultural interests of the state, and hold the spread of the insect to the average natural yearly spread. To enforce a quarantine which would be absolutely 100% effective in preventing any further spread whatsoever would cost not less than a million dollars, and probably more. The Department feels, therefore, that its request for the appropriation of $250,000 is reasonable, and represents the minimum sum necessary for the maintenance of a quarantine adequate under existing conditions.

(Signed) F. P. Willits,
Secretary of Agriculture.

Editors' Note.—According to present indications the Legislature will provide the amount set aside in the budget to combat the European corn borer. The fight against the Oriental peach moth and the Mexican bean beetle will be financed from the Department of Agriculture's general fund.

Insect Enemies Are Advancing into Pennsylvania from Three Directions



This map shows the parts of Pennsylvania where our most dangerous insect pests are now found. The darkest shading in the lower right hand corner represents the area of Japanese beetle infestation. The lighter shading in the same corner covers the larger area where the Oriental peach moth is known to exist.

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

THE weather of the past week or two suggests that it is time to work as well as think. Even those who have no soil in which to work tell me that they feel an urge to get out and dig in the ground when the signs and sounds of spring return. So nearly universal is this feeling that tens of thousands of gardens are planted every year and the resulting food and flowers contribute to the health and happiness of mankind.

• • •

UNFORTUNATELY for many people, the different feeling that pervades the air later in the season,—that hot, shimmering, languorous atmosphere,—seems to supplant the energy of the earlier season and the gardener loses the vim and interest which urged him to plant. Because of this, not all the seeds planted ever get a chance to show their breeding. Weeds and baked soil hamper and discourage. But so it is in all man's undertakings. A great many people lose their interest and ambition long before their projects have time to bear fruit.

• • •

SUCH people miss half the pleasure of life. They experience only the thrill of anticipation and fail to have the joys of realization. Years ago, one of the subjects which claimed the attention of rural debaters was, "Resolved, that there is more pleasure in pursuit than in possession." Personally, I think they are both necessary to a happy life. There is joy in planning and anticipating, but there is more in pursuing to a successful end. The human failures which clutter up society everywhere are not due, in all cases, to a lack of original plans, but to a failure to pursue, thru all conditions, to the end.

• • •

THAT is a pretty nice little preachment, but I have probably said enough at this time. There is a possible long, hot summer ahead and we are laying out a lot of work. The fine weather is suggesting it faster than we are able to perform it. Clem, the unknown man who happened along last year and who proved to be a splendid hand, came back, as he said he would, ready for work.

• • •

ALMOST every spring some farmers are seen plowing ground when they had better be sitting by the fire, unless they have something else they could do. Soil that is plowed when too wet is ruined for that season so far as highest production is concerned. It is sure to be cloddy and full of air spaces, and growing roots can make no use of either. Soil in the right condition to plow should break up as it falls away from the moldboard and should be harrowed the same day it is plowed. In this condition it will retain the soil moisture thru quite a long dry spell.

• • •

WE HAVE not yet bought a dis harrow. We have been holding off as to get more information as to the desirability of having one-half of the double disc of the cutaway type. S far, the testimony is divided. W have never had a cutaway disc, b theoretically it would seem th should be good for discing sod an cover crops in orchards. What is th experience of readers? Some ha told us they did not want anythi but the smooth-edge disc, but th use them on plowed ground only.

• • •

WE HAVE spent much ti during the past year in studying th different types of machines, vehicle implements, etc., in order to find o what is best adapted to our need and which will prove most econom ical. If one will investigate what offered in these lines and if he h an idea of the kind of machine nee ed there is little need to make mi takes. A good many of the misfits farm equipment are due to the i norance of the farmer as to what h wants, and to the over-enthusias of the agents in making sales. He is a place for manufacturers to sti a pin.

• • •

THE notes this week will be c cluded by a list of the pressing wo at Neshaminy Gardens: Fitting the hotbed, uncovering strawbe plants, pruning trees, forking o the manure, making concrete pl form at well, cultivating the gr vines, digging asparagus roots, a getting soil ready to plant. Th going to keep us out of mischief a week at least.—R. P. K.

What a fine world this would if those who have money would it as those who haven't money th they would use it if they had which they wouldn't.

THE CHEERFUL PLOWMAN

∴ The Hen That Hides Her Nest ∴

OLD Pecksniff is a good old hen hens and chickens go, she nev kills a baby wren and never tries crow, she never loots a neighbor's p nor stays out late, I know. Yet, has always been possessed of one cullar trait, a trait retained with and zest from early day to date once every year she hides her nest sure as tide and fate!

Now, there's no need for secr that I have ever known, fo while hen belongs to me the hencoop is her own, a home where nests are fu nished free; she need not set alone! But, 'long about the first of May sh sure to disappear, to hide herself and eggs away from prying eye and e to live in secret day by day without a word of cheer!

She never gets but seven chicks from thirteen eggs or more, for sh the prey of ants and ticks, and insects by the score, of winds that scatt straws and sticks and tip her shelter o'er. I've tried to teach her oth wise, I've tried to preach reform; I've told her that she lacked the size fight the bugs and storm, that she should come and blink her eyes ins where it is warm.

But, hens and folks, I've come to know, are very much the same; th keep old habits, crude and slow, old customs, trite and lame; they're sl to broaden out and grow, and learn a better game!—J. Edw. Tufft.

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

If a man empties his purse into his head, no man can take it away from him; an investment in knowledge always pays the best interest—Franklin.

Keep the Regular Schedule

BECAUSE hay was cheap and corn high is not sufficient reason for farmers to plow up more than the usual amount of grass land to plant corn. Seasonal conditions were responsible for both extremes and the same conditions may not occur again in ten years. As we have frequently pointed out, the most uniformly successful farmers we know are those who have followed a rather uniform policy as to crop acreages and animal production. It does not require a big general shift to or from any particular line to upset the balance and cause serious price changes. Looking at the question broadly, one of the most serious calamities that can happen agriculture is to have a season of extremely high prices for any given commodity.

One Beetle Area or Many?

WE CAN see no justification for failure on the part of the Pennsylvania Legislature to appropriate the full amount of $250,000 needed to enforce the quarantine on the southeastern corner of the state which is infested with Japanese beetle. The arguments all seem to be on the other side of the question.

Will a quarantine prevent the spread of the beetle? It has thus far prevented the spread of any important number of beetles over long distances. It does not stop the natural spread of from five to fifteen miles a year

If the natural spread cannot be stopped, why spend money for a quarantine? To protect the crops while the parasites which have been imported from the Orient develop in sufficient numbers to hold the pest in check. In Japan the beetle is rendered relatively harmless by its parasitic enemies. If it can be confined to a small area while these natural enemies are getting a foothold in this country the loss to farm crops will be reduced to the minimum.

What would be the result if the Legislature refused to appropriate the money needed for the quarantine? That is something for the imagination. There is every likelihood that many new centers of infestation would be started. Those who have seen what the Japanese beetle can do to an orchard, a crop of vegetables, a row of shade trees or a lawn, can understand what it would mean if the state had a score of these centers of infestation instead of one.

What Did You Read?

THE winter season is supposed to be the reading season on the farm. It would be interesting and also helpful for others to know what you have read during the past few months. What book on any branch of farming did you find helpful? What novels did you read that proved inspiring? What magazine articles could you recommend to others? What papers helped you in your business and made you better able to enjoy life.

We would like to have a number of short letters covering one or more of these questions and we will print them in a future issue. We know they would prove helpful to many of our readers. Many people desire to be better informed, but not all know what to read.

A 1000-Egg Hen

THE newspapers have been carrying a story of a Missouri hen that has just laid her 1000th egg. She is seven years old. Such stories always bring out the facile pencils of imaginative people. It has been figured that 1000 eggs equal a little over 833 dozen, which at forty cents per dozen amounts to $333.20. Allowing for the cost of feed at $2.50 per year, the cost of the 1000 eggs was $17.50. This leaves a clear profit of $315.70 this hen has made. They go on (as such theorists always do) and state that 1000 hens, the number one man can attend, would thus make for the owner the sum of $315,700 in seven years, or $45,100 per year. The writers deplore the fact that farmers in general and poultry keepers in particular do not fully know their business, else there would not be any "farm depression." An enterprising man has already taken advantage of the story to advertise a poultry feed which will make hens lay as has the one mentioned.

Watch the Insurance

EVERY year there are many heart-breaking losses by fire among farmers because the insurance policy "ran out just a few days before." One is very likely to forget thru a period of three or five years what is the date of expiration. If one is not sure he should get out the papers and look.

In most cases of five-year policies expiring this year the amount of insurance should be increased. Prices and building costs have advanced in that period. A proper amount should be allowed for depreciation, but we find altogether too much of a tendency among farmers to place too low a value on their property when taking out a policy, simply to save a little on premiums.

Deflation Continues

THERE has been a rather general sagging of prices in the stock and bond markets of late. There is little to cause alarm in this, because it was well recognized that there was no good ground for the sudden rise in many lines a few months ago. Neither was there a valid reason for the phenomenal rise in wheat prices last winter. These rises and falls are but the gamboling (note the spelling) of the bulls and bears in the stock markets. The outlook for production, including agriculture and building as well as manufacturing is promising. The one big factor which prevents a more rapid movement in this direction is the cost of labor. Of course, this cost can be taken care of in the industrial world in the prices asked, but it hits farmers hardest because they have no means of basing prices on the cost of production. Building is a line of work which may also suffer when and if a price slump comes later on. The labor cost on construction work is so great that it will require a good rental income perpetually in order to realize a final profit on some of the big enterprises.

Taking Money from Children

THE House Appropriations Committee, which, no doubt, is but doing the bidding of the bosses who picked it, has not increased its popularity with the public by making the report it did the other day. How long will the people stand for the ham-stringing of their state government for the mere purpose of venting political spleen and prejudice? Not only did it recommend cutting appropriations to important departments so that efficient public service will be impossible, but $7,000,000 was lopped off the public schools and other educational institutions. If the report is finally adopted it will make the running of the rural schools in many localities a financial impossibility. The same committee killed the bill proposing a four mill tax on capital engaged in manufacturing. That was to be expected since some leading manufacturers are also dominant political bosses in Pennsylvania. But what's the use of kicking? The final responsibility for conditions in any state, or at Washington, rests squarely upon the people themselves.

They Stick to Purebreds

THE Bureau of Animal Industry of the United States Department of Agriculture has conducted an inquiry, covering forty-five states, on the use of purebred livestock by farmers and stock raisers. One of the most interesting bits of information brought out by this inquiry is the fact that about ninety-six per cent of the farmers who give purebred sires a fair trial continue to follow the plan of using them for all classes of stock. This preference for purebreds, together with the widespread tendency not to register many of the animals eligible to registry, would seem to indicate that purebreds and good grades are chosen solely on the basis of individual merit. They evidently pay, even when surplus animals are not sold at high prices for breeding stock.

The Sane Country

ONE of the country's sanest and most level-headed newspapers has said editorially that only those who live in the country have a rational, healthy outlook on life. While the author of that statement may have been influenced by a revulsion from the rush and confusion of a great city, he seems, nevertheless, to have had in the back of his mind ideas similar to those entertained by Calvin Coolidge, who has been reported as saying:

"America has but one staple product. We till the soil, we operate our industries, we develop transportation, we engage in commerce, we encourage the arts and sciences, but these are only means to an end. They are only carried on in order that America may produce men and women of our standards of citizenship.

"We want to see them endowed with ability and character, with patriotism and religious devotion. We want to see them truly American, while ready and eager to contribute a generous share to the world welfare.

"We want to see them honest, industrious and independent, possessed of all those virtues which arise from an adequate moral and intellectual training joined to experiences which come from the open country."

Washington Letter

BELIEVES IN MARKETING BOARD PLAN.—Secretary of Agriculture Jardine has given out that he plans to "sell" to Congress and the people the program of farm legislation proposed by the President's conference, and he will also reorganize the personnel of the Department of Agriculture to the end that interdepartmental controversies cease and more coordination of action may be obtained. This is taken to indicate that Secretary Jardine will use the influence of his department toward the enactment of the cooperative marketing board plan proposed by the conference and embodied in the Capper-Haugen bill, and that he will have the bureaus and divisions working harmoniously along certain definite lines, if he finds it necessary to ask bureau and division chiefs to resign.

PATENT OFFICE TRANSFERRED.—The transfer of the Patent Office from the Interior Department to the Department of Commerce is held to be a victory for Secretary of Commerce Hoover. It is being gossipped about Washington on something more than idle rumor that the Bureau of Mines is soon to be transferred from the Interior Department to the Department of Commerce and that the next move will be the transfer of the marketing activities of the Bureau of Agricultural Economics to the Commerce Department.

WHAT HOOVERISM IS.—While Mr. Hoover is expected to leave the President's cabinet in the near future, along with Secretary of War John W. Weeks, Postmaster General Harry S. New, Secretary of the Interior Work and Secretary of Labor Davis, it is believed that Hooverism will remain. Hooverism is an idea, and the removal of all marketing activities of whatever nature to the Department of Commerce is its basic tenet.

FRENCH-GERMAN POTASH AGREEMENT.—Prospects for lower prices on the various forms of potash imported from Europe, due to expected competition between French and German potash interests, have gone "glimmering" according to reports received by the Department of Commerce. It is found that French and German potash producers have entered into an agreement as to both markets and price levels.

The Department of Commerce has been making a survey of the potash trade for several months, along with other industries which produce essential raw commodities and where discriminations against American buyers either in price or marketing arrangements might exist. It is indicated that remonstrances thru diplomatic channels will be made to both France and Germany as a result of this combination of potash interests in the two countries.

OPENING UP NEW LAND.—The developing of new ready-made farms by the federal government is going on continually, notwithstanding the unfavorable situation on western reclamation projects, and the protests of all big farm organizations against the opening up of new irrigation projects until demand for farm products catches up with production.

Secretary of Interior Work reports that 18,000 new settlers on government reclamation projects will be needed soon, and he is asking transportation companies to cooperate with the government in obtaining them.

SCHOOLS FOR NON-UNION BUILDERS.—Demands of the building trades unions for wage increases are causing the builders' associations thruout the country to open and conduct trade schools for the purpose of producing trained non-union employes. Several such schools are now running successfully in the large cities. These schools contain classes for plasterers, plumbers, carpenters, painters, bricklayers and similar employments.

It is claimed that building costs will be prohibitive if the unions keep on demanding higher wages. In Washington in 1914 bricklayers were getting sixty-seven cents an hour; in 1925 the scale is $1.50 an hour. Carpenters received fifty cents in 1914 and $1.16 an hour in 1925; plasterers sixty-three cents in 1914 and $1.63 in 1925. The average increase in the seventeen building trades in Washington is from fifty-three cents an hour in 1914 to $1.30 an hour in 1925.

WILL SPEED UP PARCEL POST.—A new special handling service, which will give the sender by parcel post the very best service possible, will be available April 15 when the provisions of the postal law become effective. The cost of this service will be twenty-five cents per package. Postmaster General New explains that special handling of parcel post matter means that parcel post under this special service will be handled as first class mail.

EXPORTS ABOVE PRE-WAR LEVEL.—Lack of foreign markets has been held by a certain group of farm leaders to be the cause for the unfavorable agricultural situation during the past five years, and their remedies for the farmer's ills is the extension of foreign markets. Figures presented by the Department of Commerce show, however, that our agricultural exports are far above the pre-war level.

SPECULATORS LOST THIS TIME.—Farmers are not sufferers because of the recent spectacular drop in the price of wheat, according to Secretary of the Treasury Mellon, who says he understands that most of the wheat crop was out of the hands of the farmers when the prices fell, and that therefore the purchasing power of the agricultural industry has not been seriously lessened. Secretary Hoover concludes that the speculator and not the farmer will be the chief loser in the wheat situation, as about eighty-five per cent of spot wheat had left the farms and had been sold before speculation had been pronounced.—E. E. Reynolds.

Harrisburg Letter

PROGRAM PASSED UP.—The Legislative program was well established on Capitol Hill when the session of the assembly opened but it appears to have come in a bad season owing to relations of the executive and legislative branches. Bills based upon conclusions of meetings extending over months have had rather scant consideration and others have been tossed back and forth when the necessity for them was obvious. Some of the members interested in features of the program will make a final effort, failing which they will organize the program on a more definite basis for next session and not trust to the fortunes of a general administrative policy.

WANT BEETLE FUND BACK AGAIN.—One of the matters causing criticism of the financial end of the Legislature is the reduction of the fund for fighting the Japanese beetle which is attributed to some grouches over the manner in which the quarantine was administered. Efforts will be made this week to have the Senate put back the cut and some presentations of the urgencies of the situation be made. Legislators in counties liable to be invaded have been getting busy on the committee in charge of the bill and will attend the hearings.

HIGHWAY WORK AND BILLS.—With contracts let and bonds sold only weather will hold up the highway construction program now, and state authorities are confident this year's showing will be close to a record for additions to the improved milage. The omnibus road bill, which would add numerous routes to the system, is in an uncertain state, but there are a number of other bills liable to cause discussion. One of them would permit the state to buy materials and sell them to contractors. The bills relative to relocation and changing of streams; right to enter upon private lands for drainage purpose and other matters cropping up in departmental experience are likely to be debated among rural members.

TAXATION ROWS.—So much feeling has been aroused over the fate of the "dry" bill and other legislation that the subject of taxation has suddenly bounced from one which was to have been given polite attention to one of the biggest of the session. Attempts are now being made to transfer the sources of revenue from such things as anthracite, mercantile business and inheritances to capital invested in manufacturing. This has been a subject of battling in every session for twenty years and this sitting is keeping true to precedent.

THE BOND ISSUES.—Signs of a tendency to slow up on bond issues are to be seen in both branches of the Legislature and it is possible that few of those proposed this session will get to the stage where the people will vote upon them. The aggregate of bond issues proposed this session, including those in for the first time, is almost $140,000,000, or beyond the total of present debt by millions. The people opposing the forestry bond issue have advanced plans ranging all the way from a direct appropriation of $2,000,000 to a proposal to buy lands with an increase in hunters' license fees.

NO EMERGENCY FUND.—It does not look as tho there would be any emergency fund created this session to meet pests or other menaces to agricultural welfare altho advocates of such a measure say the need is obvious. One of the objections is that it was not included in the budget and another is that it would be simply adding in an indirect way to the Department of Agriculture appropriations.

CENSUS WELL ADVANCED.—The state's end of the farm census which is expected to furnish reliable first hand information on agriculture is getting well toward the point where state-wide studies can be made. The amount of material turned up is said to be the most interesting indication of the diversity of agriculture as well as the heavy investment in farming and its branches in Pennsylvania.

GRAIN SEEMS GOOD.—Judging from the reports coming to the Capitol neither the late and unfavorable start of wheat last fall nor the peculiarities of weather in early winter have done much damage to wheat. In the southern counties the prospects are said to have been considerably improved over a month ago.

DEER AT IT AGAIN.—Deer are again reported to be damaging orchards in the fruit raising counties, their latest stunt being to eat the buds. In some instances this damage has been more extensive than usual. The Legislature has yet to complete the new bill relative to payment for damage and building of fences and the measure to permit killing of deer where they are a nuisance without so much red tape.—Hamilton, Harrisburg.

New Jersey Letter

GAME LEGISLATION PASSED.—Ten of the twenty or more fish and game bills introduced into the New Jersey Legislature this year became laws. Three of the new statutes were measures advocated by the State Fish and Game Commission, one by the Fish and Game Conservation League, one by the New Jersey Audubon Society and one by the committee representing the State Grange and Farm Bureau. The measure advocated by the farm interests, becoming a law, permits the owner of a farm to allow his dog to run at large on the land which he occupies except during the open season for deer. This eliminates the restriction of the actions of dogs on the property of the owners to which the farmers have objected for several years. Another bill becoming a law removes the restriction against killing ring-neck pheasants in the area infested by the Japanese beetle.

FARM LOAN CONFERENCES.—Representatives of the Federal Land Bank for the northeast district have been meeting with the loan committees of the various farm loan associations thruout the state. On alternate years this plan of contact is carried out, while every other year the officers of the Land Bank and those of the farm loan associations of New Jersey meet at Trenton for an biennial conference. Farm values from a producing standpoint are being considered at these meetings, also the probable value of farms thirty-three years hence when the farm loan mortgage expires under the amortized plan of payment. The reviewing appraiser for the Farm Loan Board of Washington has stated at these conferences that thirty-five per cent of the present farms will double in price in the next twenty-five years, forty per cent remain about the same, and twenty-five per cent revert to their original wild state.

SEEK OUTLET FOR BROILERS.—A poultry delegation from the southern part of the state recently met with officials of the New Jersey State Department of Agriculture at Trenton, in an effort to formulate a plan so that New Jersey poultrymen may be allowed to ship their broilers into the New York markets while the embargo against the European fowl pest is on. After plans have been more fully materialized, a conference will be scheduled with the New York State Bureau of Animal Industry and the New York City Board of Health. The poultrymen claim that shipments of broilers properly inspected will eliminate the chance of carrying disease to city consumers and will cause no chance for the spread of the trouble among other poultrymen, and at the same time provide a proper market outlet for their fowls.

ALFALFA TALKS.—The New Jersey State College of Agriculture is cooperating with county boards in various parts of the state to encourage the sowing of more alfalfa this coming year. One of the recent efforts along this line was a meeting of farmers scheduled at Somerville, N. J., on March 27. County Agent H. C. Haines points out that alfalfa is very well adapted to many sections of Somerset County, particularly in the dairy regions.—B.

New York Letter

TO TRAIN RURAL MINISTERS.—Cornell is one of four universities of the country to hold a summer school this year to train rural ministers to meet the social, financial, and spiritual problems of the modern rural church. A fine faculty has been selected for the work in this state, all of them specialists in rural work, including the leading denominations, and one Catholic instructor.

DAIRYMEN'S PROBLEMS.—Tompkins County has been hard hit by the ruling excluding Grade C milk from New York City. The Dairymen's League no longer manufactures such milk, and this leaves a very limited outlet until farmers can remodel their barns to meet Grade B requirements. The present classification prices on milk will be continued by the League into April so far as possible under a new policy of maintaining a price so long as conditions warrant, rather than establishing a price each month in advance.

LEGISLATION NOTES.—This is the last week of the legislative session. Some 1500 bills have been introduced and less than 200 passed to date. It has, like last year, been a session of political wrangling. The big issues have so far had scant attention. The prohibition enforcement bill lacks one vote of passing the Senate at present.

HOMEMAKING PRINCIPLES BROADCAST.—The Home Economics specialists at Cornell have started a series of short radio talks on child training, household management, nutrition, and clothing problems, which promise to be popular with radio fans. WGY, at Schenectady, will be the sending station.

FARM NOTES.—Grass fires have been a state-wide menace the past week. The game has suffered heavily, hundreds of pheasants' nests having been burned. Young evergreen plantations have also been injured. Many farmers have quantities of cabbage in hand with no market. Never have there been so many farms closed at least temporarily as this spring. Maple syrup making is at its height now, with prices about as usual, $1.75 to $2 per gallon being received for highest grade syrup.—M. G. F.

Expensive Seed—Why Cauliflower Heads Too Soon

FIVE dollars an ounce for tomato seed or two dollars a pound for tomato seed, which shall it be? We have bought an ounce of selected seed for one acre of canning tomatoes, another ounce at fifty cents for another acre, but could get seed on the market for two dollars a pound.

Is the five-dollar seed a luxury or a good investment? Spread over an acre of canning tomatoes, the cost will come back to us if the yield is improved by only a third ton. If the yield is a half ton better than in the case of ordinary seed, we have gained by using the better seed, but there is even a stronger reason why we think this seed worth while.

That first investment of five dollars will make us prepare a better seedbed, perhaps use glass or cloth frames, plan to protect from flea beetle, use every effort to make the land just right, cultivate and hoe more than usual, use all means to be sure of getting back that five dollars. If we do these things we will be reasonably certain to get a much better yield of tomatoes, whether or not the seed is in reality any better than two-dollar brands.

Will Protect That Investment

They say that when a man buys a farm or a house in town he is at once a better citizen, because he wishes to protect that investment. We will do all we can for the tomato crop just to protect that five dollars.

Not over three days ago I was in a cannery office and found seed that would have to sell for four dollars a pound instead of the three dollars that growers were used to paying. The party in charge said: "We'll probably have to give that seed away because growers are not willing to pay more than three dollars."

Yet since a pound of seed will produce plants for fifteen acres, the extra cost to the grower if he uses the four-dollar seed would be only seven cents.

Treatment of Cauliflower

Cauliflower plants will stand less rough treatment than cabbage plants, according to our experience. This is especially true as to hardening by withholding water, and any form of delay in growth.

When badly handled they make heads at too young an age, the heads sometimes not being larger than a small ball.

We bought cauliflower plants from a commercial grower two years ago and found small heads already formed in them. Of course, these made no marketable crop.

We think the severe drying that cabbage will survive will cause early heading on cauliflower, heads too small for any use. We believe it is wise to hold the plants under glass longer than is necessary for early cabbage. Choose the most promising piece of ground, and give special attention to maggot and worm control.

For Hotbed Sash

A dozen angle irons kept in a handy place will quickly strengthen weak hotbed sash in an emergency. Faulty joints between ends and sides are especially common, and angle irons are just the things to strengthen these joints.

Straight flat bars of iron four to six inches long and bored for four screws will hold up weak middle bars of sash. In the cheaper sash these bars sometimes have small knots or cracks that are affected by the weight of snow in winter, or rough handling at any time.

An iron bar screwed on under the knot or crack will make a better repair than can be made with nails and wood.

Insects on Lettuce

Lettuce in cold frames is apt to suffer from the attacks of aphis or lice in the warm days of early April. If the plants droop and the leaves curl a little, look for lice.

Tobacco fumigation is good if the frames can be made tight enough to hold the smoke. Tho I have not yet tried it, calcium cyanide should be very useful for this purpose. Since this material may be used outdoors for the killing of insects it would seem that one would not have to pay so much attention to the tightness his frames when using this fumigant as when tobacco is employed. We propose to try calcium cyanide for the control of the aster beetle this year.

The beetle is nearly a hopeless case so far as older methods of trol are concerned, yet does more damage in this county than any other trouble of the aster, not excepting even the yellows disease.—W. C. P.

Matchum Thrives if Fe

THE Matchum tomato, one of the three varieties produced by the Department of Horticulture at the Pennsylvania State College is getting some publicity in Maryland as a competitor of Bonny Best and John Ba

A report states that whereas the latter varieties yielded four to tons last season, the Matchum ga six tons. That is not high for a season, but even a ton difference

A cluster of Penn State Earliana tomatoes.

yield means at least twenty dol to the commercial canning h grower.

My impression of the Match and of the Nittany variety produ also at State College, is that need a richer soil than we have used to providing for the cann crop, and perhaps more moistu Like a finely bred animal, these rieties are more particular as to treatment they get, but given right treatment they have promise than the older sorts W. C. P.

Wayne's Union Scho

WAYNE COUNTY boasts of first and only union sch district in Pennsylvania. The tricts formerly comprising Hones borough and Texas township are consolidated under this plan, plans are made for building two fine grade school buildings this ing summer.—W.

Five Years Ago and Five Years Ahead

Five years ago we sold several thousand fruit trees. This summer their happy owners will watch them bear absolutely True to Name fruit and will reap the substantial reward that is due them for buying carefully and investing land, labor, fertilizer, and, most of all, TIME

Five years from this spring YOU will await the fruit from the trees that you are going to plant this year.

Buy carefully now. Disregard a few cents difference in price—one way or the other. (Price of fruit trees is no indication of their value.)

Plant Kelly's Bros. trees BECAUSE they are guaranteed and certified absolutely True to Name. They will produce exactly the kind of fruit that you select now.

65,000 of our this year's trees bear the lead seal of approval of the Massachusetts Fruit Growers Association to stay there until the tree bears True to Name fruit, as guaranteed by us.

PLANT STOKES SEEDS
for The Very Best Vegetables

By concentrating our entire effort on vegetable seed problems, we have developed certain seed stocks which should have a place in every gardening operation. Don't fail to give Stokes Seeds a trial this year. You will quickly see the difference. No planter should be satisfied with his seed unless it is the best obtainable.

Our policies include:
1. Simplified variety list—emphasizing only the very best stocks.
2. Germination tests printed on every package.
3. Chemical treatment of all seed for the eradication of surface-borne disease.
4. Orders filled the same day as received.

Three at Once!

It is just as important to keep your potatoes free from blight as it is to fight the beetle, flea and other profit-destroyers. If at the same time you can invigorate the crop and increase the yield accordingly, at no additional cost, it means clear gain.

POTATO SPRAY does all of this, enabling you at one operation to fight off both classes of plant enemies and invigorate your plants. It is a non-freezing powder form of Bordeaux and arsenate compounded with great care—an insecticide and fungicide put up by a company noted for its farm fertilizers and chemicals.

Pennsylvania State College

Black Knot—Red Spy

What can be done for black knot on plum trees? Can a person safely prune them yet before spring? Does wet weather affect this disease? Does planting plum trees in wet ground have anything to do with it? Is there a new variety of apple known as the Red Spy? Is it identical with the Cortland? State its history, if possible.—E. C. M., Bedford County, Pa.

The methods of controlling black knot of plums are given in answer to another inquiry printed last week. By all means prune the trees now; the spores are disseminated in late spring and if the knots are all cut out now the spread of the disease is checked. Like most fungous diseases, black knot is favored by moist conditions. It is, therefore, more prevalent in a wet season, and wet ground favors the disease.

Red Spy is a bud sport of the Spy; one limb of a Spy tree bore apples that were solid red instead of striped, otherwise the apples resembled Spy. When buds for grafting were taken from this limb they "came true," and trees of Red Spy can now be bought of several nurserymen. There are several other instances of bud sports, such as the Red Rome, Red Stark, Red Delicious. The Red Spy in no way resembles the Cortland apple, which is an improved McIntosh.—S. W. F.

Pitch Is a Symptom

Kindly advise me if brine from cooking soap will injure peach trees if you pore it at the roots. My trees are only two years old but that pitch is showing on some of them.—C. L. H., Lancaster County, Pa.

This material is very likely to injure fruit trees, and it would be unsafe to use any quantity of it, especially on peach trees, which are quite sensitive. The "pitch," or gum, exudes from peach and cherry trees whenever the trees are injured from any cause whatever, such as winter injury, sunscald, unfavorable soil, injured roots. This "gumosis" is not a disease itself, but is merely a sympton that something is wrong.

Why put this liquid on your fruit trees, anyhow? The value of the plant food it contains is small compared with the danger.—S. W. F.

Can't Please Everybody

WHOEVER it was said that th county agents was put on th job to increase production so's th farmer would starve because of l prices is a—a little bit mistaken. been up here in the Agricult College now several years and sentence ain't expired yet. I'm lo in' all the time, and one thing is th them professors has laid off "more production" stuff fur te years, if they ever did talk it.

I hain't never picked up a textbook, nur listened to a lecture, inspected the experiment farm, worked in the laboratory, but wh it's been made clear enough to g thru my ivory Missouri dome, (I'm not one of them soft shelled cans; that ain't the kind of a I am,) that the hull story about riculture science is to git more of a smaller patch at a better p than has ever been done in the h tory of the world before.

They been teachin' more efficie production, and better quality, stead of more stuff of any old ki Here lately they been gittin' out formation about what crops ought to pay best durin' the comi season. Could anybody do more? N not even the Creator. All He mi do in addition would be to cha the climate and if He let it rain a dry lander in July the irrigati farmer would cuss because ha was interfered with, so even the C ator would have a time tryin' please everybody. It cain't be do —Thos. Jefferson Putnam, "Specia ist in Rural Devilment," Color Agricultural College.

What Pittsburgh Imported in '2

CARLOT unloads of the 17 most important fruits and vegetables in Pittsburgh totaled over 20,000 cars in 1924, according to a report of the Pennsylvania Bureau of Markets.

The heaviest unloads consisted of potatoes with 4033 cars, an 18 per cent decrease from the 1923 business which amounted to nearly 5000 cars. To a large extent, this decrease occurred in unloads from the North Central states extending from Michigan to the Dakotas. In 1923 these states supplied 53 per cent of the total potato unloads, while last year only 37 per cent originated in this area. On the other hand, a small part of this decrease was absorbed by slightly heavier unloads from the nearer potato producing sections of Pennsylvania and New York.

Pennsylvania's Shipments Small

Apples were the next commodity in importance of volume. A slight decrease also occurred here, dropping from 3005 cars in 1923 to 2799 cars last year. One-half of these 2799 cars came from New York, one-fourth from the Pacific Coast area, and the remainder from 18 other states, chiefly Delaware, Pennsylvania and the Virginias.

Grapes followed with 2569 ca practically equivalent to the 2 cars of 1923. California furnish two-thirds of this fruit, with N York, Michigan and Pennsylva prominent among the oth ship of grapes to Pittsburgh.

Pennsylvania producers suppli the Pittsburgh market with a n ber of commodities as follows: 3 p cent of the apples or 92 cars: 7 p cent of the cabbage or 88 cars; per cent of the celery or 21 cars; per cent of the grapes or 108 ca 3 per cent of the onions or 33 ca 3 per cent of the peaches or 25 ca 4 per cent of the pears or 21 ca 7 per cent of the potatoes or 3 cars; and 3 per cent of the stra berries or 12 cars.

Total carlot unloads of the important fruits and vegetables Pittsburgh during 1924 are: Pot toes, 4033 cars; apples, 2799; grap 2569; oranges, 1856; cantalou 1203; cabbage, 1191; tomato 1134; onions, 1023; lettuce, 8 peaches, 841; celery, 822; sweet p tatoes, 757; watermelons, 737; pe 492; grapefruit, 473; strawberr 458, and lemons, 352.

An optimist is a bald-headed m who is glad he isn't gray-haired.

My *New* ENGINE BOOK!

Here's the engine book you need to really *know* engines. Chuck full of valuable information on power for the farm—things I've learned during a half century of work on the famous WITTE Engine. Write me for it today—I'll send it absolutely free, postage paid. No obligation at all.
ED. H. WITTE

Only $5.69

uts a WITTE on Your Place

ink of it—America's best engine can be yours for only a few dollars month. Get away from the high-priced help—get away from the d, back-breaking chores—here's the rugged, dependable WITTE ottling-Governor Engine ready to go to work. Twenty-four hours d work every day if you want it—only a few pennies for fuel.

ses Kerosene, Gasoline, Distillate or Gas

0% More Power The WITTE gives perfect service on any fuel—always use the cheapest fuel and you'll get surplus power. Plenty of power for the big jobs and a saving in fuel on the t work. So simple that a child can operate it. Trouble-proof, too—you can k the WITTE every day and in any kind of weather. Easily moved from place lace, it answers every power need on your place. Over fifty improvements— y exclusive devices found on no other engine.

ave 20% to 50%

salesmen—you buy direct from the st factory of its kind in the world my low prices save you nearly half. y-equipped—ready to go to work the te it reaches you. REMEMBER— ies from 2 to 25 Horse-power. *Built Guaranteed to last a life-time.*

nderful WICO MAGNETO

are equipped with the celebrated WICO to, the best high-tension ignition system . Far superior to the old-style battery engine dable and economical. Only one moving 't get out of order.

90 Days FREE Trial

So confident am I that this engine will make you more money and is the best and cheapest you can buy that I will let you try a WITTE for 90 days at my risk. If for any reason it's not right, I simply say *"I'll make it right and it won't cost you a penny."*

New Device Makes Starting Easy Starts right off in the coldest weather—my new device makes starting easy and quick. Perfect speed regulation and improved motor-style carburetor.

All Sizes, 2 to 25 Horse Power

The Famous Thirty Year WITTE Crankshaft Guarantee

WITTE Crankshafts are Guaranteed absolutely against breaking, bending, warping, crystalization and wear for thirty (30) years, regardless of nature of work done, climate or any other conditions. Ed. H. Witte, WITTE ENGINE WORKS.

I know of no other engine crankshaft with such a guarantee. WITTE Crankshafts are drop forged and heat treated in oil. They are ground to a glass finish on precision lathes to an accuracy of one-thousandth of an inch. Is it any wonder that WITTE Throttling-Governor Engines are known all over the world for their continuous superior performance?

Your Fall and Winter Profits DEPEND on WHAT You Feed NOW!

THE MONEY YOU'LL MAKE from this season's chicks depends on your ability to raise them. Every chick hatched is a money-making opportunity—*but no more.* Almost anybody can raise 50 chicks out of a hundred, but the poultry man or woman who really makes money raises 80% to 95%. The percentage of chicks you will raise depends on what you do now.

If You Want to Raise 95 Out of 100 of Your Chicks

—it is vitally necessary that you pay particular attention to their food requirements. While no food should be given chicks for the first 48 to 60 hours after hatching, EVERYTHING DEPENDS ON THE FOOD YOU SELECT FOR THEM after that period.

The egg yolk in the chick's body during its first 60 hours is the ideal chick feed. It contains the right food elements in the right proportions—and is rich in health-giving vitamines.

The Closer You Duplicate Nature's "Chick Feed," the More Chicks You'll Raise to Sell

TO RAISE 95 OUT OF 100 CHICKS, use a chick feed that approximates, as nearly as possible, this natural "chick feed"—the yolk in the chick's body. Don't use haphazard feeds. They may lack one or more of those vital food elements—be improperly proportioned—or fail to contain sufficient vitamines, the absence of which in chick feeds is responsible for the ravages of certain chick-killing diseases.

For the sake of your profits next fall and winter, don't experiment! Don't gamble on fads or theories! Play safe!

For Greater Profits With Certainty

—use *GLOBE CHICK STARTER and GLOBE GROWING MASH.* Both contain the finest of necessary ingredients, correctly balanced, and rich in health-giving vitamines.

GLOBE CHICK STARTER, compounded with dried buttermilk, plus Globe Chick Scratch duplicate, as nearly as possible, Nature's "chick feed." Containing the necessary nutritive elements for building fat, muscles, bones, feathers, they take the chick past the danger point.

GLOBE GROWING MASH continues the benefits built with Chick Starter and gives the young chickens that foundation of strength, vigor and health that will insure greater profits for you

Our Reputation —Your Assurance

Doesn't it stand to reason that when a concern with an enormous organization like ours, the largest plant of its kind in the world, with 22 years' experience, experimental yards, experts—*recommends* a certain method of chick raising and certain food compounds, *that they must be good?*

They are. They have to be. Our reputation depends on their success for thousands of poultry raisers.

Investigate the GLOBE METHOD of Chick Raising

Mail the coupon today for our *free* book, "POULTRY PROFITS." Read Pages 31 and 37 and learn of the chick-raising method we have found best in our experimental plant. This method PLUS Globe Poultry Feeds will enable you to get every profit-dollar there is in your chicks.

But to do it, you must act now. This is the time to make possible bigger fall and winter profits. Get started right. Order Globe Chick Starter from your dealer today. He will also give you our book describing our unsurpassed chick-raising method. Or mail in coupon and we will send you a copy free.

Kirby Poultry Farm

Leg Weakness in Hens

Our chickens first lost the use of their legs, could not get on the roost, then their toes turned under and came off. They also lost their legs at the second joint. We separated them from the others. We did what we could but could not help them so I killed them. What do you think was the cause of the trouble?—T. S. J., Monroe County, Pa.

Leg weakness, or a kind of paralysis of the legs, sometimes attacks hens in the spring. The use of two per cent ground limestone in the dry mash seems to help prevent this trouble. Plenty of green feed and a balanced ration are also useful in preventing leg weakness. It seldom occurs after the hens have been on free range for a few weeks. Such troubles cannot be treated successfully with medicine but can largely be controlled by good feeding methods.—R. G. K.

Canker Is Contagious

I have a pen of sixteen Buff Orpingtons, four hens and sixteen pullets. About three weeks ago I noticed one of the pullets appeared to have a sore mouth on one side of bill only, which developed quite rapidly until it looked as if she had a grain of corn fast in her mouth with the large end toward the corner of the mouth. There was no sign of any pus or patches anywhere else in her mouth or on tongue. Now, there is another pullet starting the same way and still another with a swollen face on one side, but the eyes are not affected. I shall be very thankful if you could tell me what the trouble is and how to treat and prevent spreading as it seems to be contagious.—F. P. K., Montgomery County, Pa.

The trouble is probably canker. Remove the thick yellow pus with a knife blade or splinter of wood sharpened like a small chisel. Touch the wound with iodine or strong undiluted commercial coal tar disinfectant. This will tend to destroy the infection. Isolate the hens as canker is contagious and several treatments may be necessary before healing results.—R. G. K.

Advice to Californian

I should like to enter the poultry business this spring or early in the summer, but before doing so, would appreciate some advice from you.

Do you think $5000 sufficient capital for a man and wife to start in this business?

How large a place would you advise buying — how many acres?

Do you consider it an advantage to raise enough grain for your flock?

Do you advise mixing your own laying mash?

How many chicks would you suggest buying the first year?

What kind of brooder houses would you suggest? What do you think of the round brooder house?

I am a business woman, having worked in an office for ten years, and feel that I have ability to carry on such a business. My husband earns very good wages. He was raised on a farm, so understands farming. Would you advise us to give up our occupations to enter into the poultry business? We both prefer the outdoor life. I do not wish to continue in office work as it is too confining. I require more exercise and fresh air.

Five years ago we made a small start in the poultry business in the East. We purchased 1500 baby chicks and raised them with coal burning brooders. We met with a fair measure of success. We count our experience an asset. We lived on this place two years, shipping our eggs to the New York market. Our surplus stock of cockerels was also shipped to the New York market. We learned to cull and in the summer disposed of our culls.

We came to California three years ago last month. We had too large a farm in Pennsylvania, over 100 acres, which made it difficult for us to devote as much time as necessary to the poultry. We feel that our experience has taught us that a small place is more desirable, in order that we may both devote practically all of our time to the poultry.

We should like to have a flock of 1000 pullets in the fall. Will this number afford us a good profit at the present prices of grain?—Y., California.

The amount of capital needed start a business is not definite. with your practical experience, f lowed by a study of California p try conditions, I should think $5000 might do quite a lot. Co tions vary in different parts of C ifornia, as you know, and being the ground, you are better able judge than I, as to how much will need to buy the kind of a pl you like.

From Five Acres Up

There are a lot of good pou farms on the Pacific Coast and will pay you to visit some of th and talk with poultrymen who making a success of the business.

I have twenty acres in my pou farm at present but may buy land when I am able. Poultry are successful on places from acres up and there is no defi acreage that I can recommend as best. If you have the land and help you can raise grain but it hard to do much general farm while engaged in a specialized b ness like poultry production.

I like colony brooder houses and would buy three chicks every pullet I wished to house winter. This would allow for losses and culling.

Round brooder houses are right, altho possibly a little complicated to build than shed colony houses.

A Matter of Personal Preference

I would not wish to advise one to give up his present occu tion to engage in the poultry b ness or any other branch of busi or farming because it is largely matter of personal preference and problem which only the parties cerned can decide.

I believe from reading of previous experience that you are ter qualified to take up poultry than many who think they wo like the business. But I would vise you to go slowly and make study of poultry farming under C ifornia conditions before risking much money. I still believe this be done the best by working o poultry farm where both the and bad points of the business soon be evident to you. Brief vi to poultry farms are often too m like seeing the zoo. It's lots of looking at the stuff but you do see the work.—R G K

Books Worth Owning

AGRICULTURAL MECHANICS by Robert H. Smith has just been published by J. B. Lippincott Company, Philadelphia. It is another volume of the Lippincott Farm Manuals and a worthy addition to that useful series of books. The author is well equipped for preparing such a work, being instructor in farm engineering and mechanics at Cornell, and a member of the American Society of Agricultural Engineers. The book is divided into twenty chapters which treat on shops and tools, mathematics and plans, care and use of lumber, devices, barns, home and general use, problems in shop work, installation of pumps and water supply, care and repair of harness, rope and its uses, concrete, gas engines, etc. This book and some tools which will do much to interest the boys and direct their attention to the possibilities of farm life. Numerous drawings and cuts add to the teaching value of the work.

* * *

THE SMALL HOME: How to Plan and Build It. This is the title of a new book by William Draper Brinckle who has for several years been drawing plans and specifications for modern homes at moderate cost. Pennsylvania Farmer has published several of his planning during the last two or three years. This book contains sixty plans for bungalows, cottages, two-story houses, garages, etc. Pencil drawings as well as plain outline plans are given of each building, and a further service is offered after a plan has been selected. At a further cost of only two dollars complete blueprint plans of any given house may be secured. In addftion to the pictures and plans of buildings, the author discusses important subjects under special chapters, viz., Selecting the Site, Counting the Cost, Plans and Specifications, Bricks, Boards and Such Things, The Home Electric, Heaters and Fireplaces, Porches for All Purposes, Water and Waste, A Bit About Plumbing, You and Your Builder, Making over the Old Home, How about the Garage, Home that Pays for Itself, The Problem of the Farmhouse, Fixings and Furnishings, Framing the Picture. Published by Robert M. McBride Co., 7 W. Sixteenth St., New York City.—R. P. K.

Reforesting Holy Land

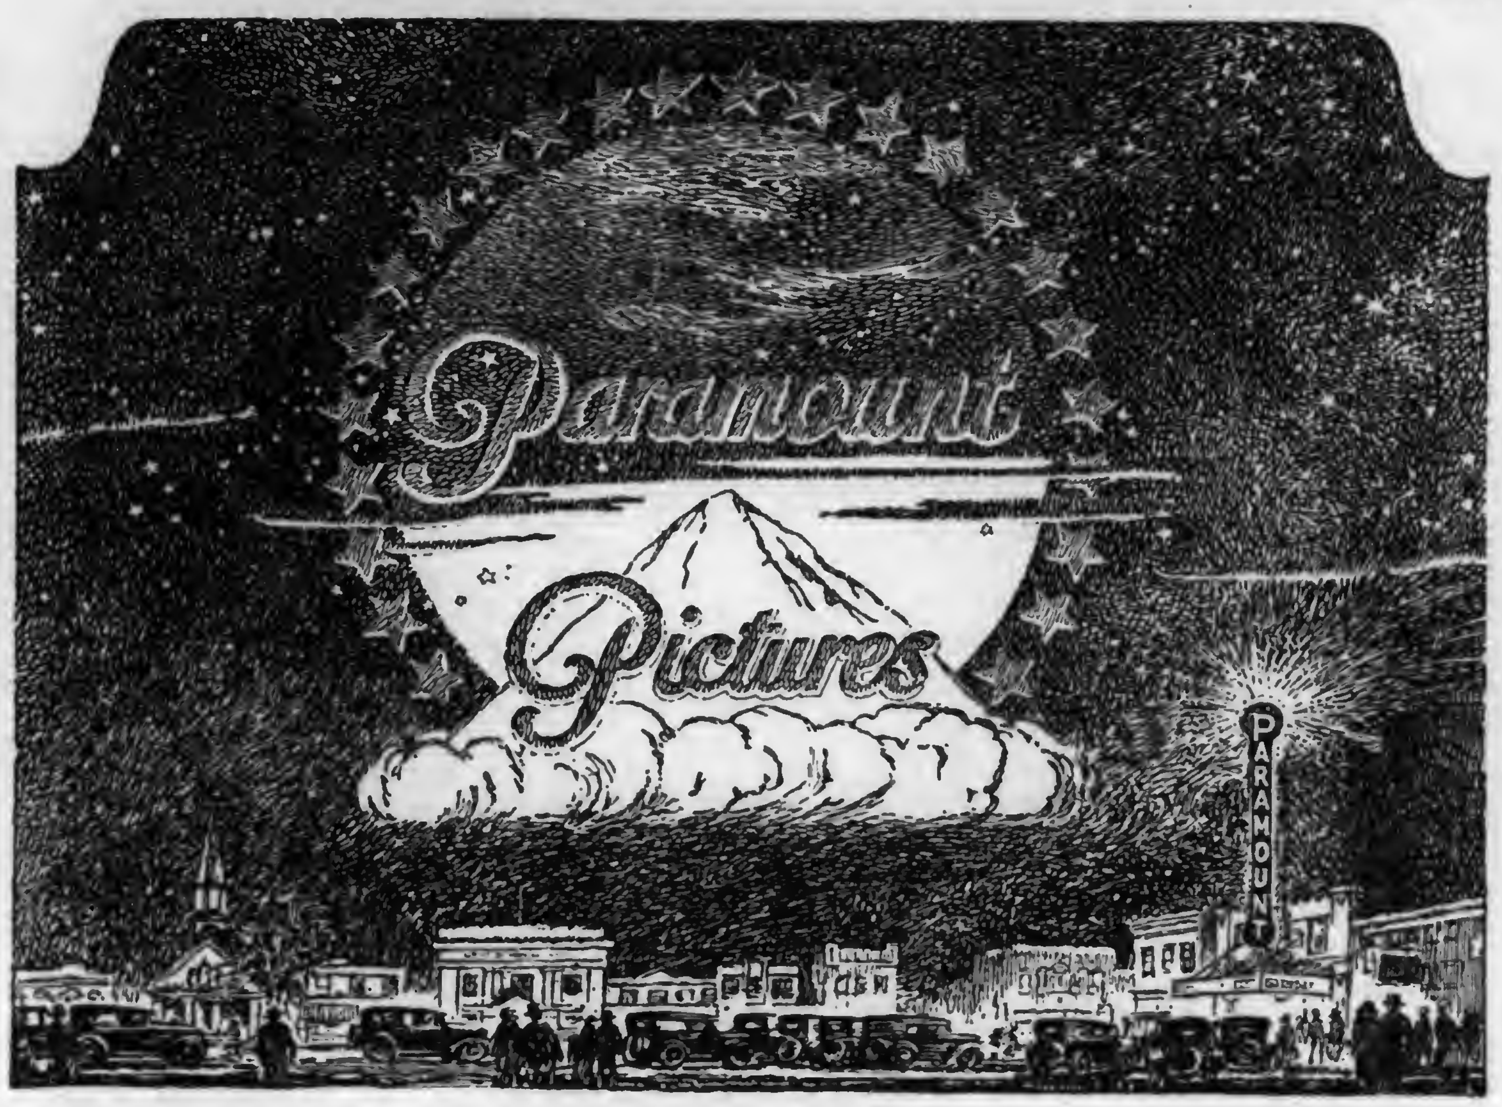
THE treeless slopes and valleys of Palestine are gradually being reforested according to an official statement which states that nearly 00,000 trees and 1,000,0000 vines have been planted in the Holy Land between 1920 and 1924. Palestine became denuded of its forests owing to Turkish misrule and neglect, which resulted in the abrasion of some of the best soil from the hillsides and in the accumulation of malaria swamps in the valleys.

The work of afforestation began forty years ago when the first Jewish settlements were founded, but received a great impetus after the war when, under British mandate, greater opportunities for development were opened for Jews. The government department of agriculture planted 1,285,062 trees during the past four years; the Palestine foundation fund affiliated agencies of the Zionist organization, 672,933 trees; the supreme Moslem council, 700; while the balance were planted by individuals, mostly settlers of the Jewish agricultural colonies.

Dad (sternly)—Where were you last night?

Son—Oh, just riding around with some of the boys.

Dad—Well, tell 'em not to leave their hairpins in the car.



Go to Movies by the
BRAND NAME PARAMOUNT
and you'll go right!

THERE'S been a big difference in quality between various brands of pictures for some years past, and naturally those going to the movies regularly discovered it first.

The same great quality that has made this concern or that the leader in harvesting machinery or automobiles or oil has also made one concern the leader of the motion picture business.

You can *see* the difference, the real superiority in entertainment values in any Paramount Picture.

Don't stay home every evening! Dreams come true with these better pictures, dreams of seeing and sharing all the wholesome excitement that life could give you with youth, beauty and a barrel of cash!

Look back over your own life!

Have you had your share or more of monotony and chores? Begin now to balance work with entertainment and your heart and work will be lighter.

Broadway itself has nothing finer to offer than Monsieur Beaucaire, Wanderer of the Wasteland, Salomy Jane, Grumpy, Flaming Barriers and dozens of other wholesome Paramount Pictures.

Paramount Pictures attract regular visitors and more life to any community. The theatre improves and attracts people from miles away. Make it a real community center—a meeting place for young and old.

Young folks don't quit for the cities when life's worth while at home.

Meet your theatre manager. Every Paramount exhibitor wants to know his patrons, particularly people from out of town. *Encourage him in his choice of the better pictures.*

Protects Your Chicks!

Death clutches at baby chicks in vain when Cholerine stands guard. Just as soon as the chick can drink, put Cholerine in its water. Then diseases such as White Diarrhea, Gape and others are wiped out before they start. Every chick hatched grows into a strong, healthy profit-maker.

Cholerine, given to hens the year 'round, is a wonderful vitality builder. It cleans the glands and intestinal tracts thoroughly, increases egg production and promotes hatchability. These results are guaranteed if you use Cholerine according to directions or your money is refunded.

See Your Merchant

for a free sample of Cholerine and our famous booklet, "Something to Crow About." If he can't supply you, send us his name—we'll see that he does.

Some Soil Fertility Problems

Readers Questions Answered by Doctor Lipman

I have a seven-acre field which I intend to plant to Rural Russet potatoes. The clover on this field was knee high when frozen down. How much fertility will this clover add to the soil per acre? How much fertilizer should I use on this field? Last year I used 1500 pounds of 2-8-10 on corn stubble; also, let me know if it would have been better to plow this field last fall and then replow this spring.—W. K. Bucks County, Pa.

A good stand of clover, knee high, is at least equivalent to two or two and one-half tons of field-cured hay. This would contain 80 to 100 pounds of nitrogen in the portion above ground and would be equivalent to about 600 pounds of nitrate of soda or 300 to 1000 pounds of good tankage.

Crediting the crop with the nitrogen found in the roots and stubble, there would be an equivalent of probably 120 to 150 pounds of nitrogen. This is not as readily available, of course, as it is in nitrate of soda or in tankage. Nevertheless, the clover turned under decays rapidly as the soil warms up and much of the nitrogen is changed into nitrates.

Aside from the nitrogen, clover contains also phosphoric acid and potash, but, since these have been taken up from the soil, there is no actual gain to the land in the total supply of phosphoric acid and potash. On the other hand, one half to three-quarters of the nitrogen in your crop was probably derived from the air and, to that extent, the soil has been enriched in this constituent.

How Clover Enriches Soil

The application used last year, namely, 1500 pounds of a 2-8-10 fertilizer per acre, should be a satisfactory mixture for next year. However, if the season is inclined to be somewhat late, a 3-8-7 mixture would probably render you better service.

It is questionable whether you would have been any better off had you plowed your land last fall. The usual arguments in favor of fall plowing are:

1. Where the soil is very heavy a better tilth is established. When the land is plowed in the fall and the top soil exposed to freezing and thawing, this makes for a better texture and a better tilth. In the case of lighter soils this is of no particular advantage.

2. Where the land is infested with white grubs, cut worms, wire worms, and other soil-infesting insects, fall plowing may be at least partly effective in ridding the land of these insects.

3. From the standpoint of distribution of farm labor, fall plowing is often more convenient than spring plowing.

Losses from Fall Plowing

On the other hand, there are certain distinct disadvantages connected with fall plowing. Where the land is rolling damage may be done by erosion and washing. The more soluble plantfood will be leached out of the soil by winter and early spring rains. Replowing in the spring may become necessary where the land is badly packed. The opportunity is lost for growing some kind of a cover crop on the land for increasing the supply of vegetable matter and perhaps also nitrogen in the soil.—J. G. L.

May Need to Add Filler

We are using 300 to 400 pounds per acre of a mixture of four 200-pound bags of twelve and one-half per cent kainit and six 200-pound bags of sixteen per cent acid phosphate.

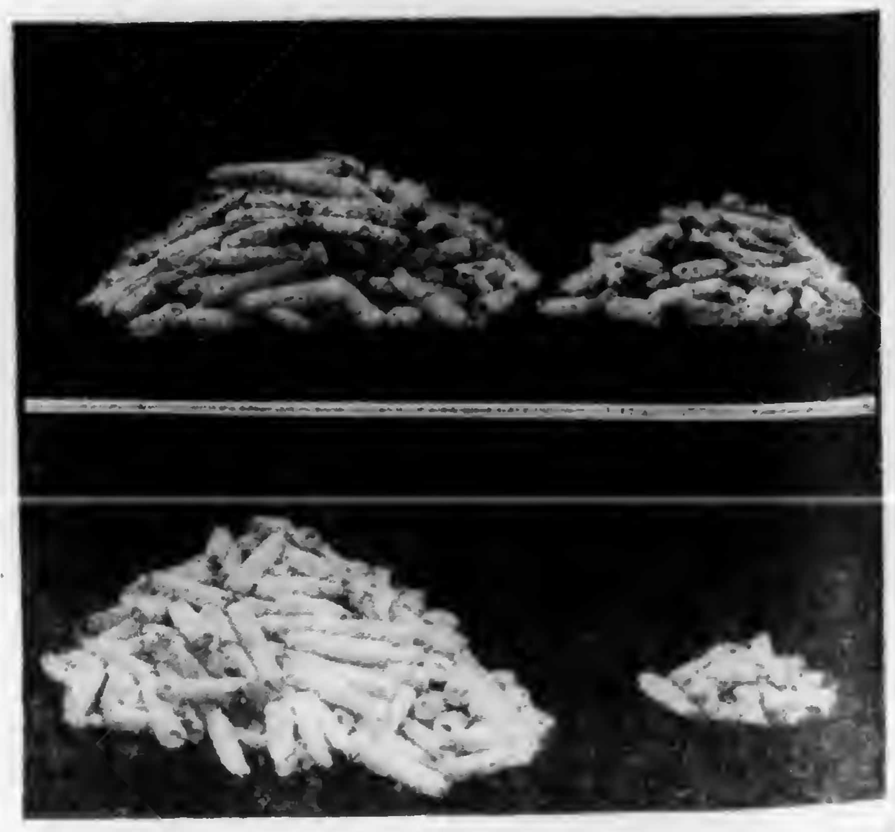
Could I benefit by using muriate (forty-eight per cent) of potash or eighteen or twenty per cent acid phosphate and using smaller amount per acre, or would I have to use a filler?—F. M. G., Sussex County, Del.

Assuming that the maximum, namely, 400 pounds per acre, is used of the mixture of 800 pounds of kainit and 1200 pounds of acid phosphate, you would be applying per acre an equivalent of about 160 pounds of kainit and 240 pounds of acid phosphate. This would correspond to 20 pounds of actual potash and about 38 pounds of phosphoric acid.

If muriate of potash is used instead, roughly, 40 pounds per acre would be substituted for the 160 pounds of kainit; and, if 20 per cent acid phosphate is employed, about 200 pounds per acre, in round figures, would be substituted for the 240 pounds of 16 per cent acid phosphate. This would give you a total application of 240 pounds per acre.

A good fertilizer drill should be able to handle this quantity. However, if necessary, 100 to 200 pounds of a sifted loam soil might be employed as a filler, and the cost of the fertilizer perhaps reduced somewhat in view of the saving in transportation. Both acid phosphate and potash salts are somewhat higher now than they were a year ago.—J. G. L.

Fertilizer Reduced Soft Corn Losses



Above: Corn from unfertilized plot, showing large percentage of soft ears (right). Below: The fertilized plot had few soft ears See Page 15

FERTILITY SAVED CORN

Untreated Plots Had the Most Soft Ears in 1924

ONLY 18 per cent. of the corn crop of the Corn Belt matured in 1924, as against a usual average of per cent. The experiences of practical corn growers and tests by experiment stations show that soft corn can be almost entirely prevented by proper soil treatment, including the judicious use of fertilizers.

The Indiana Experiment Station reports that in a test at LaFayette only 64 per cent of the corn on an unfertilized plot in 1924 was marketable. Manure increased the marketable corn to 89.5 per cent., and acid phosphate added to manure further increased this to 95 per cent.

Two Plots Show the Difference

On another set of plots, corn without special treatment yielded 36 bushels of marketable corn, containing 25 per cent moisture, and 12 bushels unmarketable corn, containing 38 per cent moisture.

The corn grown with a complete fertilizer yielded 42.5 bushels of marketable corn, containing 22.5 per cent moisture, and 12 bushels unmarketable corn containing 35 per cent moisture.

The photographs on the opposite page show the effect of fertilizer in an experiment which has been carried on for several years near Scottsburg, Indiana. The two piles above came from an unfertilized plot which yielded 30 bushels per acre, with a large proportion of soft corn. The two piles shown in the lower portion of the picture came from a plot that received 200 pounds per acre of 2-8- fertilizer and that yielded 66 bushels per acre with only a very little soft corn.

The Largest Corn Show

THE final germination tests made on 266 individual ears of corn entered by Pennsylvania farmers in the nation-wide seed corn test show held recently in Chicago under the auspices of the Sears-Roebuck Agricultural Foundation, showed that twenty-eight out of every 100 ears of this specially selected seed corn from fifty-two Pennsylvania counties would not germinate.

The exhibit had five times as many entries as were ever assembled at any corn show in the world before. Over half the counties in the United States were represented in the competition. Exactly 27,411 individual ears of corn were tested for germination power and disease resistance and then judged by a committee of experts recommended by the American Society of Agronomy.

The Pennsylvania state sweepstakes winner for the best ear of corn among the 266 entries from this state was W. A. Townshend, Smithfield, Fayette County.

How to Prove the Value of a Feed

You may try every kind of test but there is only one way of absolutely proving the nutritive value of feed; that is by results in actual feeding.

This is true whether the feed is a single ingredient or a combination of ingredients. In a mixed feed you may find every ingredient in accordance with your theory of what is best to have in a dairy feed and yet it may be of little value in actual feeding. The results obtained depend on the way in which the ingredients are *proportioned.*

TI-O-GA Dairy Feeds not only contain the best ingredients, but the ingredients are combined into finished products that will produce the best results.

As finished products and not as *mixtures of ingredients* give them the only practical test, the test of feeding, and judge their merit by results.

Red Brand Ti-o-ga Dairy Feed to be fed with low protein succulent roughage; Silage, Pasturage, Green Fodder, etc.

White Brand Ti-o-ga Dairy Feed to be fed with medium protein dry roughage; Timothy Hay, Mixed Hay, Corn Fodder, etc.

Blue Brand Ti-o-ga Dairy Feed to be fed with high protein dry roughage; Clover Hay, Alfalfa Hay, etc.

If your dealer can't supply you, write us.

TIOGA MILL & ELEVATOR CO. Waverly, N. Y.

Use the TI-O-GA Dairy Feed which forms a balanced ration with your own roughage.

TI-O-GA FEED SERVICE

HOW LONG Will My Silo Last?

Will it get out of shape and eventually fall? Can I depend on it to do its job year after year? Will it continually need repairs, causing me a lot of trouble and expense? Can I forget it or must I worry about tightening lugs or loops? Will it keep my silage in the proper succulent condition?

The Craine owner has no such worries. After his silo is up he simply uses it season after season without thought of its condition. It's a *strong, handsome, durable, weather proof* and *frost resisting* structure that will *stand up* and *save money* for *many years.* Write today for catalog and descriptive literature.

Some Grain Lost When Silo Is Filled Too Late

I erected a silo last fall and like it very much, except that I notice a lot of whole corn in the manure. There seems to be so much waste this way that I am thinking of taking the ears off next year before I put the corn in the silo. What do you think about it?—C. G. H., Berks County, Pa.

Your corn was probably quite mature when you put it into the silo. Some of the grains were so dry and hard that they passed the cows undigested. Next year if you will put the corn into the silo when the stage of maturity is such that the kernels are just nicely dented and before reaching so mature a stage as that of the past year, you will probably have no trouble.

Even tho some few kernels do pass thru the cows, you will get more benefit from your corn crop if harvested thru the silo than if you were to husk the corn and put the stover only into the silo. Experiments have been run at various stations to determine this fact.

In the first place there is a greater loss thru fermentation when corn is cured in the field as compared with when it is put into the silo. In the second place, silage is more palatable and appetizing than is the dried fodder or corn stover silage. It has a good effect on the alimentary tract, and keeps the digestive system in good order. In the third place, the cows produce more milk from the corn silage than on the dried material.

Always Paid to Ensile Corn

At Vermont, an experiment was conducted in which two rows of mature corn extending across the field were placed in shocks, while the next two rows were run thru the feed cutter and placed in the silo. By thus alternating until the silo was filled, substantially equal quantities of material having the same composition were obtained as silage and shock corn respectively. The field cured corn fodder after having been run thru the cutter was fed in oppo tion to the silage to dairy cow along with equal quantities of ha and corn. The silage method of har vesting the corn crop produced ele en per cent more milk than the dr corn fodder method. In fact, nin trials at four different experim stations, show that the corn sila produced more milk than the co fodder.

Very Little Silage Is Wasted

The accompanying table tells t story.

It is evident from the table th 100 pounds of dried matter in t silage ration produced on an ave age 7.4 pounds more milk than equal amount of dried matter in fodder ration. The great advanta of the corn silage over the dried f der is largely due to the fact th the silage is eaten with little or waste. While a considerable part the corn fodder is usually left u eaten.

In view of these facts, it wo seem advantageous for you to your entire corn crop into the rather than to remove the ears ensile the stover. Very little c will pass thru the cows if the c is ensiled just as the kernels getting well dented. The labor w be less than when the ears are h ed from the fodder, and the sil will be more appetizing and of hi er food value when the corn ears well as the stover all go into silage at one time. The plan of moving the ears before ensiling been tested out at the Wisco station and at the Vermont sta with unsatisfactory results, the mal corn silage having proved su rior.—A. A. B.

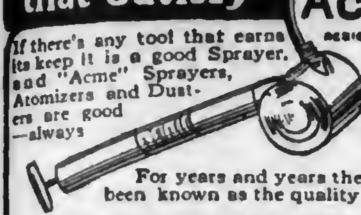
Garlic Produces Results Quickly

ONE minute after garlic is eaten by a cow the disagreeable flavor and odor of this pungent plant may be detected in the milk. This is one of the facts brought out in an investigation carried on by the Bureau of Dairying, United States Department of Agriculture, and reported in "Effect of Garlic on the Flavor and Odor of Milk," by C. J. Babcock. The only practical way to prevent the appearance of this flavor and odor in milk in regions where the weed infests pastures is to keep the cows from eating the plant.

In the tests, which were made by giving to several persons samples of milk from cows milked at different periods after having been fed garlic and from check cows, it was found that the intensity of the bad flavor and odor increased until it reached a maximum at ten minutes after feeding the odorous ration. Not only were the garlic flavor and odor taken in by eating, but it was shown that inhaling garlic for ten minutes gives strong flavor and odor to the milk

Copies of Department Bulletin 1326, which reports the results of these tests, may be obtained free, as long as the supply lasts, from the United States Department of Agriculture, Washington, D. C.



Hand Sprayers that Satisfy

TRADE MARK ACME REGISTERED

Report on Butter Costs

THE report on butter production costs in Denmark, as compared with the cost of producing butter in the United States, made as a result of an investigation conducted by the United States Tariff Commission, is an excellent piece of work.

The investigators found that the farm cost of producing the butterfat in a pound of butter in the United States is 49.85 cents; in Denmark, 36.28 cents. The cost of landing butter produced in the United States at New York City is 56.03 cents per pound. The cost of producing butter in Denmark and landing it in New York is 41.11 cents per pound. This would justify a tariff of 14.92 cents per pound on butter, based on costs from the farm to New York. On the other hand, figures based on what the farmers receive for butterfat in the United States and in Denmark would justify a tariff on butter of between four and five cents a pound.

Which Method Shall Be Used?

The big question now is, which method of arriving at costs will be followed by the Tariff Commission as a basis in conducting the public hearings on the butter tariff to begin April 21, and in making its recommendations to the President as to a change in the butter tariff.

It is probable that spokesmen for the dairymen will undertake to convince the commission that it was the intent of Congress that the basis for recommendations should be the farm costs of producing butterfat, rather than prices paid the dairymen for butterfat in the two countries.

This is really an important question, according to those who have given the matter consideration. The tariff is due for another revision when Congress meets next fall. If farm production costs are to be used as the basis of agricultural tariff schedules it will mean adequate protection for the farmers on all products that are affected by the tariff. If the rate of duties on farm products is based on difference in prices paid the farmers in this country and abroad it will give the farmers tariff rates which will be little better than none at all.—R.

National Judging Contest

A SECOND National Farmers' Dairy Cattle Judging Contest is to be held at the National Dairy Exposition at Indianapolis, October 10 to 17. The contest will include amateur individuals and amatuer teams. Every man or woman who has never acted as a judge at any fair or show or served as a college instructor, an agricultural agent, an agricultural teacher, or represented a college at an interstate or national contest, is eligible as an amateur individual.

An amateur team consists of three persons, with the same qualifications as amateur individuals. Teams may be chosen in a number of ways. They may be nominated by the farm bureau, Grange, farmers' clubs, state, district or county breed or dairy association, cow testing association or county agent.

Each contestant may be required to judge three classes of animals of the same breed consisting of four cows, four heifers, and four bulls. Classes will be chosen from the Ayrshire, Brown Swiss, Jersey, Guernsey and Holstein breeds. Prizes will include gold, silver, and bronze medals for the first, second, and third winner in each class. Those scoring ninety or over who do not receive a medal will be awarded a diploma.

Applications by individuals or teams for admission to the judging contest shall be made on blanks supplied by the National Dairy Exposition. They should be filed with the manager at Indianapolis on or before October 3, but will be accepted later if the classes are not too crowded.—A. L. B.

A Dairyman Asks Questions

Amount of Plant Food Taken from Soil by Crops

I had a good field of ensilage corn last summer. It was cut by a harvester, and set up in large shocks. It is in fine condition. I run it thru a small cutter, operated by a gasoline engine, and the cows eat it up clean.

How much of the feeding value is lost compared with the loss on corn that is put into a silo?

(2) What is the analysis in feeding value of ensilage corn cured in the field, ensilage in the silo, alsike clover, medium red clover, mammoth red clover, sweet clover, alfalfa, timothy, oats?

(3) How much nitrogen, potash, and phosphoric acid, does a corn crop use that would yield twelve tons of ensilage per acre, or field corn that would yield 100 bushels of ears per acre?

(4) How much of the same plant food would oats remove per acre, with a yield of forty bushels per acre?

(5) How much would a thirty-bushel wheat crop remove of the same plant food?

(6) How much nitrogen, potash, and phosphoric acid would the different clovers remove, or add to the soil yielding two tons per acre?

(7) How much of the same plant food would be added to or removed, by a crop of timothy yielding two tons per acre.

(8) What would be the analysis of good stable manure, cows fed on ensilage and timothy hay, and grain? The usual amount of grain fed to a dairy cow.

(9) What would be the analysis of manure, cows fed on all clover hay and the same amount of grain?

I would appreciate any information which you could give me on the questions asked.—H. K., Crawford Co., Pa.

I will answer your questions in the order you have listed them. Slightly more of the feeding value of your corn crop is lost by harvesting it in the manner you mention. Trials at various experiment stations show that even when cured in well-made shocks so as to reduce the losses to a minimum, corn fodder or corn stover standing in the field but a few months loses on the average about twenty per cent of the dry matter it contains, due to weather and to fermentations which gradually waste the forage.

Silo Reduces Losses

On the other hand, considering all the available data, it may be concluded that in a silo thirty feet deep or over, the total loss of dry matter should not be over fifteen per cent if reasonable care is taken to pack the silage and to reduce the losses at the surface of the silage after filling. It is evident, therefore, that the losses of dry matter are about five per cent lower when the crop is ensiled than when it is cured as dry fodder. Experiments indicate that there is an even greater difference in the loss of crude protein.

2. The following table gives the comparative feeding value of the various crops mentioned above:

	Dig. Protein per cwt.	Total Dig. Nutrients per cwt.
Ensilage Corn Fodder.	2.2	39.9
Corn Silage	1.1	17.7
Alsike Clover Hay ...	7.9	47.3
Med. Red Clover Hay.	7.6	50.9
Mammoth Red Clover Hay	6.4	47.6
Sweet Clover Hay	10.9	50.7
Alfalfa Hay	3.0	48.5
Oats Straw	1.0	45.6

3. Twelve tons of corn silage removes the following amounts of fertility from the soil: 81.6 pounds of nitrogen; 38.4 pounds of phosphoric acid; 105.6 pounds of potash. If you allow a value of 20 cents a pound for nitrogen, 7 cents a pound for phosphoric acid and 7 cents a pound for potash, these amounts of fertility would have a total value of $26.40.

A field of corn that would yield 100 baskets of ears, or fifty bushels of corn weighing 70 pounds to the bushel, and corn stover at the rate of one and one-fourth tons per acre, would remove the following amounts of fertility from the soil: 71.05 pounds of nitrogen; 30.3 pounds of phosphoric acid; 50.75 pounds of potash. At the prices already mentioned for nitrogen, phosphoric acid, and potash, this would mean $19.98 worth of fertilizer.

Chemical Analysis of Crops

4. A crop of oats giving 1600 pounds of straw and 40 bushels of oats per acre would remove 34.64 pounds of nitrogen, 13.77 pounds of phosphoric acid and 31.17 pounds of potash, worth $9.08 at the prices mentioned.

5. A crop of wheat yielding thirty bushels per acre and 3,000 pounds of wheat straw would remove 50.6 pounds of nitrogen, 19.4 pounds of phosphoric acid and 31.7 pounds of potash worth $13.70.

6. The following table gives the amounts of nitrogen, phosphoric acid and potash in two tons of different kinds of clover hay:

	Nitrogen. Lbs.	Phosphoric Acid. Lbs.	Pota Lb
Alfalfa, 2 tons...	95.2	21.6	83
Red Clover, 2 tons	82.0	15.6	63
Alsike - Clover, 2 tons	82.0	28.0	69

The clovers and other leguminous crops are different from cereal crops and grass crops, in that the nitrogen gathering bacteria take in nitrogen from the atmosphere and store it in the nodules or other roots. It is likely that in view of this fact there would be very little loss of nitrogen from the soil where a crop of clover hay was grown.

In other words, the nitrogen content of the soil is practically the same after the crop of clover hay has been grown as prior to that time, at least it will be as soon as the roots of the clover plant decay. The losses, therefore, of fertility for clovers is practically limited to the phosphoric acid and potash contents of the crop.

Timothy Doesn't Replenish Nitrogen

7. A crop of timothy hay yielding two tons per acre contains 3[illegible] pounds of nitrogen, 12.1 pounds [illegible] phosphoric acid and 54.5 pounds [illegible] potash, having a total value at commercial fertilizer prices of $12[illegible]. This value of fertilizer is practically all removed from the soil, since nitrogen-gathering bacteria do not thrive on the roots of timothy grass.

8. The composition of one ton of average manure from a dairy [illegible] runs as follows: Water, [illegible] per cent; nitrogen, 12 pounds; phosphoric acid, 3 pounds; potash, 9 pounds; value $3.24.

It is difficult to tell just how much greater the value of the manure would be provided the cow was fed clover hay instead of timothy hay and silage. The value naturally would be a few cents higher per ton with clover hay as the roughage.—A. A. B.

If It Can Be Sold It's Cash

Arithmetic Shows Which Rations Are Cheapest

WITH the low price of milk which dairymen have received for the past year, a great many of them are thinking about cutting down the cost of production. Cash and cost too often mean the same thing to the farmer, and, in order to accomplish a real reduction in the cost of production, he should get a clear idea of the difference between the two.

An old farmer of my acquaintance once went to the blacksmith to have his horses shod; he explained to the blacksmith that he was short of cash, asking if he would take some farm product for his bill. The smithy said he could handle potatoes, to which the old fellow replied "Taters are cash. Can't you use pumpkins?" This old fellow knew that any thing which had a market value was cash, a piece of information not appreciated by some farmers.

Any product fed the dairy herd has a cash value and should be charged against the herd. The fact that it was produced on the farm does not mean that it is necessarily the most economical.

Expensive Ration, Tho Home Grown

Figure ground corn at $2.00 a hundred and ground oats at the same price. A mixture of corn nd oats costing $2.00 a hundred would contain about nine per cent protein. The protein in this mixture would cost about twenty-two cents a pound. The protein in a twenty-five per cent prepared dairy ration, at the same rate, would make the ration cost $5.50 a hundred, about twice what it can be bought for.

Suppose, for economy, the farmer is feeding a mixture of corn and oats; equal parts, and mixes once a week, say 300 oats and 300 corn. The 600 pounds of feed will contain about fifty-one pounds of protein. He feeds this mixture because it requires no cash as he has raised it. He feels the concentrates are too expensive.

Suppose he sold 150 pounds of corn. This would bring him $3.00, the cost of a sack of cottonseed meal. Should he mix the remaining 300 pounds of oats, the 150 pounds of corn, and the 100 pounds of cottonseed meal, he would have 550 pounds of feed which cost him the same as his 600 pounds of corn and oats which was $12.00.

Cutting the Cost of Protein

How about this protein, tho? In the corn and oats mixture he only had fifty-one pounds of protein for his $12.00, and it was costing him twenty-four cents a pound, while in the latter ration he had eighty-three pounds of protein for his $12.00, or his protein only cost him about fourteen and one-half cents a pound.

This ration of corn, oats, and cottonseed meal is not given as an ideal ration, but merely to show that it is cheaper than corn and oats.

There is no economy in entirely disregarding the needs of a cow. In feeding one should use the same reasoning in selecting a cheap feed that one uses in buying fertilizer.

To economize in feeding costs, one should figure the cost of protein in each feed, and figure out a ration using as much of the protein that is low in cost as is safe. If the farmer can sell protein for twenty-five cents a pound and buy it back for seven and one-half cents, he should do it. At the present market prices, he can do it, and those who are getting ahead are doing it.—J. S., Columbia County, Pa.

Club Boy's High A. R. Record

EXCEEDING all anticipated records of production of butter and milk by an animal owned by any club member in New Jersey, William Campbell's three-year-old Holstein, Hedgemere Korndyke Pieterje, 742,-705, has just recently completed an official seven-day record in which she milked 573 pounds or slightly over forty quarts a day and made 29.03 pounds of butter.

Considering that this record was made by a farmer with no experience in feeding for official testing, experts are agreed that Hedgemere Korndyke Pieterje is one of the outstanding Holsteins in New Jersey, and, no doubt, in the hands of an experienced feeder would have exceeded her present official record easily and have gone on record as a thirty-pound three-year-old or better

She Was a Heavy Eater

It is remarkable how much feed is consumed by this animal. Starting the first day with a mixture which was recommended by an experienced tester, William's cow received twenty pounds of grain daily, plus one-half pound of linseed meal at each feeding, making a total of twenty-two pounds of grain. In addition to this she consumed 120 pounds of [illegible] day and had three varieties of the best possible hay, including alfalfa, clover and mixed hay. Gradually the feed was increased until near the end of the test the cow was receiving twenty-four pounds of grain a day, plus three-quarters pound linseed meal at each feeding, making a total of twenty-seven pounds of grain a day.

The highest day's milking was 84.3 pounds, while the greatest amount of fat made on the same day, was 3.52 pounds. This official record makes this Holstein animal the leader in New Jersey calf club work. The owner, William Campbell, will continue to milk her four times a day until a thirty-day period is up. Then she will be milked three times a day, and gradually, as her milk decreases, she will be put on twice-a-day milking.

William Campbell is seventeen years old. He managed and fed the heifer thruout her seven-day official test period.

This is the heifer that produced 1100 pounds of milk during her first lactation period and made a net income, thru prize money, sale of first calf and income over feed cost, of $492 up to the end of her first lactation period. This is believed to be a United States record in net income made by any calf club heifer during her two-year-old milking period.

This is veracious: A clergyman from Cambridge, Mass., had occasion to preach to the inmates of an insane hospital. During his sermon he noticed that one of the patients paid the closest attention, his eyes riveted upon the preacher's face, his body bent eagerly forward. Such interest was most flattering. After the service, the speaker noticed that the man spoke to the superintendent, so as soon as possible the preacher inquired:

"Didn't that man speak to you about my sermon?"

"Yes."

"Would you mind telling me what he said?"

The superintendent tried to sidestep, but the preacher insisted.

"Well," he said at last, "what the man said was, 'Just think, he's out and I'm in.'"

An Investment — not an Expense

A sufficient supply of protein—an *excess* supply—is the key to your feeding profits. It has been proven time and again by the most practical experiences and experiments. Linseed Oil Meal supplies this excess very profitably—and in addition is a safe and splendid conditioner.

Thus, while costing more per ton than corn, oats or bran, Linseed Oil Meal shows a splendid profit in balancing rations of home grown foods. Lubricating oil costs more per gallon than gasoline, but what person would attempt to run a gasoline engine on gasoline alone without enough oil?

The effect on live stock of a judicious use of Linseed Oil Meal is soon apparent in a thrifty appearance, a pliable skin, a sleek, oily coat, and a good "handling" quality of the flesh. Due to its tonic and regulating effect, Linseed Meal is especially useful as a conditioner for animals which are run down or out of condition.

Just how, when and why to feed it for the best and cheapest gains in fat, milk, pork and wool, is told fully in Prof. Morrison's book, "How to Make Money With Linseed Oil Meal." Written by one of the World's greatest feeding authorities, you'll find this book mighty valuable. Send for your free copy. Ask for Booklet E-4.

White Diarrhea

Splendid Success of Mrs. Ethel Rhoades in Preventing White Diarrhea

Mrs. Rhoades' letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Rhoades tell it in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. My first incubator chicks when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the **Walker Remedy Co., Dept. 518, Waterloo, Ia.,** for a $1.00 box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."—Mrs. Ethel Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. C. M. Bradshaw writes: "I used to lose a great many chicks from White Diarrhea, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept. 518, Waterloo, Iowa,** for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail."—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.

You Run No Risk

We will send WALKO White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of WALKO (or $1.00 for extra large box)—give it in all drinking water and watch results. You'll find you won't lose one chick where you lost dozens before. It's a positive fact. You run no risk. We guarantee to refund your money promptly if you don't find it the greatest little chick saver you ever used. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee.

WALKER REMEDY CO., Dept. 518,
Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

The Prospects for Beef, Mutton and Pork Producers

CONDITIONS have favored an unprecedented slaughter of hogs during the last two years, the peak occurring in 1923, according to figures issued by the Bureau of Animal Industry, United States Department of Agriculture. Cattle reached the highest point a year later and the total for all animals in 1924 was 119,980,500, or about one and one-tenth animal for each man, woman and child of the population. This total is far ahead of all previous figures, and is about 850,000 more than the total for 1923, which was the previous high. However, the high record for meat production remains with 1923, which means, of course, that the animals marketed that year averaged somewhat heavier than was the case in 1924. Stockyard records show that cattle and swine were several pounds a head lighter during 1924, but that there was little, if any difference in the weight of sheep and lambs.

Cattle, and swine, it may be noted, are fattened chiefly on corn, the farm price of which on December 1 last was ninety-nine cents a bushel as compared with seventy-three cents the preceding year, and sixty-six cents in 1922. Hence fattening was considerably restricted during 1924 because of the high price of the feed.

Price Restricts Corn Fattening

Following are the slaughter totals of the various animals for the last two calendar years.

TOTAL SLAUGHTER OF FOOD ANIMALS, 1923-24

	1924	1923
Cattle	14,399,700	13,882,600
Calves	9,466,300	8,824,200
Sheep and lambs	15,396,100	14,818,200
Goats	92,300	75,400
Swine	80,626,100	81,532,600
Total....	119,980,500	119,133,000

Foreign Trade in Meat and Lard

The United States stands first among the stock-raising countries of the world, and so would naturally be considered among the foremost in regard to the abundance and surplus of its meat supply. Some other important livestock countries, as Argentina and Australia, which are sparsely populated and have large surpluses of beef and mutton, are now the principal factors in supplying the European deficit in these classes of meat.

It must be remembered, too, that the United States has many more mouths to feed than any of the other meat-eating countries, and, moreover, has to provide a much heavier meat ration for its people than any of the European countries. The teeming populations of Asia and the Orient, it is well known, eat comparatively little meat, and while the United States has approximately one-sixteenth of the world's population, it has within its borders about one-seventh of the recognized breeds of food animals.

U. S. Leads in Pork Production

We annually export from twelve to fifteen per cent of our total production of hog products. The combination of hog and corn in the United States is supreme, and American pork, and especially lard, are found in practically every country of the globe.

In recent years we have produced barely enough beef to meet the consumption demand. The production of mutton is inconsiderable as compared with pork and beef, and but little of it is imported largely because the national appetite for meat of the ovine species is quite small. For example, were the people of the United States to eat as much mutton and lamb proportionately as those of Britain do, it would be necessary, on the basis of the last two years' consumption, to increase our production seven-fold.

The total meat consumed has steadily increased each year for the last six years, but the ever-increasing population reduced the per capita consumption about one pound in 1924. There was a falling off of two pounds in pork, but an increase of one pound in beef and veal.

Our Meat Diet

The per capita consumption of each kind of meat and lard for the last three years is shown in the following table:

PER CAPITA CONSUMPTION OF MEAT AND LARD

	1924	1923	1922
Beef	62.6	62.1	61.0
Veal	8.3	7.9	7.3
Mutton & lamb...	5.2	5.2	5.0
Pork (except lard)	88.8	90.8	75.6
Total meat.....	164.9	166.0	148.9
Lard	15.8	16.2	14.0
Total meat & lard	180.7	182.2	162.9

Estimates show that stocks of meat animals as well as of feeds are by no means so plentiful as they were a year ago, while on the other hand our population will doubtless make the usual increase of about 1,500,000 each year. The indications therefore point to a shorter supply of meat during the next year or two at least.

Indiana County Leads in Purebred Sire Work

WITH the organization of the first abortion tested bull association in the United States, Indiana County, Pennsylvania, takes the lead in this line of dairy improvement. There are now four active bull associations in Indiana County with fifteen cooperatively owned bulls.

The new Holstein bull association has three outstanding sires. Two of them are grandsons of King Pietertje Ormsby Piebe and one is a grandson of King Ona. All three show desirable breed type and have excellent pedigrees which include a large number of high yearly records. These bulls were selected by a committee consisting of a representative of each block, County Agent Warner and S. J. Brownell, State College dairy extension specialist.

In the Marion Center Jersey Bull Association, daughters now show an increase of more than thirty per cent in milk production over the amount produced by their dams. In the Lovejoy Jersey Bull Association the daughters' average production is now more than fifty per cent above the average production of the dams which were in the herds when the association was first organized. Milk production in many herds in this association has been doubled in five years, largely as a result of the use of good sires.—A. L. B.

End Losses From Lice!

When setting hens are dusted with Pratts powdered lice killer the baby chicks do *not* have lice. Not a bird in your flock has to have lice or mites. Not one of them *will* have, if you'll just use Pratts.

The powder knocks lice if you mix it in the dust bath. Use the salve on the birds' bodies, or the ointment on chicks' heads. And Pratts red mite special will put the same swift end to those pests.

There are two important reasons for using Pratts, and not just any lice killer. First, because Pratts is *non-poisonous*. Second, it has no filler, *it's all killer*, and therefore the most *economical*.

War on Disease

PREPAREDNESS for war against animal disease has been carried out by the Bureau of Animal Industry, United States Department of Agriculture, to an extent little realized by the general public. Diseases that the average man never heard of, and some which do not exist on this continent, are studied and, when possible, specific weapons are forged for their control should they appear within our borders.

Conspicuous among these destructive animal plagues is rinderpest, the most deadly of the disease of cattle, which occurs in Asia, Africa, and certain parts of Europe, and recently broke out in Australia, where it was eradicated by slaughtering all infected and exposed animals, the same method as is used to suppress foot-and-mouth disease in this country.

How Serum Is Made

Rinderpest has never broken out in the United States but if it should appear the Bureau of Animal Industry is prepared to take immediate steps to wall off the infected area by inoculating all cattle in a belt surrounding it. Quick protective action of this sort will be possible in such emergency because the Bureau has in cold storage at Washington a large supply of rinderpest serum which will produce immunity in cattle inoculated with it.

The serum is produced in the Philippines where the disease has existed for a long time. Cattle which have recovered from the plague are hyperimmunized by injecting into their blood active virus of the disease, which gives them still more resistance to it. The serum is made from the blood of these animals. This serum in cold storage fortunately will retain its protective power for several years. The immunity acquired by treating cattle is lasting.

Large Supply on Hand

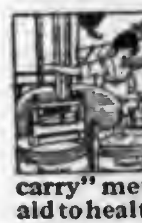
A supply of serum has been kept on hand at the Bureau for the past six years. Enough of it is kept available to inoculate several thousand head of cattle.

Since a serum for foot-and-mouth disease has been known for a number of years, there arises the natural question as to why this disease has not been fought with serum instead of rifles and burial in lime. Foot-and-mouth disease could be controlled in the same way if the serum had the lasting qualities of rinderpest serum. Unfortunately the serum from cattle immune from this well-advertised plague has little potency. Furthermore, the immunity, when it is conferred, lasts only six weeks.

Cause of Lightning Marks

AFTER a person has been struck by lightning, especially when no serious injury is sustained, it is not uncommon to find somewhere on the patient's body ramifying pink marks, which generally disappear in the course of a day or two. These marks bear a general resemblance to trees or the venation of leaves, and were at one time supposed to be the photographic images of such objects, produced in some mysterious way by the lightning. It is now known, however, that these marks are not photographs, but are merely the lesions due to the passage thru the tissues of a branching electrical discharge.—Weather Bureau, U. S. D. A.

A private "waterworks" *for a few cents a day*



Next to food, clothing and shelter, water under pressure is the greatest need on the modern farm. It brings up-to-date *sanitary* conveniences to the home. It saves the drudgery of old-time "pump, pail and carry" methods. It is an exceedingly valuable aid to health and happiness in your family, and a healthy condition among your livestock.

Where there is life there is need for running water

For only a few cents a day you can have all the water you need—whenever and wherever you want it—in kitchen, bathroom, laundry, barn, watering trough, milkhouse—*any place*. All without the backbreaking necessity of pumping and carrying gallon after gallon of water daily.

There is a Fairbanks-Morse Plant for every requirement

Whether your source of supply is a cistern, spring, lake, stream, shallow well or deep well, there is a Fairbanks-Morse Home Water Plant that will serve you perfectly.

These plants can be furnished to operate on electric current, gasoline or kerosene. The electric outfit is automatic in operation—self-starting, self-priming, self-oiling. Attaches to any electric light circuit.

Just like city service at a fraction of the cost

These plants are quickly and easily installed. The entire cost of a complete installation is small. *And the cost of operation is only a few cents a day.*

"It's Automatic"
200 gallons per hour electric plant
Also larger sizes

Like all other Fairbanks-Morse products these home water plants are noted for their high quality, their long life and their absolute dependability under every condition. When you make this investment you can be sure that you are buying the finest the market affords. Yet you get the advantage of exceedingly low prices made possible by our large production.

Your local Fairbanks-Morse dealer will gladly furnish you with complete information and give you a free demonstration. Send the coupon for our latest literature which will be mailed to you free and without any obligation on your part.

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I live on a farm of ninety-five acres four miles from New Hope. I am nine years old and go to Buckmanville School. My father has a herd of twenty Guernsey cows, part of which are registered.

Each summer I visit my cousins near Newtown. We go bathing and have picnics.

We had good sleighing for a month last winter and I went coasting a lot after school. I am in the fourth grade in school. At school we play volley ball and tag. I feed the chickens and hunt the eggs.—Horace T. Smith, Bucks County, Pa.

Dear Cousin Ruth:—I am eleven years old and live on a farm. I like to help my dad work around the barn. I have some pets. I have a dog and he will pull my wagon and play with me, and I have a horse about fifteen years old. He doesn't have to work any more. I have two sisters. They have cats for pets. I go to school and like school very much.—George O. Plock, Montour County, Pa.

Dear Cousin Ruth:—For a pet I have a dog named Shep. His color is brown and white. I love to play with him; his favorite game is "I spy." I also have two pet bantams.

I live on a small farm and my sister and I have to do a little work such as hoeing and raking. I also have a little sister aged three and she can't do much work.

I am twelve years old. I go to Hubbard's School and am in the seventh grade.—Evelyn Engle, Caroline County, Md.

MR. SQUIRREL,
Edward Jameson, Montgomery Co., Pa.

Dear Cousin Ruth and Forum Friends:—I am fourteen years old and am in the eighth grade at school. I go to Santz School and do not have far to go. I live in the country and love it very well.

How many are glad spring is coming? I am. I love to hear the dear little birds singing in the morning from their perches in the tree tops. Soon the flowers will be peeping above the ground showing their sweet faces to the sun. I suppose the boys are busy flying kites and the girls are busy playing outdoor games.

March, the dear old windy month, has come again.—Goldie M. Nudig, Northumberland County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been reading Pennsylvania Farmer for a long time and get more interested every time I read it. I am twelve years old and live on a farm. I have two sisters, one is my twin sister. I like school very much. I have a pet cat, his name is Tommy. He is very affectionate except when you lift him. Whenever you lift him he scratches you.—Ruth G. Heffner, Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—I am nine years old and in the fifth grade. I live on a farm which is back from the road. The lane has maple trees on both sides and in the spring we tap the trees and I collect the sap.

I have a pet cat that I named Daisy. I have three sisters. Last summer I collected butterflies. My father made me a case and I mounted over 150 specimens. I took them to the Albany, Schenectady County Fair. They won the blue ribbon.—Esther L. Rowland, Albany County, N. Y.

COMING IN AS A LION
Hilda Hiddleson, Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—I thought I would write a few lines to the Forum page. We live on a farm and I help to weed onions, pick peas and pick berries. We go to the woods and pick blackberries and sell them in town. We also go to pick wild lilies in Mr. Brown's field and take them home and bunch them up and papa takes them to town when he takes his vegetables in.—Albert Finsbaugh, Venango County, Pa.

NUT CAKE

1 cup sugar
½ cup of butter
2 eggs
1½ cup of flour
2 teaspoonfuls baking powder
½ cup of milk
1 large cup of nuts.—Mildred I. Duttinger, Northumberland County, Pa.

Dear Cousin and Forum Friends:—I enjoy reading the Forum letters very much, especially Cousin Ruth's. We have a Collie dog and he is very playful. When we bring him in the house in the mornings he just acts as tho he wants to say good-morning. He also enjoys playing with a ball.

I have a brother eight years old and today one of the neighbors who is going to move away this spring gave him two tame rabbits of which he is very proud.

I am eleven years old and am in the eighth grade in school. I go to Centennial Hall. My teacher this year asked the pupils in my class to write a biography of their lives. And, Cousin Ruth, if you think it will be all right I will send my biography to the Forum page. Best wishes and good luck.—Grace B. Durboran, Adams County, Pa.

Go ahead and send in your biography, Grace. Even if it is too long to print, I'd like to read it.
COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I am a country girl and live on a farm. I am the only child and sometimes it is pretty lonely. I have a pet cat that is almost as large as a dog; his name is Tommy. He is a white cat and is four years old.

I love the little birds. I saw a purple grackle this spring. They are a large bird with a purple head and the neck is all colors. The rest is black and they are very pretty birds. I also saw a bluebird. I have not seen a robin yet.

My grandmother lives with us, she is eighty-one years old. We have a good many fruit trees. I go to school a mile from home and am in the eighth grade. In summer I go to the woods and gather wild flowers. I have a camera and take pictures in the summer. There are a lot of teaberries this year and I have been out and picked some.—Jane Gaston, Jefferson County, Pa.

FEATHER CAKE

1 cup sugar
1½ cup flour
2 teaspoons baking powder in sugar
Break 2 eggs in a cup and put in 4 tablespoons butter.
Fill up cup with sweet milk. Beat all together. Flavor to suit.—Elisabeth Batcher, Warren County, Pa.

Dear Cousin Ruth and Forum Friends:—I will at last join this happy circle of boys and girls. I am twelve years old and in the fifth grade at school. I have been reading the Forum page for almost two years. I often thought of writing but just didn't get at it.

I like farm life very much. I help out in the field in the summer. We have a dog named Shep; he is black, white and brown spotted. When we tell him to cry he will lay down and rub his paws over his eyes and whine as tho crying. He will shake hands when we tell him. He watches the cows and drives them back to the barn yard when we tell him.

There is a sawmill below our house. We watch the mill running and see the logs sawed into lumber.

I haven't seen any letters from Clearfield County for some time. Girls and boys, wake up and write. I am sure Cousin Ruth would like to hear from you. I have a camera and will send some pictures later on.

I attend Sunday school almost every Sunday. I like to go to church. It doesn't seem like Sunday to me if I don't go to church.—Mabel Smeal, Clearfield County, Pa.

Dear Cousin Ruth and Forum Friends:—I live in a big white and green house with a large green lawn in summer. My mother and I plant flower beds which look very nice in summer. We live three miles from a railroad station.

We have tapped about eighty-five trees and are making syrup. We have a sugar house camp. It is a lot of fun to make syrup these nice days.

I have five pet banty hens which are very pretty. There names are Snowflake, Philis, Tommy, Speckle and Jenny.—Dorothy Hoag, Wayne County, Pa.

Dear Cousin Ruth and Forum Friends:—I am nine years old and in the fourth grade at school. How many go in wagons to a country high school? There are fifty pupils in my room at school. I take violin lessons in the summer. We have had lots of snow this winter and I have been learning to ski.

I have one little sister three years old. She has a tiger cat named Tabbyskins. I have a Scotch Collie dog named Laddie; also two ducks and chickens.

I like to go fishing. I get enough fish for dinner. Sometimes I catch twenty-five fish. The creek is near my home. I like to read the Forum letters. I like to play football and see big football games.—Erwin James Adams, Tioga County, Pa.

Dear Cousin Ruth and Forum Friends:—Here I am back on this jolly Forum page and glad to see the Forum friends. How is everybody? I took a trip to Pittsburgh to see my brother and sister. We went with the intention of seeing my brother who has the mumps. My sister and brother-in-law have them now. I saw lots of nice things on my way. It was awful warm the day we went but when we came back it was awful cold and rough.

What did you Forum friends do on February 22? I had a big dinner. It was a birthday dinner. It was my nephew's birthday. He is three years old.—Viola Smith, Huntingdon County, Pa.

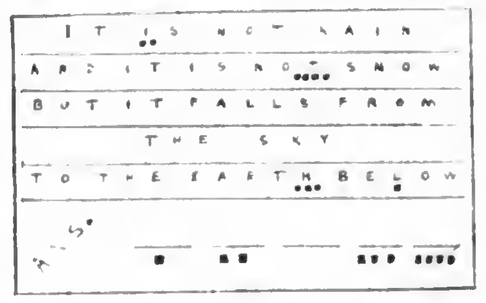
OUR LITTLE FOLKS' PUZZLE CORNER



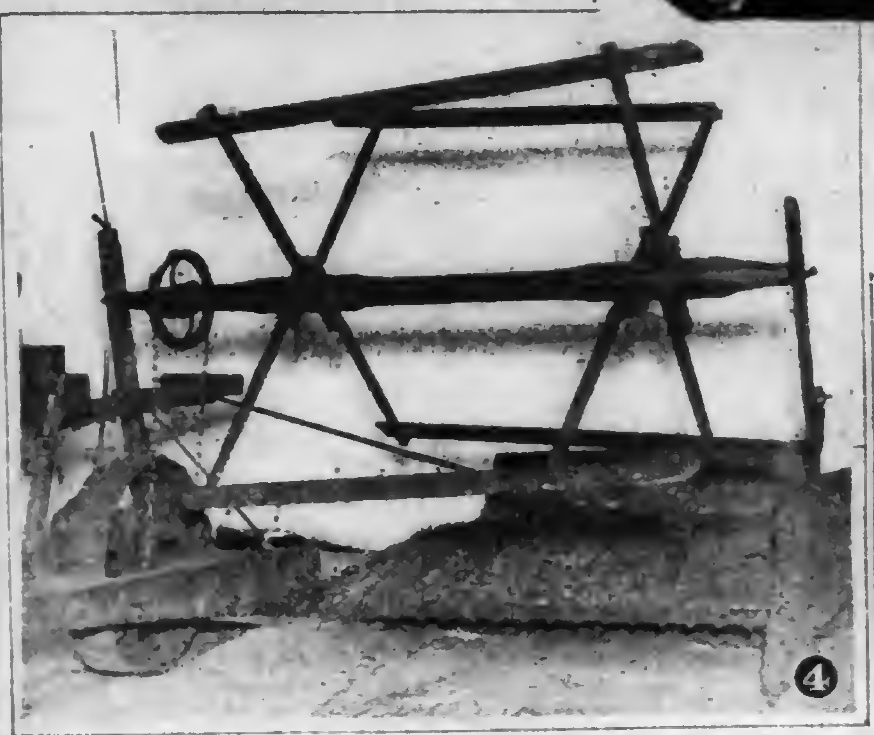
Dear Little Folks:—On a bright spring day it ought not to be difficult for you to solve this puzzle. If you will look carefully at the lines at the bottom of the picture you will see little black marks which match certain little black marks under letters in the little verse. All the letters but one which form the answer are given to you in this way. When you have discovered the telltale marks and have written in the corresponding letters, I am sure you will very soon think what letter should go in the space left vacant, since it will spell a word you all know and give you the name of the important thing which "falls from the sky." When you have found the answer, send it to me on a POSTAL CARD, so that it reaches me by April 11. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answers, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of post cards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

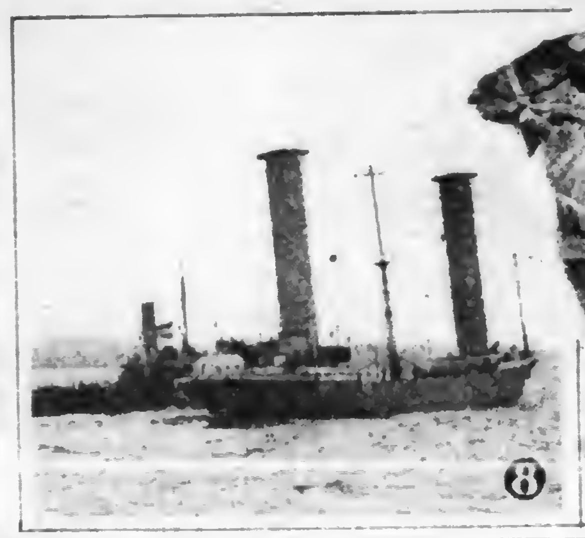
PUZZLE PRIZE WINNERS

The answer to the puzzle published in the March 14 issue of Pennsylvania Farmer is: COLUMBUS, SHAKESPEARE, JEFFERSON, NAPOLEON, EDISON.

The prize winners are: Charles Acker, age 9, Gap, Pa.; Herbert E. Bair, age 12, New Holland, Pa.; Clinton Best, age 12, Knox, Pa.; Sara Jane Hackenberg, age 8, Middleburg, Pa.; Mae C. V. Kistler, age 9, Slatington, Pa.; Elmer D. Leaman, age 12, Lancaster, Pa.; Jane Messmer, age 7, Whitford, Pa.; W. Frank Osborne, age 10, Slippery Rock, Pa.; Helen W. Reeve, age 8, Riverhead, N. Y.; Rosa Winstel, age 9, Salem, N. J.

PASSING EVENTS IN PICTURES





(Copyright by Underwood & Underwood)

1.—A lively day in the dead letter office in Uncle Sam's Post Office Department.
2.—Harlan Fiske Stone in his new robes of office, as Supreme Court Justice.
3.—Madame Gabrilowitch, formerly Clara Clemens, daughter of Mark Twain, has attained fame as a musician.
4.—An old timer—this reaper was built in 1831 and is preserved for exhibition purposes in comparison with modern machines.
5.—The new minister from China and his wife on their recent arrival in this country.
6.—A quintuple microphone of the sort which enabled the whole continent hear President Coolidge take his oath of office.
7.—New York earthquake proved too much for even this seismograph at the Museum of Natural History. Mr. Hill, in the picture is pointing out the needle which trembled off the instrument.
8.—The rotor ship, a freak boat which took eight days to voyage from Dantzig to Kiel. You see it anchored at Leith, Scotland.
9.—Society at play indulges in a novel means of transportation.

From Photography to Cooking

She Tackled Her New Job with the Right Spirit

THE girl photographer sat beside the kitchen window back in the old farm home thinking over what the doctor had said. "Give up dark-room work absolutely; take up an entire change of work—not just mere living, mind you. If you don't, those beastly headaches will continue, and —shortly—you'll have no eyes," the doctor's advice was yet ringing in her ears.

There was little spirit left in the girl. The terrible headaches and paining eyes had pretty well sapped the supply; but the bit left proved to be genuine gold.

Knew One Thing Only

"I really don't know anything but pictures, mother. I can't think of anything that my experience and knowledge would lead to.—unless it would be cooking."

"Cooking, my dear! How do you make that out?" surprised, the mother dropped the stirring spoon back into the soup.

"Well, I've illustrated a lot of cookery for periodicals, with never a 'call.' And I've always had to furnish recipes with the pictures of the prepared dishes, and, maybe I could furnish just as good results if I cooked them now."

The mother smiled. "I think, my dearie, you'd need more tangible evidence—than just the recipe—if you could succeed in cooking."

At the Employment Bureau

The would-be cook sighed, but not hopelessly. A few days later, she faced a whole battery of questions from a city employment bureau. Her heart quickened at the very first consideration.

"We could place you immediately in a very conservative place with a fine position and chance of immediate promotion, if you could cook—can you?"

"Yes, photographically," came the sincere answer, with not the slightest intention of "putting it over on them."

"Photographically? What do you mean?"

Then she explained fully.

"Just a moment—let me see," and the telephone buzzed insistently "Yes, send her up. Immediately," came the reply in the briefest moment.

The First Interview

And she went,—down into the middle dining room of a great city hospital, to the dietitian in her white uniform who was busily clicking off the day's menu on a typewriter.

Again the girl explained. The dietitian's eyes gleamed with satisfaction. "You don't know how glad I am to hear you say you will cook by recipe. That means you are willing to follow someone else's judgment than your own. The position is yours, and—well, I shall not care what you cook. You may plan as you please after today—I feel I can trust you," placing the menu in the girl's eager hands.

The photographer-cook went on duty at 9:30, as night cook for the night nurses and doctors, that same evening.

The next day, a sleek-bobbed waitress startled her by asking: "How did you make that French dressing?"

Made Good Salad Dressing

"By the recipe," she laughed. "Why?" a great fear, for a moment, making her knees shake.

"Oh, just that the supervisor asked who made it. She said it was the best she had ever eaten here."

"Did they tell her?"

"Yes, the dietitian told her the new night cook prepared it and that you are to stay—and be promoted real soon."

"Tangible evidence! And I never even tasted it," the photographer-cook breathed, reminiscently, as the waitress's rubber heels padded back to the dining room.—Rose Aline Kramer.

Electric Percolator

PRACTICAL and ornamental. Begins percolation instantly. Makes better coffee. Nothing mechanical to get out of order. Can be used day in and day out with little or no attention. Economical to operate.

1925 Canning Season

IT IS not too early to plan for the canning season, as it should have some consideration even in ordering the seed for the home garden. A surplus should be ordered of the fruits or vegetables to be canned.

The ideal condition for home canning is to be able to take the fruit or vegetable directly from the garden and can it immediately. "Two hours from field to can" is the successful canners' favorite slogan for fruits and vegetables. Meats present a slightly different problem. They are not ready for canning until the animal heat has entirely disappeared, and it is a good plan to let them hang for twenty-four hours after killing.

Better Canning, Better Health

Consistent, careful canning will make us healthier and better nourished; will provide a pleasing variety of foods thruout the year; and will save food which would otherwise go to waste.

At all times the body needs certain foods for upbuilding its structure and maintaining health. Mineral matter, organic acids, and vitamins are important in this respect, and canned fruits and vegetables help to supply us with these essentials in the diet. Canned products are also a valuable resource in time of emergency. A well-stocked canning cupboard can very nearly see a meal thru from soup to dessert.

As a rule canning is more successful if the housewife understands why canned foods sometimes do not keep. Spoilage is due to the action of certain organisms upon the food. These organisms may be roughly divided into three classes: yeasts, molds, and bacteria. The first two are easily destroyed by the application of heat, but bacteria often take on a tough outer coating or shell and become dormant, and in this state are difficult to kill.

Why Foods Spoil

Canning is the art of killing or sterilizing these organisms, and of sealing the food in such a manner as to prevent the entrance into it of other organisms from the surrounding air.

If careful attention be given to detail, there is no necessity of ever losing any canned product. A five-year survey by the United States Department of Agriculture indicates that seventy-five per cent of the spoilage was due to the use of poor rubber rings, defective tops on screw top jars, or improper sealing from defective joints, springs and caps.

Another fruitful source of spoilage is that some persons undertake to can stale or wilted vegetables. Careless handling is also sure to cause loss. Absolute cleanliness in every detail is essential.

The steps in successful canning will be taken up in a future article. —Grace E. Fitts.

"Baby Talk"

A LITTLE boy of kindergarten age was brought to a state specialist to be examined for speech defects. The specialist dismissed him saying that he had an aggravated case of "baby talk" which he would overcome.

Some laughed at the child, and much time was spent in trying to figure out what he was trying to say,—much to his annoyance. Others would tease him, just to hear him talk. He developed a peevish cross disposition as a result.

What a shame it is that any child should have to learn to talk twice, or to have to be so often corrected as he grows older. Surely children are worth the consideration of being taught correctly the first time.

In talking to our children, let us enunciate clearly, and let us insist that the whole family do the same. —Mrs. G. W. M.

COOKING CEREALS

SINCE cereals require long slow cooking, it is poor economy to prepare them in small quantities; cooked cereals have many possibilities. What is left over from breakfast is equally good for lunch or dinner. Such cereals as rice, hominy and cornmeal, in combination with cheese, eggs or milk, may well be served as the main dish at lunch. Tomatoes or green peppers may be added to give variety. Fruit or gelatin combinations with rice or any well cooked cereal will result in a number of acceptable desserts.

About Those Extra Two Hours

One Reader's Idea of How She Would Use Them

THIS thought is certainly a new one! Am I radically different from other women, I wonder, in deciding at once that I would use those two hours, if I had them, catching up some of my work that is behind?

As soon as my mending, sewing, cleaning, etc., reached a point where I could leave them without feeling too uneasy, I would begin utilizing those extra hours in paying calls till I should be able to look all my neighbors in the face. The school would be remembered while I was calling, as would also several other places not purely social.

Relaxation is Greatest Need

Probably no two women would use the extra time in quite the same way, but would we not all use it to supply the deficiency that annoys us most?

Often, no doubt, we should receive the maximum benefit from our extra time if we were to spend it in complete rest and relaxation. A nap might be ideal for some people, tho it would never do for me during the day. However, I should just enjoy not doing a thing sometimes until I felt a bit rested.

A Few Centures of Rest

Speaking of the resurrection the other day, our Sunday school teacher said he didn't think it mattered much whether or not the soul went directly to heaven; most of us need a few centuries of rest anyway.

Would any of us be likely to add entirely new or different interests to our routine because we had acquired a twenty-six-hour day? The addition might permit social or religious work that we had never before had time to do, or it might make it possible for the talented women whose music or painting of fancy work has been crowded out by dish-washing and baby-tending, to resume these for pleasure or profit.

Personally I used to love to read but I never have time any more. Maybe half an hour a day with a good book would not be time misspent if my work need not be unduly neglected.

After devoting a half hour of my extra two hours, to reading, I should still have an hour and a half extra every day, and I believe my neglected correspondence would once more receive attention. Two hours a day would mean twelve working hours a week, and in that time one could accomplish much.

More Time on Sunday, Too

Then if I had two hours more on Sunday, I shouldn't be so likely to hurry till my head was dizzy, trying to get ready for church and Sunday school.

With more time at my disposal, my house could be cleaner and more orderly, my health would improve because I shouldn't be so nervous, my sewing and mending might get done so that we should all look better groomed, and perhaps we should accomplish enough so that after a year or so we could dispense with the twenty-six-hour day.

I am afraid, however, that without it we should soon be back in the same old mess.—Mrs. E. M. A.

When Plants Refuse to Bloom

Tendency to Run to Leaf Caused by Over-feeding

Can someone tell me what to do with a clematis that has not bloomed for two years? It may never have bloomed, as we bought the farm only two years ago, and at that time it was sprawling all over the ground. We trained it up against the house on strings. It grew vigorously, but never a bud or bloom. Last year we gave it a good trellis and fertilized it with chicken manure, but no better success. Shall we cut the old vine all off and let it start again? It is apparently, judging by the foliage, one of the sweet-scented white ones that bloom so profusely in the late summer and early fall. It must bloom or go.—R. L. B., New Jersey.

The only function of the flower, as far as the plant is concerned, is to produce seed so that the plant on which it grows shall be reproduced. If conditions are over-favorable for the continued growth of the plant, it sometimes seems to throw all its strength into the manufacture of food and the building of more stem growth.

The leaves are factories where (by the aid of sunlight in lieu of a cook-stove) the plant transforms the water and mineral matter supplied to it by the roots, and the carbon dioxide gas breathed out by man and other animals, into the starch and proteins that feed the plant.

A Case of Over-feeding

If the plant receives too much food in the form of soluble nitrates, its tendency is to "run to leaf." Chicken manure is very high in its ammonia (nitrogen) content, and the abundant supply which you give it probably caused the plant to build more factories (produce more leaves) so as to use up all this plant food in making stem groth.

"What need," says the plant, "to produce seed if I myself am sure to survive?" To stimulate it to produce flowers, give it a good scare. Cut it back,—not to the ground, but one-half to two-thirds, not more. Do not apply any nitrogenous fertilizer. There is probably enough left in the ground from last year, to last a year or two. Instead apply bone meal,—two pounds—and an equal amount of wood ashes.

Give It a Good Scare

The bone meal is slow in action and the amount stated will supply all the lime and phosphoric acid the plant will need for some years. The ashes supply potash. These chemicals seem to be essential to the production of seed, and unless all the elements necessary for seed production are provided, the plant will not produce blossoms,—the prelude to seed.

Another hint,—the feeding roots of the plant are the very tiny root-hairs which are thrown off by the roots at a considerable distance from the stem. So work your fertilizers into the ground at the surface of the soil, two or even three feet from the stem.

Don't cut the vine down this year even if it fails to respond to this treatment. It may have had such an overdose of leaf-stimulant that it will take two seasons to recover.—O. P. P.

MOTHER'S RHUBARB PIE

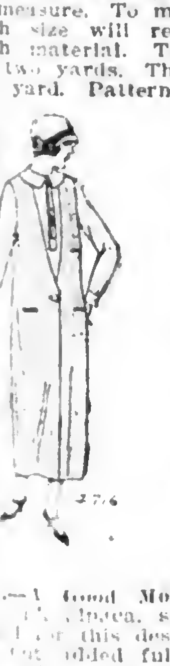
A favorite dish when May birds fly
Is simple good old rhubarb pie.
To hinder heaviness, you spread
Egg-white upon the crusty bed;
Then layers of rhubarb sliced from stem
With buttered sugar flecking them.
On top one cup of sugar shower,
A little nutmeg, salt and flour.
No juice in oven, if you thrust
In slit of wet-edged upper crust,
Pressed down, a paper funnel. Pray
Bake quickly! Then this tidbit gay
Of crystal cubes, in flakes encased,
Will please the most fastidious taste.

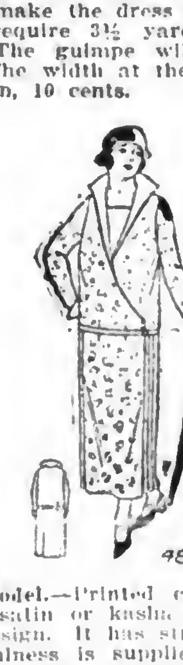
R. M. C.

For April's Sun and Showers

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and ages for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

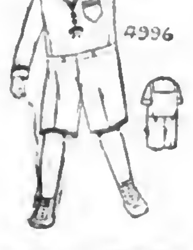
4716.—A Popular Style.—Beltless straight line dresses are much in vogue. The style here portrayed may be worn with any blouse or shirt waist. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. To make the dress for a 38-inch size will require 3½ yards of 40-inch material. The guimpe will require two yards. The width at the foot is 1½ yard. Pattern, 10 cents.

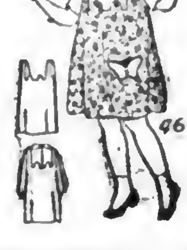




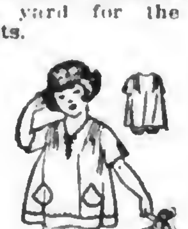
4867.—A Good Model.—Printed cotton, crepe, alpaca, satin or kasha could be used for this design. It has straight lines, but added fulness is supplied by plait sections at each side on the fronts. Seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires [illegible] yards of 40-inch material. For collar, vestee and cuffs of contrasting material five-eighths yard is required. The width at the foot with plaits extended is 2⅛ yards. Pattern, 10 cents.

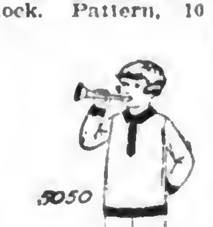
4996.—A Boy's Suit.—Flannel, tweed, serge or jersey cloth may be used for this model. It is also good for wash materials; for velvet or corduroy. Four sizes: 6, 8 and 10 years. A six-year size requires 3¼ yards of 27-inch material. Pattern, 10 cents.





4669.—A Simple Frock.—Printed crepe was used for the "smock" and batiste for the guimpe. One could have jersey or plaid suiting in combination with wool crepe or silk. Four sizes: 4, 6, 8 and 10 years. A six-year size requires 1¼ yard of 27-inch material for the guimpe and 1⅞ yard for the smock. Pattern, 10 cents.

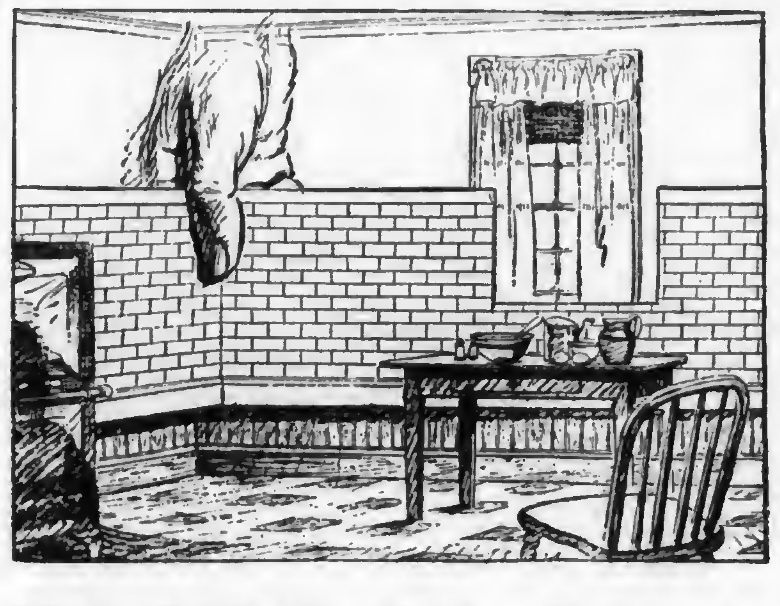




4285.—Play Garment.—Linen, chambray, flannel could be used for this model. A simple finish of stitching or stitchery, or a binding in contrasting color, would be very pleasing. Three sizes: 2, 4 and 6 years. A four-year size requires 2⅝ yards of 36-inch material. Pattern, 10 cents.

5050.—For Little Brother.—Linen, chambray, poplin, jersey cloth and flannel may be used for this style. Three sizes: 2, 4 and 6 years. If made as illustrated a four-year size requires three yards of 36-inch material, with one-half yard of contrasting material for collar, cuffs lap and facings. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date Spring and summer 1925 Book of Fashions.



for WALLS

Tile Walls Like Magic

Beaver Tile Board works wonders in old kitchens and bathrooms. It gives you glistening white tile walls at one-tenth the cost of the old way because this miracle tile comes in big panels—ready to nail right over the dingy old cracked walls. Get a few panels of it from your local dealer, nail it up, enamel it, and behold the lustrous new beauty of your kitchen and bathroom. Or mail the coupon for a free sample and a full explanation of its use and application. Why put up with a dingy kitchen or bathroom any longer?

Beaver Tile Board

Beaver Tile Board comes in panels 4 feet wide and 6 to 10 feet long —each contains hundreds of uniform tiles—the indentations are deep and clean-cut. When nailed over old walls or direct to the studding it will not crack, fall or crumble. Wears like porcelain. Ask your dealer about it and mail coupon for free samples.

Quilt Patterns from the West

Fruit of Happy Hours Spent in Quest of Designs

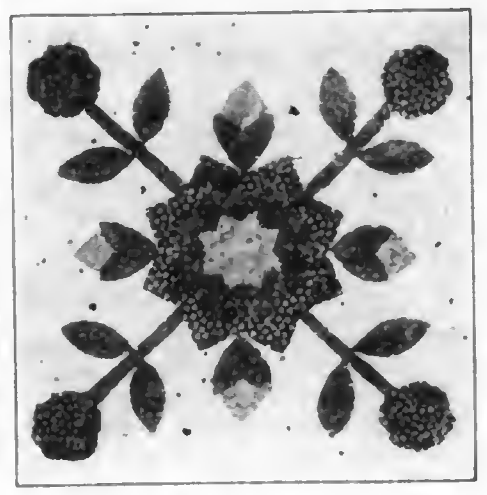
ONE of my quilt jaunts, last fall, took me into a quaint cottage home in Indiana—a cottage half hidden by trees and vines. With its old fashioned garden seen thru the picket fence, it looked the true home of the patchwork quilt and the quilt lover.

It was late afternoon when I arrived, and when I gave my name, my hostess smiled and said, "You want to see my quilts. Come in and have supper, then we will look at them." I realized that I had met a charming hostess—a little woman with all her treasures of so many years in her home, her old fashioned flower garden and a smile for everyone.

Twenty-one Quilts in All

After supper we "looked at quilts." She brought them from their resting places, one or two at a time, until we had twenty-one. Some were made years ago by her mother and sister, some she had made, but the work on all was exquisite. Such beautiful quilting and such tiny pieces, so perfectly fitted together.

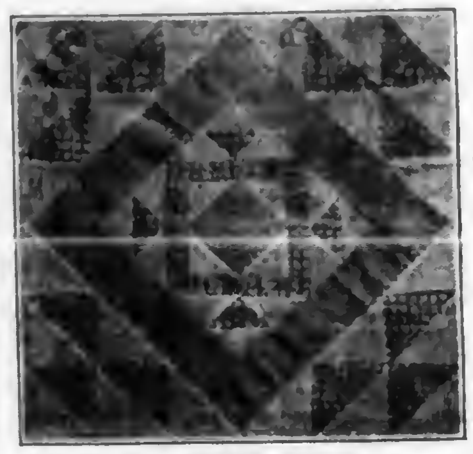
She told me stories of one and another, how many she had pieced of each pattern—to whom she had given them and how patterns had gone from neighbor to neighbor. I couldn't help wondering how many of those who had been remembered with one of her quilts really appreciated the endless number of stitches connected with the finished cover.



Iowa Beauty

After our very pleasant quilt evening I slept on a feather bed with three patchwork quilts for cover. This may not have been conducive to slumber, but something was. Anyway I did not mind the fact that the small town where the train stopped did not boast of a hotel. Next morning when I waited for the train to carry me back to Chicago I felt much richer in quilt lore and happy thoughts.

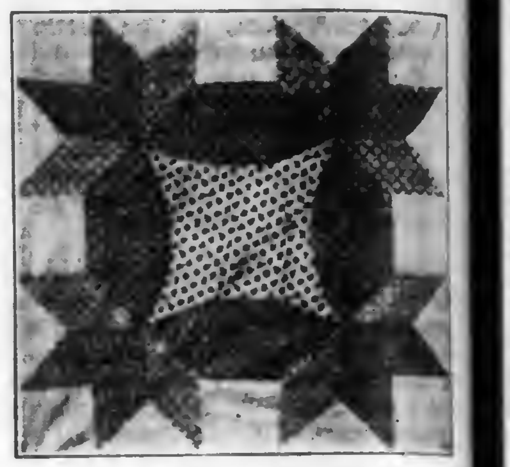
During the winter my hostess still pieces and quilts. Says she loves to do so and her work shows it. I can imagine her cutting and sewing—each little piece doing its bit in forming the design. She probably does not know when the thermometer registers below zero for the cottage has six rooms and six wood stoves—five heaters and a cook stove. Rather a comfortable place, I think.



Cleveland's Choice

Indiana is not the only state where these quilts are to be found. Every state has its share, as I have found in my rambles, and it is next to impossible to say where the patterns originated unless we find a rare pattern in the home of the woman who designed it.

The Iowa Beauty is a very pretty pattern and well worth the labor. It is an applique pattern made in red, green and yellow. Hands All Around and Cleveland's Choice can be set together with strips of white or color, four inches wide or with alternating squares of white.—C. S.



All Hands 'Round

Patterns may be secured thru the Household Editor. Price, twenty cents each. Allow ten days for filling orders.

Cheerful Tinted Walls

WALLS and windows, the two w's of housecleaning, are as vital as the three r's in the life of a schoolboy.

Walls should radiate warmth, cheer, and beauty. They should invite us by their glow of light everywhere, but especially in a bedroom they should impart a feeling of rest and peace. To my mind, these happy qualities are best obtained by the use of a good wall tint.

Paper, improperly hung, is untidy and unsightly. Paper that sticks is so hard to remove that we either postpone from year to year the messy fatiguing process, or else just paper another layer on top of the dirty one, —both very bad practices for health.

We Don't Give Walls a Square Deal

We carefully wash and scald our dishes thrice daily. We wash and boil our soiled linen at least once a week. Our windows are shined at frequent intervals. But I have known walls to go two, five, ten, yes, even twenty years with the same dirty faded covering.

This is for two reasons. Our methods have been either too difficult or too expensive, or both. Tinting is so easily done, so quickly done, and the cost is so trifling that every country woman should acquaint herself with the method..

The best of wall papers will fade if we let the blessed sunshine in as we should, while tints of high quality are not affected by sunlight After twenty years of housecleaning in the mountains of the Northwest, the valleys of the central states, and now on the sands of New Jersey, I recommend tints for sanitary and beautiful walls.—G S. S.

BAKED SQUASH

BOIL squash and mash as usual. Put into baking dish, dot with butter, and place halved marshmallows over the top. Set into hot oven for a few moments and serve immediately. The marshmallows add quite a festive touch if browned just right. —May H. Mumaw.

The Health Circus a Good Show

Everyone Enjoys a Little Play Like This

ONE of the most interesting pieces of work done by the Dairy Council is the Health Circus given in schools by the dramatic department. This little play, just long enough to rouse and hold the ever-roving attention of the child, is built around the important fact that happiness goes hand-in-hand with health and that to have and keep health one must eat those foods which promote it—fruit, vegetables and milk. With subtle cunning, the dramatic department has succeeded in putting on a play which is amusing not only to those who look on but in which the boys of the school really enjoy taking part.

The clown—the one main character in The Health Circus—is always played by one of the Dairy Council's dramatic workers. With her natural interest in the work she enthuses the children and the result is a play which is astonishingly successful even when it must be given without scenery.

Usually appropriately designed folding screens are used as scenery, to make the illusion more perfect, but sometimes the play is being given in more than one school at the same hour and one of them must put it on without scenery. The costumes are very beautiful and are kept clean and in order, as health costumes should be, by a costume woman, whose only work is to look after them.

In the dramatic department, the head and her assistants work together to evolve a suitable story. Then appropriate music is written, dances are worked out and finally the play is ready. Then, after one of the story tellers has visited the school several times, telling tales which impress health and foods upon the child mind, the play is given—it may be the Health Circus or some other specially written play. The Health Circus is the story of a little boy who can't go to the circus because he is ill. The baseball nine come by to show their health by the snappy game they play, in which the sick boy can take no part.

A Group of Merry Players

Then the circus clown is introduced and becomes interested in the sick boy, teaching him thru the exhibitions of strength and agility of the boys he gathers together to give a circus, that one must eat proper food, drink milk and enjoy lots of fresh air to do the things the lion tamer, the acrobat and the clown in the circus can do.

It is altogether a good play and I won't spoil it for you by going further into detail, but if it or any of the others come to your school, leave the dishes and go see it!—E. M. P.

Advantages of a Village Farm

MORE and more the isolated farms are being deserted or are passing into the hands of foreigners during the present period of agricultural adversity, and those who previously tilled the soil and raised the crops are congregating in cities and towns, or operating "village farms."

The latter plan appeals to me as the most satisfactory solution of the farm problem, since it eliminates the inevitable homesickness that would come to most farmers transplanted to a large city. At the same time it affords practically all the advantages of town life.

In Order to Be Near School

Yes, I hear some one say that such a location is possibly only for a limited number. But it is entirely possible for a great many more than now avail themselves of the opportunity, so it certainly cannot yet be considered unattainable.

We wanted better educational opportunity for little daughter, but we never could stand the close quarters afforded by a small village lot; we had to have elbow room. So we located on twenty-nine acres with fairly substantial but rather neglected buildings, some meadow, plenty of pasture, and a few acres of timber land.

We are about three minutes' walk from the center of a thriving little village, and so near a good high school that the little girl always comes home for lunch at noon, except on the worst days in winter.

A Short Walk on a Good Road

The change was made entirely because of the school, and because we all wanted to be together, but every day we realize more fully the advantage of it. We have neighbors within a stone's throw. When we want to attend church or social functions we have only to change our clothes and walk to any of them in five or ten minutes on a good road.

We can farm here as well as anywhere, and surely the market for surplus products is better here than in the country. We have a good pavement into a city of more than 40,000 and there are dealers here who buy produce at the door to be trucked to that market—probably twelve miles.

Why Don't More Folks Try It?

There are many more such locations (we didn't buy them all) and I believe many a farmer would succeed in such a place, who never will on his isolated or hilly farm.

Some people think there isn't much work in town, but we never were busier in our lives, and here we can work as we couldn't in deep snows or blizzards. Our back yard is getting pretty full of wood, but on the other farm we never could accumulate a surplus. —Mrs. E. M. A.

Will your boy be just one of many?

THEY both came to college from the same town—both were good, clean-cut fellows. But Jim was exceedingly popular, whereas Frank was just one of many. There was no marked difference in personality—but Jim could play the piano. It was Jim who was the life of the crowd—it was he who was remembered for his leadership and his inspiring influence, long after he had left college.

Every child should have an opportunity to learn to play the piano. It is an accomplishment that will be of real value in after life. Neither is it too late for you to learn—just because you are grown up. Choose a piano that will be a constant source of pleasure to you—a Weaver—and find a good teacher.

The more you investigate the Weaver Piano, the more you will come to realize why leading pianists acclaim it as one of the greatest musical instruments of the times.

At the first touch you immediately will be struck with the musical richness and deep sonority of the Weaver's tone. This beautiful tone is one of the noted characteristics of the Weaver. It remains rich and full throughout the years. Even though you may know little of pianos, you will be impressed by the delicate sensitiveness of the keyboard. The wonderful action is instantly responsive to the lightest touch—and yet has exceptional strength and endurance.

The Weaver Piano is truly "a thing of beauty and a joy forever." Write for the name of the dealer in your vicinity. Ask for the interesting Weaver catalog. Convenient terms easily arranged—and a liberal allowance made on your present piano.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

LITTLE John led me into the group and the schoolmaster began:—Let us call this bit of a story: The Guide to Paradise.

"One day in early June I was lyin' under the big apple tree in the garden—sure I was. It was all white and sweet with the blossoms like a bride in her veil—an' I heard the hum o' the bee's wing an' odors o' the upper world come down to me. I was lookin' at the little bird house that we had hung in the tree-top. Of a sudden I saw a tiny bit o' a 'warf—no longer than the thumb o' Mary—God love her!—on its wee porch an' lookin' down at me.

"'Good luck to ye!' says I. 'Who are you?'

"'Who do ye think I am?' says he.

"'Nobody,' says I.

"'That's just who I am,' says he. 'I'm Nobody from Nowhere — God save you from the like.'

"'Glad to see ye,' says I.

"'Glad to be seen,' says he. 'There's a mighty few people can see me.'

"'Looks to me as if ye were tellin' the truth,' says I.

"'Nobody is the only one that always tells the truth—God help ye,' says he. 'And here's a big chunk o' it. Not one in a thousand ever gets the feet o' his mind in the land o' Nowhere—better luck to them!'

"'Where is it?' says I.

"'Up above the earth where the great God keeps His fiddle,' says he.

"'What fiddle?' says I.

"'The fiddle o' silence,' says he. 'Sure, I'm playin' it now. It has long strings o' gold that reach 'way out across the land o' Nowhere—ye call 'em stars. The winds and the birds play on it. Sure, the birds are my hens.'

"He clapped his little hands and down came a robin and sat beside him. Nobody rumpled up the feathers on her back and she queed like she was goin' to peck me—the hussy!

"'She's my watch hen,' says Nobody. 'Guards the house and lays eggs for me—the darlin'! Sure, I've a wonderful farm up here in the air—millions o' acres, and the flowers and the tops o' the trees and the gold mines o' the sky are in it. The flowers are my cattle and the bees are my hired men. Do ye see 'em milking' this big herd o' apple-blossoms? My hired men carry their milk away to the hollow trees and churn it into honey. There's towers and towers of it in the land o' Nowhere. If it wasn't for Nowhere your country would be as dark as a pocket and as dry as dust—sure it would. Somewhere must be next to Nowhere—or it wouldn't be anywhere. I'm thinkin'. All the light and rain and beauty o' the world come out o' Nowhere—don't they? We have the widest ocean up here with wonderful ships. I call it God's ferry. Ye see Nowhere is not to be looked down upon just because ye don't find it in Mary's geography. There's lots o' things ye don't know, man. I'm one o' them. What do ye think o' me?'

"'Sure, I like ye,' says I.

"'Lucky man!' says he. 'Everybody must learn to like me an' play with me as the children do. I can get along with the little folks, but it's hard to teach men how to play with me—God pity them! They forget how to believe. I am the guide to paradise and unless ye become as a little child I can not lead ye.'

"He ran to the edge o' the tree roof and took hold o' the end of a long spider's rope hangin' down in the air. In a jiffy he swung clear o' the tree and climbed, hand over hand until he had gone awa-a-a-a-y out o' sight in the sky."

"Couldn't anybody do that?" said little John.

"I didn't say they could—did I? ye unbeliever!" said the schoolmaster as he rose and led us in to the supper table. "I said Nobody did it."

WE GOT him to tell this tale over and over again in the days that followed, and many times since that impersonal and mysterious guide of the schoolmaster's fancy has led me to paradise.

After supper he got out his boxing gloves and gave me a lesson in the art of self-defense, in which, I was soon to learn, he was highly accomplished, for we had a few rounds together every day after that. He keenly enjoyed this form of exercise and I soon began to. My capacity for taking punishment without flinching grew apace and before long I got the knack of countering and that pleased him more even than my work in school, I have sometimes thought.

"God bless ye, boy!" he exclaimed one day after I had landed heavily on his cheek, "ye've a nice way o' sneakin' in with yer right. I've a notion ye may find it useful some day."

I wondered a little why he should say that, and while I was wondering he felled me with a stinging blow on my nose.

"Ah, my lad—there's the best thing I have seen ye do—get up an' come back with no mad in ye," he said as he gave me his hand.

One day the schoolmaster called the older boys to the front seats in his room and I among them.

"Now, boys, I'm going to ask ye what ye want to do in the world," he said. "Don't be afraid to tell me what ye may never have told before and I'll do what I can to help ye."

He asked each one to make a confession and a most remarkable exhibit of young ambition was the result. I remember that most of us wanted to be statesmen—a fact due probably to the shining example of Silas Wright. Then he said that on a certain evening he would try "to show us the way over the mountains."

For some months I had been studying a book just published, entitled, "Stenographic Sound-Hand" and had learned its alphabet and practiced the use of it. That evening I took down the remarks of Mr. Hacket in sound-hand.

THE academy chapel was crowded with the older boys and girls and the townfolk. The master never clipped his words in school as he was wont to do when talking familiarly with the children.

"Since the leaves fell our little village has occupied the center of the stage before an audience of millions in the great theater of congress. Our leading citizen—the chief actor—has been crowned with immortal fame. We who watched the play were thrilled by the query: Will Uncle Sam yield to temptation or cling to honor? He has chosen the latter course and we may still hear the applause in distant galleries beyond the sea. He has decided that the public revenues must be paid in honest money.

"My friend and classmate, George Bancroft, the historian, has written this letter to me out of a full heart:

"'Your fellow townsman, Silas Wright, is now the largest figure in Washington. We were all worried by the resolution of Henry Clay until it began to crumble under the irresistable attack of Mr. Wright. On the 16th he submitted a report upon it which for lucid and accurate statements presented in the most unpretending manner, won universal admiration and will be remembered alike for its intrinsic excellence and for having achieved one of the most memorable victories ever gained in the United States Senate. After a long debate Clay himself, compelled by the irresistible force of argument in the report of Mr. Wright, was obliged to retire from his position, his resolution having been rejected by a vote of 44 to 1.'"

With what pride and joy I heard of this great thing that my friend had accomplished! The schoolmaster went on:

"It is a very good and proper thing, my boys, that you should be inspired by the example of the great man, whose home is here among us and whose beloved face is as familiar as my own, to try your talents in the service of the state. There are certain things that I would have you remember.

"First—Know your subject—inside and outside and round about and from beginning to end.

"Second—Know the opinions of wise men and your own regarding it.

"Third—Be modest in the use your own opinion and above all honest.

"Fourth—Remember that it your subject and not yourself that of prime importance. You will tempted to think that you are great part of the business. My yo friends, it will not be true. It not be true. It is not you but thing you stand for that is imp tant.

"Fifth—The good of all the p ple must be the thing you stand —the United States of America.

"Now I wish you to observe our great fellow townsman keeps subject to the fore and himself the background.

"It was in 1834 that he addr the Senate regarding the deposits public money. He rose to voice wishes of the people of this state. he had seemed to be expressing own opinions he would have mi his great point. Now mark how cast himself aside when he began:

"'I must not be understood as, one moment, entertaining the impression that opinions and vi pronounced by me, here or elsewh will acquire any importance beca they are my opinions and views. know well, sir, that my name ca not with it authority anywhere, I know, also, that so far as I entertain and shall express opini which are, or which shall be fo in accord with the enlightened p lic opinion of this country, so they will be sustained and no ther.'

"Then by overwhelming proof set forth the opinion of our pe on the subject in hand. Studi the Senator has hidden himself in task and avoided in every possi way attracting attention from purposes to his personality.

"Invitations to accept public d ners as a compliment to himself h received from him this kind of re

"'A proper attention to the ties, on the discharge of which you kindly desire to compliment me quires that I should decline your vitation.'"

All this was new to me, al much more was said touching love for simple folk regarding wh I needed no instruction. Altogeth it helped me to feel the deep foun tions on which my friend, the ator, had been building in his p lic life.

GOING out with the crowd th evening, I met Sally and Mr. Mrs. Dunkelberg. The latter did speak to me and when I asked if I could walk home with her answered curtly, "No, thank you

In following the schoolmaste have got a bit ahead of my hist Soon after the opening of the year—ten days or so later it have been—I had begun to feel self encompassed by a new and su force. It was a thing as intangible heat but as real as fire and more rible, it seemed to me. I felt it in the attitude of my play fell They denied me the confidence intimacy which I had enjoyed

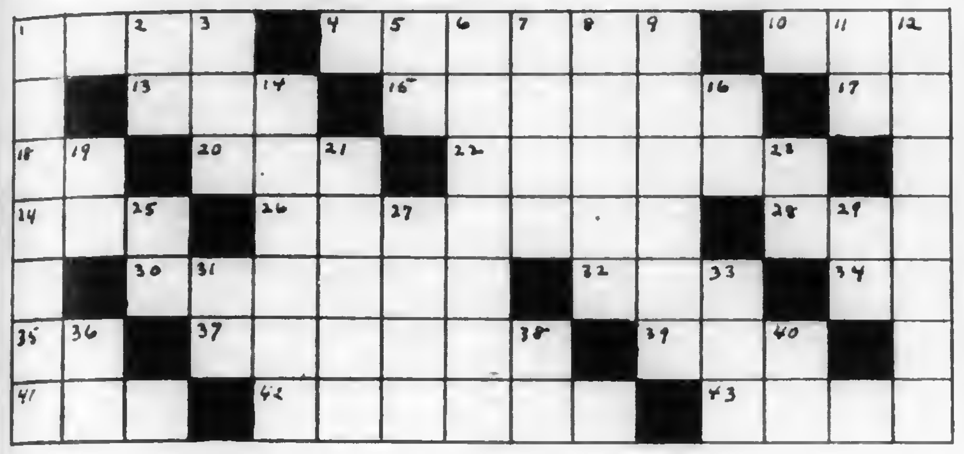
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 37 (across) is RECESS and 7 (down) is POUT. You may begin anywhere in the puzzle. Follow the definitions carefully, and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. Transferred to another for payment
4. Evening meal
10. An atlas
13. A vessel used in washing
15. Earlier
17. None
18. Rose comb, abbreviation
20. Western state, abbreviation
22. Abrupt
24. A clinging evergreen plant, sometimes poisonous
26. Browned by fire
28. To make a memorandum
30. To withdraw
32. A winter month, abbreviation
34. Rural route, abbreviation
35. Prefix meaning "out of"
37. An intermission
39. The fruit containing a kernel enclosed in a hard shell.
41. One of the borders of the mouth
42. The mental faculty
43. The trunk or main portion of an animal or tree

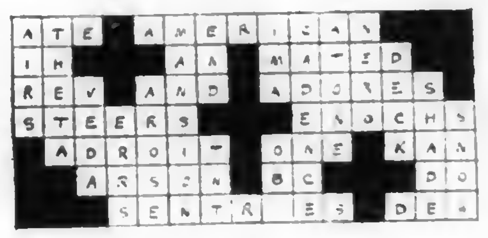
READING DOWN

1. To be drawn into wrinkles
2. Lieutenant, abbreviation
3. Of a dull brown color
5. Personal pronoun
6. To own

To look sulky

8. Completed
9. To make red
11. Article (part of speech)
12. To paint a likeness
14. Superior in point of good qualities
16. Prefix denoting repetition
19. Roman for 105
21. What we use in speaking
23. An eastern state, abbreviation
25. A measure of time, abbreviation
27. The extent of a piece of ground
29. Used with "either"
31. Suffix denoting comparative degree
33. A young fox or bear
36. Roman for 11
38. In this way
40. Preposition

LAST WEEK'S PUZZLE ANSWER



fore. They whispered together in my presence. In all this I had not failed to observe that Henry Wills had taken a leading part. The invisible, inaudible, mysterious thing wrought a great change in me. It followed me thru the day and lay down with me at night. I wondered what I had done. I carefully surveyed my clothes. They looked all right to me. My character was certainly no worse than it had been. How it preyed upon my peace and rest and happiness—that mysterious hidden thing!

One day Uncle Peabody came down to see me and I walked thru the village with him. We met Mr. Dunkelberg, who merely nodded and hurried along. Mr. Bridges, the merchant, did not greet him warmly and chat with him as he had been wont to do. I saw that The Thing—as I had come to think of it—was following him also. How it darkened his face! Even now I can feel the aching of the deep, bloodless wounds of that day. I could bear it better alone. We were trying to hide our pain from each other when we said good-by. How quickly my uncle turned away and walked toward the sheds! He came rarely to the village of Canton after that.

I was going home at noon one day and while passing a crowd of boys I was shoved rudely into the fence. Turning, I saw Henry Wills and my fist flashed to his face. He fell backward and rising called me a thief and the son of a thief. He had not finished the words when I was upon him. The others formed a ring around us and we began a savage battle. One of Wills' friends tried to trip me. In the midst of it I saw the schoolmaster just outside the ring. He seized a boy by the collar.

"There'll be no more interference," said he. "It's goin' to be a fair fight."

I had felt another unfriendly foot but had not seen its owner. We fought up and down, with lips and noses bleeding. At last the time had come when I was quicker and stronger than he. Soon Henry Wills lay on the ground before me with no disposition to go on with the fight. I helped him up and he turned away from me. Some of the boys began to jeer him.

"He's a gentleman compared with the rest o' you," I said. "He had courage enough to say what he thought. There's not another one o' you would dare do it—not a one o' you."

Then said the schoolmaster:

"If there's any more o' you boys that has any such opinion o' Bart Baynes let him be man enough to step up an' say it now. If he don't he ought to be man enough to change his mind on the spot."

A number of the boys and certain of the townsfolk who had gathered about us clapped their hands. For a long time thereafter I wondered why Henry had called me a thief. I concluded that it was because "thief" was the meanest word he could think of in his anger. However that might be, The Thing forsook me. I felt no more its cold, mysterious shadow between me and my school fellows. It had stepped out of my path into that of Henry Wills. His popularity waned and a lucky circumstance it was for him. From that day he began to take to his books and to improve his standing in the school.

I observed that he did not go about with Sally as he had done. I had had no word with her since the night of Mr. Hacket's lecture save the briefest greeting as we passed each other in the street. Those fine winter days I used to see her riding a chestnut pony.

(Continued next week)

Goodyear HEAVY DUTY Cord Tires, for passenger cars, buses and trucks, are available from Goodyear Dealers in the following sizes:

30 x 3½ (Cl.)   34 x 4½ (S. S.)
32 x 4 (S. S.)   30 x 5 "
33 x 4 "   33 x 5 "
32 x 4½ "   34 x 5 "
35 x 5 (S. S.)

For those who desire balloon tires Goodyear makes a complete line, including the HEAVY DUTY type in certain sizes

HARD on tires? Then *you* need the new Goodyear HEAVY DUTY Cord Tire. Built especially for rough roads, heavy loads, fast travel. Stouter, tougher, more massive—the extra-heavy carcass made of SUPERTWIST; the tread, a thick, deep-cut All-Weather; the sidewalls reinforced against rut-wear. Costs a little more, naturally. But in any hard service worth it, and then some!

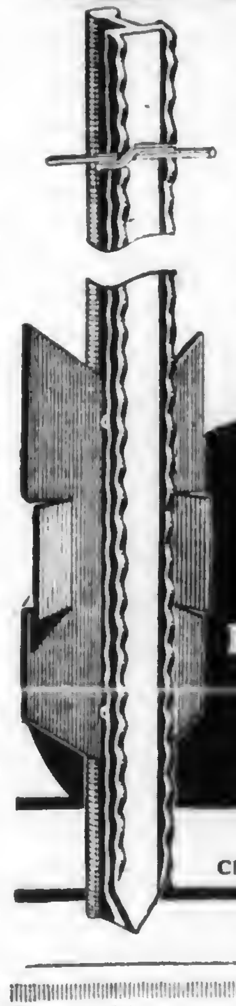
Zinc Insulated

U.S. FENCE



There is no more economical or dependable fence construction than Zinc Insulated U. S. Fence supported by Banner (formerly Arrow) Steel Posts.

A heavy coating of zinc, uniformly applied to every wire of U. S. Fence, insulates it against rust and protects it under all kinds of weather conditions.

Banner Steel Posts, with their railroad rail design and large, slit-wing, patented anchor plates, root firmly into the ground, hold the fence severely in line, and give many years of service.

Both are sold at NO EXTRA CHARGE. Together they offer the greatest economy, giving many more years of hard service at less cost per year. Ask your dealer.

Markets

PHILADELPHIA MARKETS

March 30, 1925.

PRODUCE

Increasing supplies of the early southern spring vegetables, together with continued liberal supplies of the more hardy winter vegetables, and the starting of some of our more nearby early vegetables, are the features of our vegetable market at this time. Supplies of vegetables are very plentiful, and with the advancing spring season there is being noted a greater and greater variety to be found, with prices gradually seeking lower levels. All the early southern spring vegetables have declined in price during the past week. Asparagus ranges from 15c to 30c or 35c per bunch lower; new potatoes are fully $1@1.50 per barrel lower; beans about $2 per hamper lower; cucumbers about $1 per hamper lower; peas about 50c@$1 per crate lower; squash about 50c@$1 per carte lower. On the other hand most of the winter vegetables such as beets, carrots, parsnips, onions, old potatoes and sweet potatoes show very little material change. Some of the nearby vegetables that are on our market include rhubarb, scallions, dandelion greens, together with some hot house products.

Vegetables—ARTICHOKES, Calif, box, $2@2.50. ASPARAGUS, Calif, doz bchs, $3@6.50; S Carolina, doz bchs, $3.25@5.50; Georgia, doz bchs, $3@5.25. BEANS, Fla, green, hmpr, $3@6, do, wax, hmpr, $3@5.50. GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, March 28, 1925.

Cloverseed, cash and March $16.50, October, $13.25. Alsike, cash and March, $14; August, $12 bid. Timothy seed, cash and March, $2.80; May, $2.90; September, $3.25.

County News and Comment

uphin County, Pa.—Weather spring- with plenty of rain. Condition of n fields and of grass fields very good. ers have begun spring plowing. y farm sales. Horses and cattle sell . Indications that some farms will without tenants during the summer. ltry raising will be more extensive n last year. Roads in some sections in very bad condition. Prices of at vary greatly. Corn, $1.50; oats, ; hay, $17; potatoes, $1 bu.; butter, ; eggs, 30c.—J. F. M., March 21.

ayette County, Pa.—Some spring ing done in the county. Have been ng a large amount of rain in the last k or two. Most of the market prices at the same as last month. Still plenty ay to be sold and it looks as tho there be some hold over if the demand does start up very soon. Appearances are t there will be a larger amount of ing done this next summer than last r. Wheat crop for this year looking bad. Public works still idle and signs of resuming work again. Still ity of sickness in the county.—E. H. March 18.

ilton County, Pa.—We are having spring weather at present; farmers busy plowing, gardens are nearly all le, grass fields are in fine condition. in, however, is not up to the average this time of year. Clover seed is practically all sown. Roads are in bad condi- . Very few vacant farms this year. it growers report peaches nearly all n; apples are good so far. Prices: , 25c; butter, 37c; wheat, $1.70; oats, ; hay, $14; potatoes, 90c.—T. H. T., rch 26.

ackawanna County, Pa.—We had the mest February in a quarter of a century in this county, the temperature hing sixty-four degrees on the ninth. lowest mark was on the third when degrees was recorded. On the twenty-seventh a blizzard raged with a velocity of wind of thirty-nine miles per . At about 9.30 on Saturday evening, twenty-eighth, a slight earthquake felt thruout the county. Tho buildings swayed slightly no real damage was rted. March has been warm and cold very sudden changes. There is much ness thruout some sections. Farmers busy cleaning up, trimming trees, cutting summer wood and hauling lime and ilizer. Potatoes, 90c@$1; eggs, 40@ , stewing fowls, 30c; fryers, 25c, lesale price paid at the farms.—E. A. March 18.

icholas County, W. Va.—On account he slack work along Kanawha River the coal mines, the market for farm ducts has been very dull. The work improved some but the restlessness ng the laboring class and the uncertainty for the future seem discouraging he farmer. Farmers here do not seem buying fertilizer as liberally as they last year. There seems to be considerable activity in the lumber business in holas County and prospecting for oil gas is attracting some attention. Several good producing gas wells have been ck in different part of the county. rge part of Nicholas County is under for oil and gas and the oil companies are paying up the leases. This will considerable money into the county hey continue to pay the lease. There likely to be considerable prospecting the coming summer, but this will ourage farming.—A. J. L., March 19.

arren County, Pa.—March came in a lion, snowstorm, high wind. All s of weather since; warm, balmy ng days followed by snow and cold; a great deal of rain and wind. Mother Nature is cleaning house. Many birds back—robins, bluebirds and blackbirds. Farmers have begun their spring k, plowing, hauling manure, repairing es, etc. Not much maple syrup or r made this year as we have not cold nights followed by warm days. eady many chicks being handled. at interest being displayed in poultry, purebred cattle and tested seeds. ects seem to be progressing in all . Not many auction sales this spring. prices about the same with the exception of butter, which raised from 40c c.—H. C. J., March 21.

ayne County, Pa.—Texas Township, county seat town of Wayne County, e next one in line for tuberculin testing. Nearly ninety per cent of the cow ners are now signed and County Agent keley and Township Chairman D. M. expect to have the rest in a few days. a handful of dairy farmers in the nship and a majority of the cow owners have less than four cows. There are a number of butchers and cow dealers in [illegible] realize advantages of testing and are giving ir support. Sterling township has already signed better than ninety per cent her dairymen. Starrucca borough is ed up one hundred per cent. The Extension Association has cooperated with Farm Bureau to bring in two car ds of Michigan russet seed for planting. Irish Cobblers and Number Nines also being secured for the growers. and the better seed has grown up by ns of demonstrations put on by the [illegible] with the help of County Agent [illegible] These demonstrations showed rly that good seed and careful spraying are important factors in potato growing.—E. B. [illegible] March 18.

rk County, Pa.—Last month we lost of our most prominent and respected citizens, the Honorable A. B. Farquhar, manufacturer of all kinds of farm machinery. A movement to rid York County of cattle that are affected with tuberculosis has been started and is meeting with good success. More than 1300 farmers have signed the applications to have their herds tested. At least two townships have the necessary ninety per cent of farm owners signed to authorize a 100 per cent test of those townships and several others are nearing that mark. Many farmers have their manure all out and all their sod land plowed and in a few cases they have started to plow corn stock ground. Also, there are reports of oats sowed and potatoes planted. Grass fields are beginning to show green and the wheat fields are looking good, especially the early sown. A number of farmers have their clover seed sown. The seed corn problem for York County is serious as a big majority of the farmers will have to buy seed. The county farm agent is busy looking for good seed supplies for planting time. Interest in the ton litter of pigs' contest this year greater than it was last year when York made quite a record. Wheat, $1.65; corn, $1.20; oats, 60c; eggs, 28@30c; butter, 30@35c; four per cent milk, $2.40 cwt.; calves, 13c; potatoes, 80c@$1; chickens, 22@26c; hogs, 13c live weight.—W. K., March 24.

Lancaster Tobacco

ACTIVITY among buyers of the 1924 tobacco crop continues, somewhat abated and at lower price levels than have been paid during the past two or three months of heavy purchasing.

With the bulk of the good quality crops still bringing from 16 to 17 cents per pound, reports become current last week that buyers had adopted a scale of 12 and 13 cents in some sections of the county, and were getting good crops at those figures in neighborhoods somewhat away from the beaten path. In the lower end section, it was said that buyers had been contracting for some leaf at prices of 7 and 8 cents thru. At least 30 per cent of the 1924 crop is still unbought.

Organization is in the air. A group of growers last week issued a call for a meeting of all tobacco farmers who have not yet sold their 1924 holdings for the purpose of devising ways and means whereby the packing and storage of this tobacco can be financed, with the object of holding for a better price than is now being offered. Frank M. Evans, of the American Farm Bureau, and J. W. Alsop, president of the Connecticut Growers' Cooperative Association, spoke before about 500 growers last Tuesday on the subject of cooperative marketing. The upshot of the discussion at this meeting was the appointment of a committee of business men and bankers to name a committee of organization who will be empowered to act in the matter of drafting plans for the formation of a marketing association to handle the locally grown crop of Pennsylvania cigar leaf tobacco. Actual organization will probably start early this spring.

The delivery season is well under way, and growers are busy cleaning up their old leaf to get it out of the way ahead of the spring work. Warehouses are jammed by the heavy deliveries that are being made daily, and packers state that the leaf is coming in in very good shape.—Garden Spot Farmer.

Feed Prices

THE quotations are for transit and nearby shipments, Thursday March 26, 1925, according to the Pennsylvania Bureau of Markets, the New Jersey Bureau of Markets, and the United States Bureau of Agricultural Economics, cooperating. The figures show the approximate cost of feed per ton (all in 100-lb. sacks) in carlot sight draft basis delivered on track at Philadelphia and Scranton.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Pure spring bran	$29.00
Coarse spring bran	27.50
Soft winter wheat bran	33.00
Hard winter wheat bran	32.50

41 per cent cottonseed meal	44.50
43 per cent cottonseed meal	46.50
34 per cent linseed meal	43.20

Farm Program for Jersey

THE New Jersey Federation of County Boards of Agriculture has secured the cooperation of the state agricultural institutions in the proparation of a long time agricultural program for the coordination of production, marketing and the economic problems confronting New Jersey farmers, according to a statement just issued by that organization. The need of a definite program for the business farmer has been felt for some years and a committee of agricultural leaders, representing the farm interests of the state, appointed last summer, met at Trenton, N. J., last week, (March 26) under the auspices of the New Jersey Federation to crystallize sentiment along such lines.

Summarizing the call for statewide program of agricultural development, H. E. Taylor, Secretary of the New Jersey Federation and also Secretary of the Program Committee, states:

"The advancement of farming as an industry in New Jersey carries with it the need for a coordinated plan of action on the part of all farmers. Such a development means the placing of farming more upon a business basis and in line with approved methods of operation in the other basic industries. This is not a matter which can be brought about by the average farmer or by any one group of agriculturists or by any one institution. It is a development that requires the joint effort and approval of all the farm interests in the state."

The committee having the program in charge consists of: Chairman, Prof. H. J. Baker, Director, New Jersey State Extension Service; Secretary, H. E. Taylor, Secretary, New Jersey Federation; H. B. Hancock, President, New Jersey Federation; D. H. Agans, Master, New Jersey State Grange; H. H. Albertson, Secretary, New Jersey State Horticultural Society; Prof. Alva Agee, State Secretary of Agriculture; Dr. J. G. Lipman, Director, New Jersey Agricultural Experiment Station; H. B. Kummell, Chief, Department of Conservation and Development; W. I. Hamilton, President, New Jersey State Chamber of Commerce; and A. R. Scully, Executive Committeeman, Morris County Board of Agriculture.

Chicks Dying From White Diarrhea
How to stop it in 48 hours
A letter from Chas. N. Kittinger, of Willows, Calif., contains good news for poultry raisers who are losing baby chicks. He says:
"Twelve of my chicks had diarrhea when I started giving them Avicol. By the second day the trouble disappeared, and now they are all lively as crickets. If I had only known of Avicol sooner, I would have saved lots of chicks."
There's no doubt that Avicol is wonderful both for preventing and stopping disease in baby chicks. It has a specific action as a bowel antiseptic and regulator. Usually within 48 hours, the sick, droopy chicks are lively and healthy. A liberal supply of these tablets can be obtained by sending fifty cents to The Burrell-Dugger Co., 549 Allen St., Indianapolis, Ind. As Avicol is positively guaranteed to do the work or money refunded, it costs nothing to try. Readers will be surprised at the way chicks grow and develop in vigorous health when these tablets are used in the drinking water.

Science Declares War on Wood Chucks

Woodchucks are facing extermination in those sections of the country where they are doing heavy damage. Farmers are up in arms, and it looks bad for the woodchucks. These destructive rodents are difficult to hunt or trap, but science has found a means of reaching them with a gas attack that they cannot dodge.

CYANOGAS
REG U S PAT OFF
CALCIUM CYANIDE

placed in small quantities in the openings to burrows gives off hydrocyanic acid gas which kills the woodchucks where they live.

Your dealer has Cyanogas (Calcium Cyanide) or can get it for you. Or, we will deliver a 5 lb. tin sufficient to kill all the woodchucks in 80 burrows for $2.50.

Fruit and Vegetable Imports

Carlot Receipts at Reading and Erie during 1924

CARLOT receipts of fruits and vegetables in Reading during 1924 were only slightly heavier than in 1923, shown by the comparison of 1685 with 1619 cars, according to the Pennsylvania Bureau of Markets.

Forty per cent of the receipts, or 675 cars, consisted of mixed produce, an average of over two cars for each week-day. These cars contained many fruits and vegetables bought in small lots on the Philadelphia market and shipped to Reading.

Receipts of bananas were heavier than for any other single commodity. The uniform demand for this product is noteworthy, 240 cars having arrived on the market last year. Supplies were largest, of course, during the summer months.

Potatoes followed in importance with 209 cars, a decrease of about 25 per cent. This entire decrease occurred between September and the end of the year, for receipts of Pennsylvania potatoes alone dropped from 59 cars for these four months in 1923 to only 8 cars for the corresponding period last year.

The probable conclusion is that after the beginning of the digging season, the market was supplied to quite an extent by local stock. Receipts from Maine, Michigan and Wisconsin also dropped.

Shipments from Pennsylvania

Forty-four cars of fruits and vegetables came to Reading from Pennsylvania producing sections, as follows: 9 apples (Adams 8, Berks 1); 1 cabbage from Erie; 4 grapes from Erie; 1 peaches from Berks; 29 potatoes (Lehigh 13, Berks 8, Schuylkill 4, Potter 3, York 1).

Total carlot receipts of fruits and vegetables in Reading during 1924 are: Mixed produce, 675; bananas, 240; potatoes, 209; watermelons, 103; oranges, 97; grapes, 63; cabbage, 60; apples, 57; cantaloupes, 54; peaches, 53; strawberries, 20; celery, 15; sweet potatoes, 15; onions, 5; lemons, 4; tangerines, 4; grapefruit, 3; pineapples, 3; tomatoes, 3; lettuce, 2; total, 1685 cars.

Imports at Erie

THE total carlot receipts of fruits and vegetables in Erie were 80 cars last year.

Oranges were the most important commodity arriving on the market. A distinct preference was shown for California stock, since 131 of the 13 cars of oranges came from the Pacific Coast state. Bananas followed with 118 cars, all of which came thru the port of New York except one, which was shipped from the wharves at New Orleans.

Potatoes ranked third in volume of receipts with 114 cars for the year. Eighty-five per cent of the potato receipts constituted early potatoes, and only 18 cars represented late stock. This indicates that Erie County producers met the bulk of the market demands from fall to spring and in addition shipped over 10 cars.

Many Cars of Watermelons

Sixty-three cars of watermelons, double the 1923 receipts, were on the market in the summer months. Practically all of these were supplied by Georgia and South Carolina. New York state shipped in over half of the 62 cars of apples received during the year. Other areas contributing apples were Delaware, Michigan and several western states.

Total carlot receipts of fruits and vegetables in Erie during 1924 are as follows: Oranges, 138; bananas, 118; potatoes, 114; watermelons, 63; apples, 62; peaches, 59; grapes, 3; cantaloupes, 35; strawberries, 3; lettuce, 23; celery, 22; onions, 2; cabbage, 19; grapefruit, 18; mixed produce, 14; lemons, 8; pineapples, 7; sweet potatoes, 7; turnips, 1; cranberries, 2; pears, 2; squash, 2; carrots, 1; tomatoes, 1. Total, 8 cars.

Delaware State Notes

UNUSUALLY mild weather for February was brought to a sudden close by the severe cold snap of February 27 and 28, bringing the lowest temperatures for these dates for over thirty years. This cold weather was welcomed by fruit growers who were beginning to be alarmed over the rapid development of peach and apple buds.

* * *

Planting of cannery peas was started in Kent and Sussex Counties during the week of March 9. Due to favorable weather for early plowing the average of this crop is expected to be somewhat larger than last season.

* * *

In Kent and Sussex Counties potato growers use second crop Irish Cobbler seed which is secured from growers in Salem County, New Jersey. Green Mountains do better in the northern section of New Castle County, and two car loads of this variety have been secured by the New Castle County Farm Bureau from northern New York.

* * *

Two extension schools for farmers were conducted by the University of Delaware during the first week in March. The four days school at Hockessin in the northern part of the state was general in nature, the subjects covered being crops, livestock, poultry and orchards. Two sessions for women were held under the direction of Kathryn E. Woods, State Home Demonstration Leader, who gave instruction in reed basket making and household decorations.

A two-day school for fruit growers was held at Camden in the center of the orchard section of Kent County, at which the following subjects were discussed: Orchard Nutrition, Control of Aphis in Fruit Production, Why and How to Prune, Apple Scab Studies, Points in Grape Pruning, Black Rot Control in Grapes, Inspection Service at Shipping Point, Fruit Ripening and Storage.

* * *

In order that tomato growers of Kent County may be supplied with disease-resistant tomato plants of standard varieties suitable for commercial packing, local canneries are cooperating with County Agent Russell E. Wilson in establishing centralized plant beds from which growers will secure plants at setting time at nominal cost. Assistance in this project is being given by the Tri-State Canners' Association and the University of Delaware.

This is the third year that this project has been conducted. Late frosts and wet weather injured the plants during each of the two preceding seasons, but sufficient good results were obtained to convince growers and canners that this was a practical method of combatting disease and standardizing tomato varieties.

* * *

In the fall of 1923 the Delaware State Highway Department completed a system of concrete highways reaching from one end of the state to the other, with several intersecting roads which reach all the main agricultural sections of the state. Previous to this time most of the surplus farm produce of the state was moved out by rail or boat.

Movement of farm produce by truck began with the opening of the 1924 season, and, realizing the importance of securing accurate information as to the value of the state highways to farmers, the State Highway Department established weighing stations along the main highways during the shipping season. Each truck load of produce going to market was weighed and the figures turned over to the State Bureau of Markets and incorporated in a report just issued.

The shipments by truck of the various Delaware farm products are as follows: apples, 27,553 bushels; peaches, 28, baskets; pears 789 baskets, strawberries, 39,843 crates; 100,501 crates; cantaloupes, cucumbers, 18,063 bushels; watermelons, 100 tons; grapes, 15,848 baskets; sweet potatoes, 14,721 bushels; potatoes, 13, bushels; blackberries, 18,369 crates; huckleberries, 2070 crates; tomatoes, 60,431 baskets; sweet corn, 2754 bushels; string beans, 13,103 bushels; peas, 1433 bushels; canned fresh vegetables, 10,000 baskets; canned vegetables, 14,000 cases; wheat, 1825 bushels; corn, 833 bushels; hay, 410 bales.

While figures showing the relative cost of rail, boat and truck shipments are not available, the shipments by truck undoubtedly offer the advantages of quick delivery, and shipments by small producers, who would otherwise have to wait for the assembling of car load lots, or be forced to sell thru brokers.—C.

Reliable Day-Old Chick Hatcheries

500,000 BABY CHICKS for 1925

Improve Your Flock

With our baby chicks. Over forty years in the chicken business, shipping better bred and better hatched chicks from standard bred and heavy-laying parents. Our experience and standing guarantees high grade stock either for improving flocks or as foundation stock for beginners.

We guarantee safe delivery and satisfaction.

Ulsh Poultry Farm & Hatchery, Port Trevorton, Pa.

JONE'S BARRED ROCKS **CHICKS**

Owing to the great demand for chicks, I started Incubator Nov. 17. Breeders strictly culled by State Board of Agriculture. This combined with New Incubator 150,000 eggs and 10 years' experience in baby chick business puts me in a position to sell you Good Strong Pure Bred Chicks at reasonable prices. Pedigreed Certified Stock. Contest Records: 313, 288, 268, 251. Catalog.

A. C. JONES, GEORGETOWN, DEL.

CLOYD NEIMOND, McAlisterville, PA.

"The crows went over and pulled up my neighbor's corn"

writes J. B. Meyers, of West Salem, Ohio. And from that day on Mr. Meyer's crow troubles were over, "for," he said further, "I tested your Crow Repellent and found it to be just as you recommended."

"Will never try to plant corn without it," is what C. C. Mulchmore, Pike, N. H., says about its value.

"I could not find a hill pulled," is the word we get from G. White, Whitehall, N. Y.

"I recommend it for every corn-raiser," is the way the letter reads from J. Putnin, Wolcott, Vt.

"Crows give my corn-field a wide berth," says H. Van Onlen, Catskill, N. Y.

Stanley's Crow Repellent

is the one sure cure for crow troubles. Not only crows, but moles, squirrels and all pests will leave your corn-field severely alone, if you coat your seed-corn in it, just before planting. You don't have to wait for it to dry, and it positively will not clog the planter. It is not poisonous, and therefore, will not kill birds or animals, but, it WILL keep your cornfields free from damage that runs into money and time, if you have to keep re-planting all the time.

Large can, enough for 2 bu. of seed-corn (8 to 10 acres), $1.50. Half size can, $1.00. If your hardware, drug, or seed store doesn't have it in stock, then order direct. Read our "Money Back" guarantee. Address, Cedar Hill Formulae Co., Box 500R, New Britain, Conn.

Planting for the Future

More Than One Kind of Profit in Arbor Day

By ROBERT I. WEIGLEY, Lebanon County, Pa.

WHEN I was a small boy my grandfather taught me how to graft as well as how to plant trees. It was a proud moment for me when I grafted my first cherry and apple trees successfully. That is pretty long ago, but when I look about me during the harvest seasons, I am still thrilled for a moment with the old feeling of my boyhood days, for the trees are just coming into their prime. Every spring since that memorable day, I plant and graft at least some variety of tree or plant or vine.

You may advance the old argument that I will not be here to eat of the fruits of my labors and that maybe thankless strangers will eat the peaches and apples and grapes from the trees and vines which I now set out and mind so tenderly. But that is the wrong spirit to have now, with Arboy Day near at hand.

Lincoln's Feeling about It

Lincoln had the grandest and truest conception of Arbor Day when he said: "I want it said of me that I plucked a thistle and planted a flower where I thought a flower would grow."

Considered only from a mercenary viewpoint, I think I know that in the not distant future an acre or two of fine trees will bring at least a thousand dollars more for a farm on which they are growing than for a farm lacking such trees.

Our climate, our crops, our standing as a nation in the future, and even our very lives, depend upon the trees we set out today. History tells us that a nation with dwindling forests is a falling nation; that a nation with no forests at all, is lost; and that a new nation, rich in virgin forests, is the coming nation. Let us heed this warning of history so long as there is still time.

Trees Her Inspiration

Most of us have read the poem entitled "What plant we with the apple tree?" The good poet has answered so finely for us but there is very much more to be said. When Gene Stratton Porter's father laid out his farm during those harsh pioneer days, aided by his fine wife and children, he hardly knew that his fields, his chestnuts, his apple, plum and cherry trees and his flowers would be the means whereby little Gene, then scarcely strong enough to hold a tree that was being planted, would achieve fame as one of the greatest story tellers of all time. Such is the fact. Anybody acquainted with the old Porter homestead can see glimpses of the renowned place in "Laddie," "Freckles," "The Girl of the Limberlost," etc.

Riches Kept to Their Hurt

Let us not give the excuse that we are too busy to plant a tree or a rose. Money and money-earning are all right in their places, but we should not look to gain as our chief end in life. The voice in the good book says: "There is a sore evil which I have seen under the sun, namely, riches kept for the owners thereof to their hurt." Let this be our spirit, "If I live to be a hundred years old I will still plant some trees or flowers and thus help Nature to keep from running out of stock."

Any spring day is arbor day for the lover of nature. If you find a little seedling cherry tree or an apple or peach striving to make a stand where the cattle or the teams will trample it in the dust, have pity on it and take it along. Plant it where it has a show. It will repay you manifold. Again, take a minute or so to plant a border with flowers, or start some little beds, and it won't be long before you can see all about you such beauty as Thompson tells so beautifully about.

"Who can paint
Like Nature? Can imagination boast
Amid its gay creation, hues like hers?
Or can it mix them with that matchless skill,
And lose them in each other, as appears
In every bud that blows?"

A Most Important Duty

Finally, it is our duty as fathers and mothers to beautify our surroundings for the benefit of our children. It is a duty we owe to our neighbors and to our town or community, and it is a fitting duty we owe to ourselves so that we may spend and enjoy every moment of our lives to the utmost.

This is the Creed of Beauty by Armand: "I believe in Beauty, in the power of Beauty to give happiness, and that to help create, develop and perpetuate Beauty is the finest work I can do in the world."

Applying Fertilizer

COMPARATIVELY few farmers are able to compare, satisfactorily, different methods of crop production on their own farms. That is rightly left to the experiment stations, which have performed services of untold value since they were established.

An instance is found in the results of work done by the New Jersey Experiment Station to determine the effect of placing fertilizer in various positions in the soil with respect to potato seed pieces. These results bear out the findings of other investigators, namely that the improper application of fertilizers may and often does have a decidedly adverse effect upon the yield. A difference of as much as seventy-eight bushels of potatoes per acre resulted from two different methods of applying fertilizers, as follows:

Method of fertilizer application	Yield
Above seed, with soil between	128 bu.
In direct contact with seed..	132 bu.
Mixed with soil in row.....	152 bu.
Beside seed, and on same level	173 bu.
Beside seed, but lower......	206 bu.

While fertilizers should be applied properly to all crops if maximum profits are to be obtained, the necessity is particularly strong in the case of such crops as potatoes, where all the fertilizer is usually applied at planting time, and of wheat and corn which are often drilled at the same time as the fertilizer.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

RICKETS.—I have three pigs which are five months old; none of them seem to have much use of their fore legs; they crawl instead of walk. I have thought they didn't eat enough food.—H. F. R., Fishers Ferry, Pa. The lameness or loss of control of the legs of a young pig is an evidence of rickets or a condition of the bones in which mineral matters are perhaps lacking. In some cases bones break, especially the shoulder blade, thru the neck of the bone. Contributing causes are insanitary housing, lack of exposure to the direct rays of the sun, and to lack of certain vitamins of green or dried legumes such as alfalfa and clover. You should place within their reach slacked lime or ground limestone, wood ashes, salt, or steamed bone meal. Are you sure that these pigs are free from worms? Remember, you should feed pigs a balanced ration and keep them clean.

LYMPHANGITIS (Milk-leg).—Will you please publish a remedy for "milk-leg?" I would like to have a permanent cure for my mare.—F. E., Mt. Pleasant, Pa. I imagine you have a case of lymphangitis, the disease is known by a great variety of names, as "water farcy weed," "Monday morning disease," "shot of grease," "big leg," "milk-leg," etc. Chronic lymphangitis is incurable, but the practice of giving the animal regular daily exercise, keeping the bowels open, and feeding roots to the idle animal instead of grain, will generally ward off future attacks.

LUMPY JAW.—I have a Guernsey heifer which has a hard bunch on her face between her eye and nostril. We thought she might have been kicked by a mule as she ran in pasture last fall with several mules. We are not using her milk.—F. J. D., Kersey, Pa. If she has lump jaw and the bone is affected, doubtless she should be fattened and sold for beef. Of course, if the bunch contains pus, her carcass should not be used for human food. If the bunch is soft and movable, paint with tincture of iodin daily, also give her one dram of potassium iodide at dose daily for two weeks.

TICKS—NASAL CATARRH—CORNEAL OPACITY.—Last summer I purchased ninety sheep. Some of them were quite thin, but after they had been pastured in good feed they gained and looked fine by winter. Some time later I discovered some of them had too many ticks; some coughed and discharged mucus from both nostrils. Some of them seem to have lost their appetite for food. Two have died, two others are sick. I also notice a large abscess on neck of one sheep, this boil was full of pus. Another sheep has one eyeball covered with white scum. Is this a symptom of grub-in-the-head?—G. B., Titusville, Pa. Coal tar or tobacco dips are effective in destroying ticks; a second application is necessary two or three days after the first. After shearing time the ticks are apt to leave the sheep and live on the lambs. Give each sheep ten grains of dried powdered sulphate of iron at dose twice a day in ground feed. Chronic grub-in-the-head is generally incurable, but loss of vision is not always a symptom of it. Leave the eye alone.

FELINE DISTEMPER.—What is the matter with my cats? They have head trouble and every one which takes the disease dies. The nose and eyes fill with mucus. Had I better destroy those I have and secure new stock?—L. E. G., Venango, Pa. Veterinarians have not yet discovered the real cause of feline distemper. Cats showing no symptoms of the disease and in perfect health may be carriers of the infection. This is especially true of the female, who may infect litter after litter of kittens, altho in every way normal herself. In the absence of exact knowledge of the causative factor all treatment must of necessity be symptomatic and, therefore, to some extent, guess work. Destroy all your cats, clean and disinfect their kennel, and select other stock from a farm where they have never had any distemper. Kindly understand many cats never take distemper, but it is true, one attack does not confer future immunity; if anything it renders the cat more susceptible to a second attack.

H. G., Cazenovia, Pa.—Your kittens suffer from feline distemper and are incurable; however, with good care one or both might seemingly recover, but it is doubtful.

R. D., Silver Springs, Md.—Your rabbit should be destroyed. His ailment is incurable.

ANGER time for horses. Legs are soft—muscles flabby. Apply Gom-'s Caustic Balsam for strained, tendons or lameness of any kind. Known years as the quick, reliable remedy for any ailments of horses' legs and hoofs. it yourself. Directions with every Won't scar or discolor hair. Select the Right Analysis for Your Crop

Through years of research and actual field experiments, the state agricultural colleges and experiment stations have determined the analyses of fertilizers which will give you the best results on each crop and soil.

For Pennsylvania, the Pennsylvania Agricultural Experiment Station recommends the following analyses:

Corn—No manure or clover sod, poor soil, 2-12-4, 3-10-6; medium soil, 0-12-6; rich soil, 0-16-0; with manure or clover sod, poor soil 2-12-4, 0-16-0; medium or rich soils, 0-16-0.

Wheat, rye and oats—No manure or clover sod, poor soil, 2-12-4; medium soil, 2-12-4, 0-16-0; rich soil, 0-16-0; with manure or clover sod, all soils, 0-16-0.

Alfalfa when seeded—No manure or clover sod, medium soil, 2-12-4; rich soil, 0-16-0; with manure or clover sod, poor soil, 2-12-4, 0-16-0; medium or rich soils, 0-16-0.

Alfalfa, top dressing—No manure or clover sod, medium soil, 0-12-6, rich soil, 0-12-6, 0-16-0; with manure or clover sod, poor or medium soils, 0-12-6, 0-16-0; rich soil, 0-16-0.

Timothy—No manure or clover sod, poor soil, 7-6-5, 6-8-4; medium soil, 7-6-5, 10-5-0; with manure or clover sod, poor soil, 0-16-0.

Potatoes—No manure or clover sod, poor soil, 3-10-6; medium soil, 2-12-4, 3-10-6; rich soil, 2-12-4; with manure or clover sod, poor soil, 3-10-6, 2-12-4; medium soil, 2-12-4; rich soil, 0-16-0.

Vegetables, (Leaf crops.)—No manure or clover sod, medium or rich soils, 6-8-4, 4-8-4. With manure or clover sod, medium soil, 4-12-4, 4-12-0; rich soil, 4-12-4, 4-12-0, 0-16-0.

Tomatoes, peppers, cucumbers, melons, egg plants—No manure or clover sod, all soils, 6-8-4, 4-8-4; with manure or clover sod, poor or medium soils, 4-12-4; rich soil, 4-12-4, 4-12-0, 0-16-0.

Vegetables, (Root crops.)—No manure or clover sod, poor soil, 5-10-5, 4-8-6. Medium soil, 4-8-6, 4-12-4; rich soil, 4-12-4. With manure or clover sod, poor soil, 5-10-5, 4-12-4; medium soil, 4-12-4, 2-12-4; rich soil, 3-8-3, 0-16-0.

Tobacco—With or without clover sod, medium and rich soils, 5-8-5, 4-8-4.

As an Authorized Swift Agent for the sale of Swift's Red Steer Fertilizers, we are co-operating with the Pennsylvania Agricultural Experiment Station in recommending and selling these analyses.

Come in and we will help you select the analysis and decide on the amount per acre to make you the most profit.

asa

Authorized Swift Agent

So carefully mixed are Swift's Red Steer Fertilizers that each plant gets its full share of each plantfood. Result—even growth, even maturity, maximum yield

An application of 300 pounds of fertilizer per acre is equivalent to about one ounce—a little more than a spoonful—to each square yard of land

A spoonful of fertilizer to each square yard of ground! Each plant gets so little that it is vitally important that the fertilizer be thoroughly and evenly mixed

"It pays to use them"
Bigger yields have proved it

Most farmers know that it pays to use fertilizer on all crops. The real question is whose fertilizer and how much to apply per acre to make the most profit.

To produce large yields of high quality crops, the fertilizer must contain the right amount and kind of plantfood properly processed and mixed.

Fertilizers made right

Swift's Red Steer Fertilizers are thoroughly and evenly mixed to furnish each plant a balanced ration. Only the highest grade and most productive sources of plantfood are used in their manufacture.

The formulas and special processes employed are the result of years of careful study and experimental work.

Every operation, from the careful selection of the raw materials to the mixing, testing, and shipping, is closely supervised by experts—experts in chemistry, agriculture and manufacturing.

Every bag of Swift's Red Steer Fertilizers is backed by the 50-year-old reputation of Swift & Company for making each product the best of its kind. The farmer who buys Swift's Red Steer Fertilizers, therefore, is assured of fertilizers that will return to the most net profit.

A good investment

"It pays to use them"—not only on money crops but on all crops. This is testimony of a vast number of farmers in most every state in the Union.

There is a Swift factory convenient every territory. But Swift Service is than that.

In your own community is the A. S. (Authorized Swift Agent). Co-opera with Swift & Company, your County A and State Agricultural College, he ke posted on the best farming methods. knows the farmer's needs and problems is able and willing to give you worth- service.

Discuss your fertilizer needs with A. S. A. He will explain more fully the you can make through a liberal use Swift's Red Steer Fertilizers. Should fail to locate him readily, write us and will gladly put you in touch with him.

It Beautifies

Save the surface and you save all

LUCAS Tinted Gloss Paint will make your home beautiful. It will attract the favorable attention of passersby. It will cause your home to stand out among its neighbors. There is a wide variety of colors of this pre-eminent paint—and each of them is a *fine* color, clean and clear.

Its *exceptional* beauty when it is first applied and the *continuance* of this beauty are both due to the same causes—quality of materials and skill in manufacture.

IT COVERS more square feet per gallon and more thoroughly hides the surface, due to finer grinding of materials, a higher percentage of pure linseed oil, and *LUCAS* superior methods of combining all ingredients into one perfectly finished product.

IT BEAUTIFIES and its beauty lasts because of its high gloss and clear, perfect shades, made with pure tinting colors of *Lucas'* own manufacture, possessing maximum permanency.

IT LASTS longer because it is made of highest grade materials, carefully selected, scientifically combined by skilled workers of long experience.

IT PROTECTS positively because its smooth, glossy surface is resistant to weather. Its elasticity prevents checking or cracking during temperature changes, consequently preventing moisture, the cause of decay, from getting to the underlying surface.

IT IS ECONOMICAL
Its GREATER COVERING CAPACITY reduces the cost of application.
Its GREATER LASTING QUALITY decreases the cost per year of protection.
Its GREATER PROTECTION saves costly repairs.
Its GREATER BEAUTY increases the value of your property, reflects prosperity and radiates happiness.

You can preserve your property on convenient time payments. Ask the *Lucas* dealer in your community or write us for name of nearest dealer.

Hoover's Ideas on Farm Needs

Secretary Defines Views on Agricultural Policies

BECAUSE of the many adverse criticisms which have been made concerning Herbert Hoover's attitude towards agriculture and his alleged purpose to dominate the agricultural department he has sent out the following letter in which he states his position. We are glad to give this letter publicity in the hope that it may correct some of the erroneous ideas concerning his opinions.—Editors.

"When requested by the President's Agricultural Conference for my views as to long view policies for obtaining a larger margin of profit to the farmer I stated:

"(a). That I favored cooperative marketing; the creation of a strong independent Federal Marketing Board, chosen from farmers, whose duty would be to build up cooperative marketing and improve marketing generally; the removal of present legal restraints upon farmers' marketing and producing organizations.

"(b). That I favored an effective protective tariff on the import of agricultural products so that our American farmers might have the job of profitably producing as large a part as possible of the $800,000,000 of wool, flax, dairy produce, vegetable oils, etc., that we now import. By protection, I pointed out our farmers might have for themselves the market to the 15,000,000 increase in consumers in our own population which will come about within the next ten years, instead of having that market considerably supplied by cheaper labor in foreign countries; and that the farmer would in these circumstances be less dependent in raising products for export to foreign countries in competition with cheap lands and cheap labor.

"(c). That in order to maintain the strongest domestic demand for farm products we must promote general business stability in the country, so that with continued full employment of our workers the farms would not be subject to such disasters as the slump in domestic consumption thru unemployment, which brought greater ruin to the farmer than to anybody else in 1921; that we were carrying on with considerable success methods of maintaining such stability; that a great contribution could be made to reduction of the cost of what the farmer buys thru the elimination of economic waste in industry and commerce, together with such developments as the St. Lawrence and Mississippi Rivers, the improvement of our railway terminals, the economic operation of railways, and the consequent lowering of transportation charges.

"(d). That I did not favor price-fixing either directly or indirectly by the government buying or selling farm produce; that I was convinced these measures would ruin the farmer, and would transfer his independent action to the government bureaucracy; that there were six times as many families consuming each different agricultural product as there were producing it, and that sooner or later the paramount political strength of the six times as many consuming families would do the price fixing and not the farmer; that all this was socialism and not help; that the law of supply and demand in the long view was running in favor of the farmer because consumers were increasing faster than producers; that this tide has obviously already set in, as witness the general turn in prices.

"While I have made no suggestion that this covers the whole farm problem, I do believe you would not disagree with this platform.

(Signed) "Herbert Hoover, March 23, 1925."

New Beetle Quarantine Area

A REVISION of the Japanese beetle quarantine regulations, which became effective March 21, is announced by the Federal Horticultural Board, United States Department of Agriculture. This revision has become necessary on account of the further spread of the Japanese beetle.

Under Regulation 2 the following townships or other poltical subdivisions in New Jersey, Pennsylvania and Delaware are included in and form the outer boundary of the regulated areas in these states:

New Jersey

OCEAN COUNTY.—Township of Brick. MONMOUTH COUNTY, townships of Howell, Freehold, and Marlboro. MIDDLESEX COUNTY, townships of Madison and Sayreville, city of South Amboy, township of East Brunswick, and the city of New Brunswick. SOMERSET COUNTY, townships of Franklin and Hillsboro. HUNTERDON COUNTY, townships of Raritan and Delaware.

Delaware

NEW CASTLE COUNTY.—Christiana and New Castle Hundreds.

Pennsylvania

BUCKS COUNTY, townships of Plumstead and Hilltown, and boroughs of Perkasie and Sellersville. MONTGOMERY COUNTY, townships of Franconia, Salford, Marlborough, and Upper Hanover. BERKS COUNTY, townships of Washington, Pike, Earl, and Douglas. CHESTER COUNTY, townships of North Coventry, South Coventry, West Vincent, West Pikeland, Charlestown, West Whiteland, East Bradford, Pocopson, and Pennsburg.

All the townships or other political subdivisions in New Jersey, Pennsylvania, and Delaware between these bordering townships or other political subdivisions and the Delaware River and Atlantic Ocean are included in the regulated area.

The restrictions on the movement of farm products (Regulation 4) have been materially revised both as to direct shipments from point of production and as to shipments from Philadelphia and other markets within the regulated area.

Fewer Commodities Now Affected

The list of regulated articles has also been considerably reduced and is now limited to such articles and types of products as have been determined as most likely to carry beetles during the active adult stage of the insect.

One new feature has been added to the regulation, namely, the provision that the interstate movement of any farm products from freight yards, docks or markets in the regulated area, irrespective of origin, is prohibited to points outside such area during periods when large numbers of beetles are on the wing, and the movement of such articles is determined by the inspector of the United States Department of Agriculture to be fraught with exceptional or unusual risk of the spread of the Japanese beetle.

Vital Factors in Peach Production

The Selection of Varieties Depends upon Markets and Location

By IRWIN LONGENECKER,
Lebanon County, Pa.

ONE of the first questions that usually confronts the "young hopeful," as he launches out into the fruit-growing business; is: "What varieties shall I plant?"

That is, indeed, an important question, and one that we will do well to consider carefully before placing our orders with the nurseryman. A number of things enter into the question for consideration, namely: location, soil, etc., the desired information being obtainable from the state and national departments of agriculture.

A wise plan of procedure is, first of all, to go to the nearest county agent and secure his cooperation, as his services are always at the disposal of the seeker for information.

In looking up bulletins it will be noticed that certain varieties are recommended for certain localities. These recommendations are based on actual experiments and are, therefore, generally speaking, reliable.

As previously stated, certain local conditions must be reckoned with and it must be remembered that these differ very materially. As an illustration we might state that, due to weather and climatic conditions, growers in the northern section of the state do not plant the same varieties as those in the southern section.

Home Market Important

The question of a good home market must not be overlooked, as that is the very thing that may in the end spell either success or failure. There is a world of difference between hauling one's peaches a distance of ten or fifteen miles to a freight office, there to be packed into iced cars and shipped to a large market where the commission men, the wholesalers, the retailers and bucksters are the distributors of your product, or being favorably located close to a good home market where a large part of the crop can be retailed direct from the packing shed.

We consider this part of the business so important that we would not plant an orchard unless we had, first of all, satisfied ourselves on this point beyond any question of doubt.

It might be of interest to note that in our own case we have retailed about fifty per cent of our crop at our packing shed at satisfactory prices, another thirty per cent was sold to dealers who came to the packing shed, and, in most cases, paid cash. About twenty per cent of the crop was delivered by our own trucks to retailers or direct to consumers.

The advantages of a good home market are many. Fruit may be left to ripen properly before picking and the consumer will generally pay more money for home-grown fruit, fresh from the trees and not bruised by much handling. Furthermore, there is genuine satisfaction in the knowledge that we are selling quality fruit to a satisfied trade.

Market and Its Requirements Should Be Studied

On the other hand, we do not wish to leave the impression that growing fruit when the long haul to market is necessary, is unprofitable. The writer is personally acquainted with a number of growers who ship a large part of their peach crops hundreds of miles to market and, seemingly, are doing so at a profit.

However, in order to do so, the grower must first make a careful study of the market and its requirements. In other words, he must be able fully to realize just what takes place after the fruit is loaded into the refrigerator cars.

To be thoroly familiar with the production end of the business and neglecting the marketing question is poor policy. The grower who is in this position is like the boy at school who, when asked by his teacher what animal it is that produces the furs his mother wears, replied "father."

In the case of the boy he seemed to know something about the consuming end and little or nothing of production. He will doubtless learn more of the subject as he grows older in the school of "hard knocks."

Let Agricultural Schools Do the Experimenting

During recent years we have had a considerable amount of experimental work done by our agricultural schools in the different states and it is, therefore, unnecessary to spend our best days in conducting costly and ofttimes disastrous experiments. Many sad tales of orchard failures are being related simply because of a woeful lack of information and a tendency to experiment without knowledge.

A thriving low-headed tree in Mr. Longenecker's orchard.

If we are going to ship our fruit we must plant varieties that will stand the long haul to market and still be salable.

If, on the other hand, we have a good local market, we may plant varieties that the shipper cannot handle at a profit.

A Good Succession of Varieties to Plant

In our own orchard, near Palmyra, Pa., we have a good succession of varieties which cover a marketing period of about three and one-half months, beginning with Mayflower, on July 4, and ending with Salway, Butler's Favorite, Billews Late, and Krummel in October.

Following the Mayflower are the Greensboro, Carman, Mountain Rose, Champion, Belle of Georgia, Niagara, Elberta, Hale, Globe, Iron Mountain, in the order named, and followed by the later varieties in October. A variety which is being profitably grown by certain of our local growers and which follows the Globe in the succession, is Chair's Choice.

It will be seen, therefore, that the grower who supplies the local market, has an added advantage in the fact that he is able to distribute his picking season over a longer period of time, providing, of course, that he does not plant too heavily of any one variety.

The first four varieties named in our succession are all white clingstones, and it is not desirable, therefore, to plant too heavily of these as they are not classed as canning peaches with the exception that a small percentage are used for spicing or pickling.

Many an unfortunate grower who allowed himself to be persuaded to plant a large block of these early clingstone varieties, afterwards found himself "sweating jelly-beans," trying to find a market where there wasn't any to be found.

The tale is told of a backwoodsman who decided to find himself a city-bred wife. He found one who was willing to join him in wedlock. He seemed to be very well satisfied with his bargain, especially so in view of the fact that her father, according to her story, was worth nine thousand dollars and she was the only daughter. After their marriage, she began to introduce her husband to a number of her brothers. He was much surprised to find that she had any brothers and said: "Why Sallie, I thought you were the only daughter in the family?"

She replied, "Yes, Bill, I am the only daughter, but I have nine brothers.

"So!" replied Bill, "ten in nine goes no times and nossing comes out."

Not so long ago the writer saw a five-acre Kieffer pear orchard in fine bearing condition with the trees loaded with large quality fruit, but, sad to relate, there was no market for them and "nossing came out" and never will, simply because there is no local market that can absorb them at a profit to the producer.

Of the newer varieties of peaches, the Early Rochester, the earliest of all yellow peaches, is rapidly taking a deserving place in the ranks of commercial varieties. It seems to be well adapted to a wide section of country and can, therefore, be planted with reasonable assurance of success.

Each Year Brings New Pests

The highway to success in growing peaches seems to become somewhat more difficult as time passes on, due to the fact that new diseases and insects are putting in their appearance from year to year and it becomes necessary to find control measures in order to keep the trees and the fruit in a healthy, growing condition.

Haphazard and careless orchard management will spell failure and ruin, as it is only quality fruit that is wanted by the majority of consumers of the present day and rightly so. As a matter of fact, it is only quality fruit that can be sold at a price which leaves a profit to the grower.

We are reminded of the saying, "Eternal vigilance is the price of liberty." The grower who can show a profit at the end of the marketing season is he who "keeps his lamps a-burning and his vessel filled with oil."

A Few New Laws

GOVERNOR PINCHOT has signed the bill agreed upon by the conference of people representing agricultural organizations and farmers for the payment for fences needed to keep deer and other game from damaging orchards and fields. The State Game Commission will be in charge and pay half of the expense, retaining a lien until the bill is paid.

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

THE last full week of March gave us weather which slightly raises my previous opinion of March. In fact, it was ideal, drying the soil and making it possible to do some much-needed work. The hotbed was fitted up and made ready for plant setting and seed sowing, and we began the lifting of the asparagus plants. The weather for several days has been so warm that they had begun to send up shoots above ground.

✦ ✦ ✦

ALTHO we had no previous experience in growing asparagus plants our success has been most pleasing. A nurseryman, inspecting them, pronounced them exceptionally fine. The roots are strong and vigorous and from six to ten inches in length. The only change we would make in planting again would be to sow the seed slightly thinner in the row. The roots are sometimes so interwined that it is difficult to separate them.

✦ ✦ ✦

I HAVE pruned the two-year-old peach trees a second time. The first time only about one-third of last year's growth was cut off, but after being advised by a nurseryman and peach grower another third was cut off. I find this is the principle followed by many of our best growers. While such heavy pruning may seem a waste to the novice, it makes sturdier, lower headed trees and larger peaches. Apple trees should not be cut back so severely.

✦ ✦ ✦

WHEN the first fine weather arrives in the spring I always find it difficult to throttle down my ambition to fit my strength. Of course, the sensible thing to do is to take it rather easy until the muscles harden up, but haven't you noticed that after three or four days of fine weather it seems to be getting late, while there is so much to do? However, if it is in March, you are likely to have your enthusiasm checked by a sudden spell of wintry weather, as happened this time, and you have opportunity to rest up.

✦ ✦ ✦

I HAVE never been able to understand why so large a part of humanity lacks the impulse to do physical work. Is it a natural feeling, or has our education and the common social attitude towards work developed a feeling that it is not genteel, hence is something to be avoided? At any rate, very many strong, healthy men and women are willing to try anything other than work to make a living. Is the human family on the average naturally lazy? Or is the desire to avoid bone labor the result of a false social idea? Or is it because white-collar jobs bring larger returns?

✦ ✦ ✦

WE ARE planning thoroly to chop up the sod land with a disc before it is plowed. The sod is heavy, having grown two crops of alfalfa and timothy hay, and we feel sure it will make a better seed bed and decay much faster if cut up before it is turned under. A thick, heavy sod when turned down may act as a hindrance to the rise of water by capillarity. If thoroly mixed with the soil it aids in forming a sponge-like condition which is ideal for holding moisture. All our field and garden crops, except asparagus, strawberries, and narrow row stuff, will be planted on this sod.

✦ ✦ ✦

WE ARE still taking a great interest in that promising little fellow referred to in this column last year as "Snookums." It is likely he will get his first lessons in the process of making a first class fruit grower and gardener during the coming season. We have heard aspersions to the effect that grandparents are not capable of properly training grandchildren, but I know better. I received some of my first lessons from my maternal grandfather who lived nearby. I helped him a great deal on the farm when I was three to five years old and I know I was a good hand because I heard him tell grandmother that I was "splendid help." Of course, I heard father say things in after years that did not coincide with what grandfather said, but I know from this experience that the judgment of grandparents is better than others when it comes to judging little folks.—R. P. K.

Work can really be diminished,
Routed, conquered, mastered, finished;
But shirking work is endless,
You are never thru;
And so real, successful shirking
Is harder work than working,
For there are always a million things
To manage not to do.

THE CHEERFUL PLOWMAN

Where Figures Lie

I PLANNED a building for my farm, a simple shack of modest charm. I figured in advance to see just what the cost of it would be. I counted all the common stuff, the lumber plain and in the rough, the shingles and the swinging doors, the window-panes and two-by-fours, the building-paper, shingle nails, the oil and lead,—some seven pails,—the gravel, sand, the spikes, and sills, the weather-boards and other frills.

I figured up the labor, too. I know how much one man should do, so told myself in knowing phrase, "So many men, so many days, so much per day,—that covers all, it covers roof, and floor, and wall; but just to make it Simon pure, and just to make it doubly sure, I'll add two hundred dollars in, get stuff and men and then begin!"

Well, we went at it faith and might, I confident I'd figured right, but soon I found I needed more than I had ever dreamed before. I needed those, and this, and that, a bolt, a hinge, a prop, a slat, an extra joist, more oil and lead, an extra stringer over head, a buttress here, a window there, a thousand extras everywhere!

And labor! Say, it seemed to me, those men would spend eternity in rearing up that little shack. I felt my purse strings pop and crack! My small deposit in the bank cried out for help then gasped and sank. When all was done—it was one day—I laid my figure-pads away. "Those were complete, correct!" I said, "Correct for labor, oil and lead; correct for shingles, nails, and doors, correct for windows, sills, and floors; correct, correct, but here's the joke: the house is built, and I am broke!"—J. Edw. Tufft.

Ward's Catalogue is saving millions of dollars for the American People

THE SEAL OF APPROVAL

No Service to Compare with Ward's

"We have been dealing with you for more than ten years and our dealings have always been satisfactory and pleasant.

"Nowhere can we get such an ironclad guarantee, or such bargains—all first class merchandise. I have been wearing a pair of your guaranteed work shoes for eleven months and they are still good.

"There is no service—mail or home—to compare with Ward's."

Herman J. Dieckman, Sample, Ky.

Best Mail Order House

"I have been ordering goods from Montgomery Ward & Co. for twenty years, and I have found it the best mail order house in the United States.

"Recently I ordered a suit of Stillson Worsted for $17.85 and found the cloth much better than in a suit I would have paid $35 for here.

"I am using a Riverside Cord tire that is the best tire money can buy."

Ira Nelson, Hamilton, Ala.

Five Dollars goes far at Ward's

"My last order was a dress, a pair of shoes and a flashlight, and I still had 81c left out of my $5.

"About twenty-five years ago Charlie Miller of Rockport, bought a shot gun of you for $5. It has had constant use, winter and summer, and no special care, and it shoots today as good as any automatic made. It was low in price and high in quality as all Ward's merchandise is."

Harry Standley, Newton, Ia.

Quick Service on Every Order

"I wish to express my appreciation of the service rendered on my recent order.

"It was mailed the afternoon of February 13 and received on February 15, so I had to wait only three days for my order. It was a small order too, proving that small orders are given just as much consideration as the large ones.

"I saved $3.50 to $4 on the electric iron alone by ordering from you."

A. M. Johnson, Gilmore City, Ia.

Ward's 24 Hour Service Pleases

"I want to thank you for your promptness in sending my incubator. I live six miles from town and three days after I sent my order my incubator was at my door.

"My mother has bought goods from Ward's ever since I can remember, and she, like myself, was always satisfied.

"When you send an order to Ward's you get exactly what you have ordered."

Mrs. Henry Treece, Houstonia, Mo.

Millions of people are saving millions of dollars by using Ward's Catalogue

Are you one of them? Do you turn to this Catalogue for *everything* you need to buy?

Millions of people are today *living better* because their money goes farther at Ward's. Read the letters on this page. Thousands of people write us the same story of larger savings, better goods and better service when they send their orders to Ward's.

"We never sacrifice Quality to make a Low Price"

Ward's saves you money on everything you buy. But we do not offer you price baits on "cheap" unserviceable merchandise. We sell only *reliable* goods—the kind that stands inspection and use. "We never sacrifice quality to make a low price."

You, too, may as well profit by the saving your Ward Catalogue offers. You, too, may as well take advantage of Ward's Catalogue to get *reliable* goods, a larger saving and quicker service. Your patronage is always appreciated at Montgomery Ward & Co. So use your Catalogue. Start sending all your orders to Ward's.

A good deed is never lost, he who sows courtesy, reaps friendship and he who plants kindness, gathers love.—Richard Brooks

Do It Well or Not At All

IN LIGHT of recent occurrences in Harrisburg it would be useless to attempt a prediction as to the amount of money the Legislature set aside for the fight on the Japanese beetle in Pennsylvania during the next two years. If the sum finally appropriated is not sufficient to enforce a strict quarantine during the whole biennium, it is probable that the State Bureau of Plant Industry will maintain a quarantine under the usual regulations as long as the funds hold out. It would be throwing the money away to try to spread a small sum over a two-year period by only half enforcing the regulations. If the action of the Legislature makes necessary this short term quarantine, and if the state or the federal government doesn't meet the emergency when available funds are exhausted, then the Japanese beetle can have things pretty much his own way in Pennsylvania.

A Change in Plans

IT IS to be expected that experience will necessitate many changes in the plans of cooperative organizations as time goes on. In fact, many have already been made. Any kind of business organization which fails to see the need for improvements when they become apparent, or refuses to make necessary changes, is doomed to failure. A California fruit growers' organization has modified its contract by making it possible for a member to withdraw in any year after giving notice at a stated time before withdrawal. Originally, the growers signed a hard and fast contract covering a number of years and no provision for getting out was made. We believe the new method will be much more satisfactory, and at the same time make it easier to get new members.

Apples to England

THE export of apples from the United States and Canada from the beginning of the season to the end of February amounted to 3,833,000 barrels as compared with 4,259,000 barrels the year before. The falling off was due chiefly to the lighter crop in this country and Canada and the consequent higher prices. The combined crop in the two countries last year was about 9,000,000 barrels less than that of the previous year. Europe promises to be a good customer for American-grown apples for years to come, but it must be remembered that apple exports are limited to a comparatively few varieties. This is due to the qualities necessary for successful shipping, and to the established tastes of European people. There is little doubt that the trade could be largely increased if our finest varieties could be carried as successfully as can the tougher skinned kinds. Here is a chance for the shipping interests to make some improvements to their own advantage as well as fruit growers.

Unjust Justice

THE newspapers have been making much of a unique decision recently rendered by Judge Schaeffer, of Berks County, Pennsylvania. However, the papers have not commented upon the effect upon public opinion, nor the effect such a decision will have upon the rights of farmers and other real estate owners. The case, as we understand it, is as follows:

Sheldon W. Funk, a well-known fruit grower of Berks County, was troubled with thieves, stealing fruit from his orchard last year. After employing a detective and securing other evidence a man was arrested and charged with theft, he having taken several bushels of apples from Funk's trees.

The Berks County Court at its recent criminal session decided that only personal property can be stolen and that unpicked apples are attached to the land, and therefore, do not become personal property until they are picked. The prisoner was accordingly released on the larceny charge. He held that the case is covered by a special act of the Legislature, under which the taking of fruit is considered malicious mischief, a misdemeanor, but not larceny.

We can scarcely restrain ourselves in commenting upon the outcome of this case. We would like to see it carried to the highest court and see whether such a decision is in accordance with the law, and if it is, whether the law is constitutional. Here is an opportunity for some real cooperation among fruit growers. The publicity given this case will, no doubt, act as an encouragement to still further aggressions by the lawless element which evidently considers a farm public property and what the farmer raises as food to be had for the taking.

Granting that the interpretation by the Judge is in accordance with the law, we ask him this question: If apples become personal property as soon as picked from the tree, whose are they? To whom did the apples in the above case belong from the time they were picked until the picker reached the public road? If they were then personal property was he not carrying another's personal property over private land, thus making the picker a thief? But if even then it was only mischief, is there not something radically wrong with the law? Are store goods, jewelry, money, etc., a more sacred kind of property than farm produce?

A Good Showing

LEADING dairymen of Pennsylvania made it very clear that they are backing to the limit the program for wiping out bovine tuberculosis when they appeared before the Senate Committee on Appropriations on the first of April. The hearing on the measure providing for an appropriation of three and a quarter million dollars to carry on tuberculosis eradication work during the next two years, brought out scores of farmers from all parts of the state.

Many reasons why a clean-up program should receive the support of the Legislature were presented by representatives of the State Department of Agriculture, the Public Health Service, breeders' organizations, milk distributing companies and women's clubs. But the most important argument for favorable action by the committee was brought out by the county roll call. The many hands that appeared when each of the leading dairy counties was named surely made it clear to Senator Schantz and his fellow committeemen that the men who packed the senate chamber were there for a purpose. Most of the two hundred or more farmers present had come long distances at their own expense to lend their influence to the cause of clean herds and safe milk.

If the unanimity of purpose exhibited on the occasion of this hearing had always been shown when a measure affecting agriculture was under consideration, it isn't likely that important bills favored by farmers would be kicked about in factional fights as they have been during this session.

Herbert Hoover

NEXT to Ex-President Wilson, probably no American was better known the world over during the war than Herbert Hoover. Only one other member of the Harding-Coolidge cabinet has seemingly been as consistently and progressively right in the administration of his office as Herbert Hoover. It is little wonder that President Coolidge relies upon him so fully. Nor is it to be wondered that stones have been thrown at his head many times during his administration of public affairs. It is consistent with human nature that wrong motives and selfish purposes should be charged against him. But in spite of all these, and some of them have originated in agricultural agencies, the principles and policies of Hoover have been proving themselves to be wise and just. We are glad that he is to retain his position in the Cabinet and that the principles applied in the conduct of his department are likely to spread to the Department of Agriculture. On another page we print a circular letter giving his views on agricultural matters.

Farmers and State Taxes

ONE often hears it said that farmers pay no state taxes. That is no longer true, however the case may have been at one time. Farmers who buy gasoline, coal (anthracite), or who leave an estate, pay state taxes. These, in the aggregate, make a great deal of money going into the state treasury in the course of a year. But without counting these taxes it is time to quit ringing in that old saw about the farmer's state taxes whenever the question of increasing the state's revenues is up for consideration. It was a far sighted move on the part of the politicians and manufacturers to put a four mill tax on corporations for state purposes and relieve them of local taxes. This, in the beginning, was for the same purpose that a high protective tariff was instituted — to encourage the development of manufacturing and transportation industries. But time has wrought many changes. The state government is no longer the isolated institution it was fifty years ago, but it has reached out and is intimately connected with many local activities. In other words, the state has become one big community. Because of this, and because the industries no longer need infant coddling, it is time to place equal taxes on every dollar of wealth in the state. But what a howl such a proposition always raises!

Washington Letter

SHOALS COMMISSION APPOINTED.—Another step in the disposal of the Muscle Shoals power-nitrate problem was taken when President Coolidge announced the appointment of a commission consisting of five members to study Muscle Shoals and make recommendations as to the use to be made of the property.

DENMARK MAY RETALIATE.—Should President Coolidge decide upon a higher duty on butter as a result of the findings of the U. S. Tariff Commission, the Danes may retaliate by placing a prohibitive tariff on certain American products, according to reports that come to Washington from Denmark. The commission's findings show that Danish butter can be laid down in New York at a less price than that of the product of middle western creameries.

DENY THEY PLAN TO RAISE PRICE.—The German-French potash syndicate is out with a statement denying that an advance in the price of potash to American consumers is being contemplated by it. The statement says that prices for the American market were definitely fixed last August when the German and French syndicates reached an understanding at a conference in Switzerland. This understanding, which is still in force, was entered into with the purpose of eliminating speculation and price cutting in the American market.

BRITAIN IMPRESSED BY T. B. WORK.—A world's dairy congress in London, England, similar to that held in this country in 1923, is being considered by the British ministries of health and agriculture, according to reports received in Washington. The Britishers who attended our world's congress were especially impressed with the way the United States is handling its tuberculosis eradication work, and there is a strong feeling in the British Isles that a similar work should be undertaken there.

ECONOMY THE WATCHWORD.—The President's economy program is reaching into every department of the government. Consolidation of offices, reduction of clerical forces and the elimination of unnecessary wastes are the means being employed to reduce expenses. Secretary Jardine has reported to Director Lord of the budget, that expenditures of his department for this fiscal year would be $1,322,460 less than the $50,000,000 designated in the department's estimate last fall.

In the years immediately following the war it was customary for heads of bureaus and offices to purchase new furniture and typewriters or take on an extra force in order that there would be nothing to turn back into the treasury. This was done so that they could consistently ask Congress for the same or a larger appropriation the following year. The budget system has been severely, and in some instances justly criticised, but it is undoubtedly effective in cutting down government expenses.

GERMANS TO STUDY AMERICAN METHODS.—An official German agricultural commission is expected to arrive in Washington early in April for an extended study of American agricultural conditions. They will be received by the United States Department of Agriculture and will travel extensively thruout the agricultural districts of this country, noting the progress that has been made in farming methods in recent years.—E. E. Reynolds.

Harrisburg Letter

MONEY FOR CATTLE.—Indications multiply that the powers ruling the legislature will vote more money for indemnifying owners of cattle slaughtered to prevent spread of tuberculosis than intended a month ago. Political differences in the general assembly have scrapped plans and instead of ignoring some of the propositions earnestly advocated there is a disposition to go strong and if there is any cutting to be done to allow Governor Pinchot to do it.

SCHOOL POLICY STAYS.—One result of the squabbling over appropriations has been to assure the maintenance of the policy of support for the school system and the full amount of money required to meet all obligations under recent laws is assured. Payments the last year have been at such a satisfactory rate any change would have worked political disaster. Unfortunately, laws designed to give more for purely rural districts did not get favor. The report of the committee in charge of the educational survey came too late for its recommendations on necessity of more substantial financial assistance to be carried thru.

FORESTRY VOTE IN 1928.—Prospects are the vote on the forestry bond issue of $25,000,000, which was generally favored by rural elements, may not be taken before 1928. There are questions at the State Capitol whether under supreme court decisions the proposition can be voted upon this year. In any event steps are being taken to obtain court ruling. The vote to submit the forestry issue was large in spite of the fight made against it. However, the feeling over multiplication of bond issues, which has gone beyond any one's expectations, may result in others being put into the attic.

TRY-OUT ON BAKING.—An unusual test of Pennsylvania wheat flour is to be made at various state hospitals as a result of a campaign for more use of flour milled from Keystone State grain. Mixtures have been worked out and the state hospital authorities will make a series of tests this month. Half of the flour will be from spring wheat and half from certain Pennsylvania varieties.—Hamilton, Harrisburg.

New Jersey Letter

CANNERS SEEK LOCATION.—With the opportunity for New Jersey to become a more important canhouse state, canners are seeking new locations in commercial truck areas for the putting up of new plants. The southern part of New Jersey is fairly well covered and consideration of such central New Jersey points as Freehold is being made. Asparagus growers, because of their heavy acreage, are not optimistic on the sale of the crop during the next few years, and some of the growers desire the establishment of a canhouse service on asparagus.

GASOLINE TAX VETOED.—Efforts to secure a gasoline tax in New Jersey, approved in principle by the farm organizations but not introduced by them in the state legislature, were not resultful in the 1925 session of the Legislature, now adjourned. Three measures to this end were introduced: One would have placed a tax of two cents per gallon on gas; another bill provided for the distribution of the tax; while a third measure reduced the present license fees accordingly. All three measures went thru both branches of the Legislature but were vetoed by the Governor. Due to an irregularity in the bill providing for a change in the license fees, the assembly killed the three measures when they were reintroduced for consideration after the Governor's veto.

GROWERS AND NURSERYMEN MEET.—At the call of the New Jersey Federation of County Boards of Agriculture, fruit growers and nurserymen, meeting at Trenton, have appointed a committee of three fruit growers, three nurserymen, two representatives of the Farm Bureau, and three consulting horticultural experts from the College and Experiment Station, to consider a plan for better business practices in the sale of nursery stock. Losses reported by fruit growers from trees which had not come true to name have awakened the growers to a realization that an established code of practice appears to be necessary. The conference and working committee comes as an outgrowth of the efforts of the farm interests this year to secure a new law which would accomplish the same results. After a measure was introduced, it appeared that a conference of both fruit growers and nurserymen might secure the same end and the fruit tree bill was dropped.—B.

New York Letter

LEGISLATIVE ACHIEVEMENTS. The most far reaching legislation of the session just adjourned is the bill to give $9,000,000 additional state aid to city and rural schools. While this is but a small fraction of that asked for last year for rural schools alone it is a big step towards giving rural children better educational opportunities, as it gives the poorest district the most aid and helps in cost of transportation of pupils who wish to go to high school. About $30,000,000 was appropriated for highways and 2500 miles of new road authorized.

FARM PRICES. — Farmers who wintered cabbage and potatoes are now feeding them to stock as the price is too low to haul to market. Milk prices still hold to the March level, and a smaller than usual milk surplus is expected. The competition of milk offered by independent cooperatives is responsible for a lower price than would have been possible otherwise, it being offered as low as fifty cents a can on the open market by these destructive price-cutting forces. Eggs are selling at 28@32c. Hay is variously quoted up state at considerably less than the $26 per ton of the big markets.—M. G. F.

County News and Comment

Allegheny County, Pa.—Have been enjoying delightful spring weather. Today we are having a heavy rain, which is needed. Fall grain looking better than the average for March. Pastures and meadows show signs of promise also. Buds on fruit trees well advanced. Farmers here have taken advantage of the good weather and much plowing has been done. A few gardens partly planted also. Livestock in general has wintered well. Plenty of rough feed still on farms.—C. K., March 25.

Blair County, Pa.—We have been having very changeable weather this spring but spring work is progressing rapidly. Much plowing is done and some clover seed sown. Not as many farm sales this spring as usual, but livestock and machinery are selling for fair prices. The wheat on limestone ground does not look very good at present as it has been exposed to the cold too much. In places the roots are frozen as well as the tops. The recent rains have made the grass start nicely and the buds are swelling on the trees. Prices, wheat, $1.57; apples, $2; eggs, 30c; chickens, live, 35c; dressed 42c; hay $15@25.—H. E. H., March 30.

Bradford County, Pa.—The ground is now covered with snow. Not much hauling being done. There is still a large amount of hay unmarketed. Much of it will probably be held over this season. Wheat on the hills is looking poor. Hatching season is now in full swing. The fertility averages higher this year, probably due to the mild weather. The prospects for a good maple syrup year were poor in the early season, but the run has been fair in spite of the poor start. Syrup is selling at $2.00 per gal. Practically no sugar being made.—G. E. E., March 28.

Broome County, N. Y.—We have been treated to a variety of weather lately. The earthquake was felt very little. We had blinding lightning and loud thunder during a heavy rain storm. Weather warm enough for July with the roads dusty in places has been followed by three days of snow. Work on new roads has begun. A few farmers are plowing. The maple syrup crop has been disappointingly small. Butter, 48c at the store, and eggs 25@28. Potatoes sell slowly for 75c. Dealers are paying 9c for live calves. Cows at auction are bringing very good prices.—E. M. C., March 30.

Carroll County, Md.—Spring sales are being held now in full force. At most of the sales good prices were obtained for the machinery and livestock. During the early part of the month farmers were [illegible] ing fence, cleaning headrows, and pruning fruit trees. In lower part of the county butter bean poles were cut and wormseed beds put in order. More wormseed is raised in Carroll County than any place in the United States. The past week the soil was dry enough to work. Peach and plum buds are swelling. Wheat and barley are in fair condition and improving. Grass is green and came thru the winter in good condition. Dirt roads have dried off, improving travel. Prices: wheat, $1.65; corn, [illegible]; eggs [illegible].—H. I. B., March 30.

Mercer County, N.J.—In the eastern end of the county much land is plowed and

A GRO-MOR JR. Cultivator Will Pay for Itself in 30 Days

It is the greatest labor-saving tool ever used by the vegetable grower and while not a plaything, an average 14-year-old boy will do 3 to 6 times as much work as a man with a double-wheel push-plow, and do it better.

Will cultivate smaller plants and closer to the row than a push-plow and eliminate 50% of the hand weeding.

With it you get deep, level, perfect cultivation, stimulating plant growth and conserving moisture. It will do much better work than the push-plow when the soil is hard and crusted.

The **GRO-MOR JR.** *solves the labor problem*

The Gro-Mor Jr. will seed 3 times as fast as the single seeder and do a better job.

Mr. C. Born, Mgr. Riverdale Market Gardens, West Springfield, Mass., writes:

"After using the Gro-Mor Jr. for the past season will say that it will save in seeding 75% of the work, and in cultivating 50%, and that we are more pleased with the work that it has done, so well in fact that we have added two more outfits to our equipment."

With a 15-inch clearance the Gro-Mor Jr. can be used at all stages of growth and with 12-inch centers will work perfectly, rows planted 12 inches apart and 10-inch rows can be worked until plants near maturity.

The Gro-Mor Jr. is strongly built, of the best of materials, by experienced mechanics, weighs 190 lbs., and will give long and economical service. It is driven by a four-cycle engine, air cooled, with multiple disc control.

Any of the Planet Jr. hand machine tools can be attached to the Gro-Mor Jr.

The price of the Gro-Mor Jr. places it within the reach of every grower. Write today for full particulars, without any obligation on your part. We can make quick deliveries and probably have a distributor or dealer near you.

Motor Cultivators—Should Corn Be Started Indoors?

THOSE who are planning to use motor cultivators for the first time this spring will need to plan the spacing of their rows to accommodate the size of the machine. If the machine is fourteen inches between the centers of the wheels, in a two-wheel machine, the closely planted rows, of spinach, beets, carrots, etc., ought to be about fourteen inches apart, rather than twelve inches. The latter spacing may be all right for the crop, but not right for the most economical use of the cultivator.

When these crops begin to grow out into the row it is troublesome to find that the tractor wheels do not run exactly in the middle, but to one side. If they run even an inch to one side, one may lose as much as a week of tractor cultivating when the crops are nearly mature.

Necessary to Plan Spacing

If a man expects to work a small field of corn or tomatoes with a small garden tractor, he needs to plan the spacing for the tractor just as if he were planting radishes, spinach, and other small crops. The first thing to do is to determine the greatest width the tractor will cultivate on one trip, and do the work well. The widely spaced crops, then, may be planted a little farther apart than this greatest width, or at any greater width that can be well covered in two or three trips with the machine.

The single-wheel machines may allow somewhat closer planting, tho not so much so as one would think, judging by the actual width of the wheel and cultivating equipment. With these machines there are two rows to watch instead of one, as in the case of the two-wheel tractors, and ample room is needed to prevent injury to crops. Always we have to remember that a planting distance that is all right when the plants are small may be all wrong when they have grown to nearly full size.

Will it pay to start sweet corn indoors, in dirt bands or pots, to get the early prices? I think it is a very risky thing to do except as an experiment, if indoor space is given a dollars and cents value. Corn can be so grown, but in some seasons it bears ears no earlier than that which is planted in the open ground.

Last spring we had corn in dirt bands on a small scale, and the plants were ten days earlier than those grown from seed planted outside. However, the cold spring was against early planted sweet corn in the field, and less unfavorable to corn started indoors.

Many "Ifs" to Consider

Sweet corn, with respect to transplanting, is somewhat like melons and cucumbers. If you move it at just the right stage, not too young nor too old, and growing conditions in the field are good when you set it out, it will go along without delay. Corn quickly outgrows the pots or bands, however. The long roots run out thru the holes in the bottom or make a mat on the sides, if the plants cannot be moved to the field at the appointed time. Then the transplanting process sets them back and sometimes they make ears when too small, the ears, too, being small.

In the home garden, and for limited commercial use when competition with warm soils and climates is not severe, transplanting sweet corn is worth trying.—W. C. P.

What Shall We Do?

WE HAVE a swarm of bees which we caught last summer. They have lived thru the winter and now we do not know what we should do with them. They made comb and honey in the upper part of the hive instead of the lower, last summer. Will some of your readers tell me just how I should take care of them?—Mrs. E. M. C., Broome County.

Our Stew Kettle Hotbed

THE man of the house and lady visited with a neighbor one afternoon last fall. She, the neighbor, was most busy making last-minute preparations for the winter storing of a lot of fine sweet potatoes; dry cleaning of all soil, wrapping for safe storage.

When departing, she gave them some; they were a new kind, particularly desirable for cooking. But these were not cooked! They decided to keep and grow them. Without any previous personal experience or knowledge of hot bed work—and since but two remained in good condition at planting time—a stew kettle hotbed was devised.

Leaky Vessel Drains Well

A porcelain vessel soon had more than one leak. Bits of charcoal, pebbles, etc., lined its bottom, for drainage. It was filled with fine sand, mixed with garden soil. Carefully the two potatoes were interred therein. The kettle was perched upon a kitchen shelf just back of the stove. Left undisturbed save for occasional, spare waterings, in due season they sprouted nicely, sending up strong, green growth every day. The portable hotbed was then transferred outdoors. The days and nights were warm now; they soon made as fine, strong plants as ever grew.

A crop of delicious beauties when digging time came 'round.

The "Ridge" in the Garden

A "ridge" was prepared in the garden; with holes ready. The first twenty-five thrifty sprouts were cleanly clipped with a sharp knife, a bit below the surface. These were immediately placed into the waiting holes and the soil packed about them late one evening just before a rain.

Ready for transplanting outdoors.

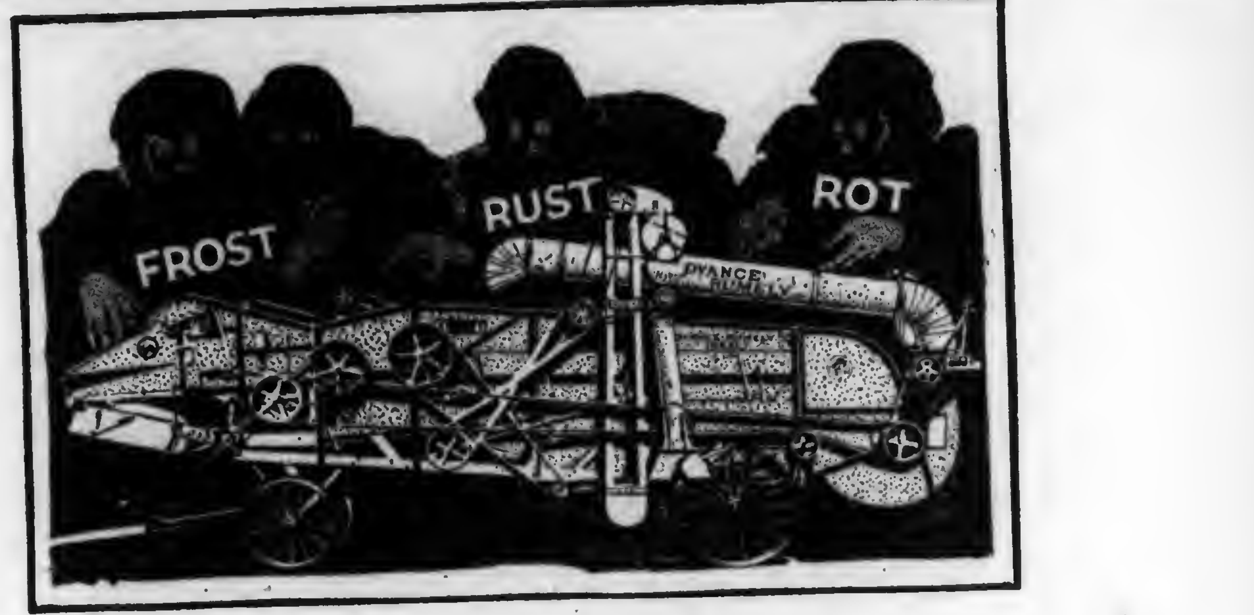
The potatoes gave additional sprouts from time to time, until the whole row of sixty-five plants was finished. The tubers, then so weakened, the remnant was cast aside. Rather irregular slippings, plantings and maturing of potatoes; but the big basket of smooth, delicious beauties obtained at digging time revealed ne'er a word of this, but whispered, rather, "Who hath despised the day of small things?"—G. S.

Study Potato Storage

LAST fall a meeting was called at Coudersport by the State Department of Agriculture to consider the relation of potato storage to seed certification. At that time a committee was appointed to act in an advisory capacity for the studies being conducted in the potato storage at Coudersport and for the potato research carried on at the Laboratory at Canton, Pennsylvania. On this committee are representatives of the growers, the United States Department of Agriculture, the State Department of Agriculture and the Pennsylvania State College.

Thruout the winter an elaborate series of ventilation experiments has been carried on at Canton and valuable information gathered on the causes of sweating, sprouting, shriveling and the development of rots and molds. To give an opportunity to any who are interested in this work to study the methods and results, the committee has set aside Friday, May 1, for a general meeting of the Marble Laboratory at Canton. This is the week that the storage bins are to be taken down and the work can be studied best at that time. All interested in potato storage and seed certification are invited. S. W. F.

A good way to insure a profitable garden this year is to clean away and burn all crop remnants of the preceding year. This will not only decrease the chances of loss from plant disease but will also destroy a number of hibernating insects which may prove harmful to the growing crop later on.



Defies the Elements!

RUMELY IDEAL
Steel Separator
GALVANIZED!

The man who "threshes his own" makes the most money from his crops. He threshes when his crop is ready—when weather is right—when prices are right.

Rumely Ideal Steel Separators are built in ideal sizes for individual farms—for use with small tractors. Have all the famous features of the incomparable Rumely Ideal wood separators, with the addition of *steel construction*. Have no rival in speed, capacity and clean separating. Get all the grain—an important point whether prices are high or low.

Last for Years and Years

In addition Rumely Ideal Separators are the cheapest to own and operate. Galvanized steel, pressed steel, angle iron and other metals form the greater part of the bridge-like construction. They "save all your grain" this year and for years to come.

See these Rumely Ideals in *steel* at the nearest Rumely dealer's place. Or mail coupon at once for our complete catalog. Address Dept. A-Y.

A. J. TOWER CO., BOSTON.

More than 400,000,000 pounds of cull apples last year

Most of these culls were caused by aphis. These insects are very destructive. They not only stunt and deform the fruit, but also retard tree growth and help spread scab and blight.

Damage by aphis can be prevented by spraying with Hall's Nicotine Sulphate. It contains 40% pure Nicotine—the deadliest aphis poison known.

Being a vegetable extract, it does not harm blossom, fruit or foliage; but it does kill aphis every time.

A ten-pound tin makes 800 to 1100 gallons of spray. The cost is less than 2c a gallon. Buy from your dealer. If he cannot supply you, send us your order along with his name.

NOTE—Hall's Nicotine Sulphate is also deadly effective against red bugs, leaf hoppers, thrips, psylla and many similar insects.

It mixes easily with Arsenate of Lead, Lime Sulphur and any other standard insecticides.

Melons Started under Glass

Experiments in Jersey of Value to All Growers

STARTING muskmelon plants under glass is not a new idea, but it has never been adopted on a commercial scale in some of our important truck-growing regions. Are we to infer from this that it doesn't pay? But other truck crops are started this way tomatoes, sweet potatoes, cabbage—why not muskmelons? The answer lies in the sensitiveness of the roots of this plant to moving. A slight disturbance of the delicate root-hairs in transplanting may so set the plants back that they will never recover, or at least the growth will be badly checked. But if transplanting can be done without disturbing the roots, why would it not be a paying practice? This is exactly what the New Jersey Agricultural Experiment Station has set about to find out. After three years' trials, they are ready to recommend the practice to the commercial growers of the Garden State. And what will work in New Jersey no doubt will work in other states where the conditions are similar.

"The difference between the transplanted plants and those developed from seed planted directly in the field is striking," says Prof. L. G. Schermerhorn, head of the department of vegetable growing. "If transplanted plants are well grown and handled, the vines will meet across the rows before the plants from field sown seed have scarcely started to 'run.' The first pickings of ripe melons of the Early Knight variety were made from transplanted plants at New Brunswick on August 3, in both 1922 and 1923, whereas the plants from field-sown seed failed to mature any melons until August 17 in 1922 and August 18 in 1923. In 1924 the first pickings of ripe fruit were made August 14 from the transplanted plants and not until August 30 from the field-sown seed. This is a gain in maturity of two full weeks.

Still Other Advantages

"Earliness, however, did not prove to be the only advantage gained from transplanted plants. They also produced an increase in the average yield of sixty-four 5-8 bushel baskets of firsts per acre, or about 750 melons. The field-planted seed averaged 158 baskets of firsts per acre, and the plants started under glass in veneer bands, 283 baskets of firsts over a period of three years. This result may possibly be explained by the fact that the transplanted plants became vigorous and well established during the favorable growing weather of early summer and before the attacks of melon blight became serious."

The seed is planted in hotbed, coldframe or greenhouse three or four weeks before field-planting time. In regions having the same climate as central New Jersey, this would be about the middle of April, the plants being set in the field about May 10 or 15. Too early planting should be avoided, so the plants will not become crowded and soft before the time of field setting.

Wooden Bands Best for Soil Blocks

In order that the roots may not be disturbed in transplanting, the seed is planted in individual soil blocks surrounded by bands about four by four by three inches. Both paper and wooden veneer bands were used in the tests, but the latter were found to be the more satisfactory. The paper bands are harder to keep in shape while filling with soil, and more apt to rot away before transplanting time.

The bands are placed side by side in the hotbed or coldframe, or on the

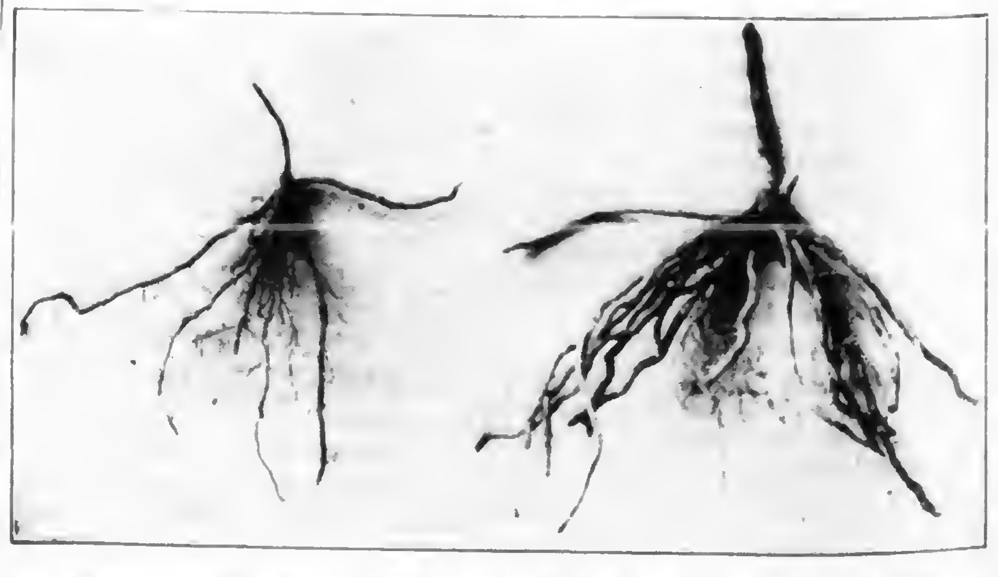
(Continued on next page)

Asparagus Needs Deep Soil

A MAN told me the other day that he had planted his asparagus roots a foot deep and that he could run over them with a disc without hurting them. That is not hard to believe, since he was lucky enough to have bottom land, which he could work up to that depth without exposing any subsoil. Another man, with six-inch soil, complains because his crowns are too near the surface after only four years in the field. That is not hard to believe, either.

The first man has ideal asparagus land, and the life of his planting may easily run to twenty years. The other has buckwheat land that should never have borne asparagus at all. The first could plant his crowns two feet or more apart and yet use all the soil to advantage, while the second man will have to give up his patch so early that crowns set eighteen inches apart will not fill the rows.

If a man simply has to have asparagus and his land is shallow, either let him deepen it in some way or plant the crowns fifteen inches or less in the rows, then feed them very heavily. I believe by doing this he will get the greatest cash returns in the few years before the crowns get so close to the top that the land cannot be kept clean.—W. C. P.



Twin asparagus crowns—one a runt, the other promising a good crop.

Melons under Glass

(Continued from page 10)

greenhouse bench, and a thin layer of compost put in the bottom. They are then filled level full with a good garden soil that will remain loose. The soil is firmed slightly, and six or eight seeds planted in each hill.

After the seed is sown, the plantings will need to be kept watered, weeded and properly ventilated. Until the seeds sprout, the temperature during the day should be kept as near 70 to 75 degrees as possible. After that the day temperature should be kept at 60 to 65 degrees, and the night temperature at 60 degrees, until about a week before transplanting time. The plants should then be "hardened off" by gradually giving them more air.

The Thinning Process

When the center bud begins to show in the young plants, they may be thinned to three plants per band.

Plants ready to be set out.

Later when the grower is certain of a good stand he may thin to two plants for field setting. However, if he prefers, he may leave the three plants intact until after transplanting to the field. If this is done, the third plant should be removed with a knife, as pulling is likely to disturb the roots of the other plants.

The extra labor and expense involved in this method of planting are small in proportion to the advantage gained. The early market is usually the best market, and the grower who can "make hay" during that golden fortnight before the run of the crop begin to arrive has little to fear from the glut that may come later.

The principles of the method are simple: Get the plants growing early and keep their growth going uninterruptedly right up to maturity. Above all, DON'T DISTURB THE ROOTS.—Carl R. Woodward.

Competition Is Valuable

AGAIN Eastern growers have learned a lesson from Western competition. Listen to this, from Crops and Markets:

"In 1924 the New York lettuce area decreased by 700 acres and the end of the industry was predicted. However, the crop turned out to be nearly as heavy as that of 1923. With severe competition from the West, growers were able to sell only best-quality stock.

"Prices, in general, responded so well that those growers who marketed a quality product in 1924 made more profit than they had realized in any previous season. . . . Well-informed local authorities believe that the future of the Eastern lettuce industry depends on better marketing methods."

McCormick-Deering Corn Planters
CHECK ROW · DRILL · HILL DROP DRILL

When you plant your corn you plan for the greatest possible yield. To get this you must use every available foot of land. You must *grow a full hill everywhere a hill is supposed to grow.* If your corn planter has passed its most useful days, you cannot do this. Missed hills can easily cost you several hundred bushels each year.

Right now the McCormick-Deering dealer in your community is ready to show you new, dependable McCormick-Deering Planters that will help you avoid losses from missed hills. Features: variable drop; edge, flat, or full hill drop plates; automatic markers, power hill drop; all standard widths; fertilizer attachments; and pea and bean attachments. One of these planters can easily pay for itself this year out of the money it saves.

McCormick - Deering Cultivators
STYLES AND EQUIPMENT FOR EVERY KIND OF ROW CROP

Never before has the value of the two-row cultivator been so evident. This year every short cut must be used, yet the farming job must be done better than ever. You can do this with a two-row cultivator. If you wish, you can go over the corn an extra time or two, yet your labor cost will be considerably less than your usual cultivation with a one-row cultivator. In fact, the points in favor of two-row cultivation are so numerous that you will surely wish to talk to your local McCormick-Deering dealer about the light-running, easy-to-handle McCormick-Deering two-row cultivators. Ask him also about McCormick-Deering one-row corn cultivator. Let the tools in the McCormick-Deering line help you.

Klutch holds False Teeth tight

Klutch forms an adhesive cushion between the plate and gums; holds the plate so snug that it can't rock, can't drop, can't chafe, can't be "played with" and not a seed can get under it. You can eat, talk, laugh or sing *just as well as you ever did with your natural teeth.* A box of Klutch is three months of joy. Postpaid 60cts; 2 boxes $1.00. (Send $1 bill at our risk). Use a whole box. If not *more* than satisfied, *all* your money back.

HART & CO., Box 5025 Elmira, N.Y.

White Diarrhea

Remarkable Experience of Mrs. C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doubt be of utmost interest to poultry raisers who have had serious losses from White Diarrhea. We will let Mrs. Bradshaw tell of her experience in her own words:

"Gentlemen: I see reports of so many losing their little chicks with White Diarrhea, so thought I would tell my experience. I used to lose a great many from this cause, tried many remedies and was about discouraged. As a last resort I sent to the **Walker Remedy Co., Dept. 517, Waterloo, Iowa**, for their Walko White Diarrhea Remedy. I used two 50c packages, raised 300 White Wyandottes and never lost one or had one sick after giving the medicine and my chickens are larger and healthier than ever before. I have found this company thoroughly reliable and always get the remedy by return mail.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by the Bacillus Bacterium Pullorum. This germ is transmitted to the baby chick through the yolk of the newly hatched egg. Readers are warned to beware of White Diarrhea. Don't wait until it kills half your chicks. Take the "stitch in time that saves nine." Remember, there is scarcely a hatch without some infected chicks. Don't let these few infect your entire flock. Prevent it. Give Walko in all drinking water for the first two weeks and you won't lose one chick where you lost hundreds before. These letters prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, Ind., writes: "I have lost my share of chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I never lost a single chick from White Diarrhea. Walko not only prevents White Diarrhea, but it gives the chicks strength and vigor; they develop quicker and feather earlier."

Never Lost One After First Dose

Mrs. Ethel Rhoades, Shenandoah, Iowa, writes: "My first incubator chicks, when but a few days old, began to die by the dozens with White Diarrhea. I tried different remedies and was about discouraged with the chicken business. Finally, I sent to the **Walker Remedy Co., Waterloo, Iowa**, for a box of their Walko White Diarrhea Remedy. It's just the only thing for this terrible disease. We raised 700 thrifty, healthy chicks and never lost a single chick after the first dose."

You Run No Risk

We will send WALKO White Diarrhea Remedy entirely at our risk—postage prepaid—so you can see for yourself what a wonder-working remedy it is for White Diarrhea in baby chicks. So you can prove—as thousands have proven—that it will stop your losses and double, treble, even quadruple your profits. Send 50c for package of Walko—give it in all drinking water for the first two weeks and watch results. You'll find you won't lose one chick where you lost hundreds before. It's a positive fact. The Leavitt & Johnson National Bank, the oldest and strongest bank in Waterloo, Iowa, stands back of our guarantee. You run no risk. If you don't find it the greatest little chick saver you ever used, your money will be promptly refunded.

WALKER REMEDY CO., Dept. 517,
Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 economical large size) package of Walko White Diarrhea Remedy to try at your risk. Send it on your positive guarantee to promptly refund my money if not satisfied in every way. I am enclosing 50c (or $1.00). (P. O. money order, check or currency acceptable.)

POULTRY

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

Rations for Baby Chicks

Please advise what other ingredients you would add to wheat flour and corn meal, equal parts by weight, to make a balanced growing ration for young chickens.—D. R. C., Allegheny County, Pa.

The Cornell chick mash mixture consists of 25 lbs. yellow corn meal, 20 lbs. wheat bran, 20 lbs. flour wheat middlings, 10 lbs. fine ground heavy oats, 10 lbs. fine ground meat scrap (50-55 per cent protein), 5 lbs. bone meal, 10 lbs. dried milk products (use part buttermilk) and ½ lb. salt.

Pennsylvania Farmer for March 21 contains a very useful chick feeding article by L. W. Steelman which I think it would pay readers to clip out and file where it can be used for ready reference.

A simple mash mixture for chicks used by the Wisconsin Station consists of 80 parts yellow corn meal and 20 parts standard middlings plus 5 parts ground bone, 5 parts pure limestone and 1 part salt. This is fed dry and no scratch feed is used. The chicks are given all the sour milk they can drink and housed where the direct rays of the sun will strike them.—R. G. K.

Blood Clots in Eggs

I have had several eggs with the white all bloody and looking like water. I would like to know what causes it and if I can find out which hen lays such eggs.—J. A. A., Elk County, Pa.

Blood clots in the eggs are caused by ruptured blood vessels when the yolk of the egg passes into the oviduct. Bloody eggs are caused by injuries to the wall of the oviduct which allow blood to enter the albumen. A hen which produces bloody eggs can easily be located by the trapnest and such a bird should be removed from the flock. Blood clots in the eggs are more common and such eggs can be removed by candling.—R. G. K.

Turkey Has Small Tumor

My turkey seems to have a swelling on the lower eyelid, nowhere else on the head. He eats well and runs around everywhere. Would it be dangerous to breed with him on account of young stock? Had a veterinarian examine it; he says it is sort of a tumor and would not hurt any, only spoils turkey's appearance.—J. E. K., Dauphin County, Pa.

The small tumor will probably not harm the turkey as a breeder if he is otherwise in good condition. When you have had a veterinarian examine a bird, his opinion is apt to be all right as he has a better opportunity for correct diagnosis than the long distance adviser.—R. G. K.

Dominique Replaced

What is your opinion of the Dominique breed of chickens as layers and all purpose birds, and how do they compare with Leghorns? Do they lay a white egg?—H. Z. S., York County, Pa.

The Dominique breed has been almost entirely replaced by the Barred Plymouth Rock. The Barred Rock has been developed until it is superior to the Dominique in appearance as well as in egg or meat production. I do not know of a breeder who is trapnesting the Dominique and trying to develop a heavy laying strain of that breed. The Dominique and the White Leghorn can hardly be compared as they are birds of a different class.

If you are choosing a new breed and wish birds like the Dominiques you will have better success in obtaining an egg laying strain of Barred Rocks. Between the Rocks and Leghorns the choice is somewhat a matter of personal preference. The White Leghorns are most generally used on commercial egg farms while the heavier breeds are often more popular with small flock owners on farms who wish a combination of egg and meat production and do considerable hatching and brooding with hens.—R. G. K.

Hens May Be Too Fat

Would you please tell me why my hens are not laying? I have about 100 hens, sixty Tom Barron White Leghorns, and forty mixed breed. They were hatched out May and June of 1924. After molting they commenced to lay January, 1925. I received about an average of sixteen eggs per day during that month, then they fell down gradually to one and two, which is the most I am getting now. As all my neighbors are getting from sixty to seventy eggs per day from flocks the same size, I am discouraged.

Here is their menu, which I have maintained: morning, three quarts whole corn; ten A. M., five quarts bran with poultry regulator, feed hot but not sloppy, just moist; one P. M., three quarts of the balanced dry mash and during day vegetable scraps from table, potato parings, etc.; six P. M., three quarts corn.

They eat well and look fine, all but their combs, which look harsh and dry with small dark spots. The droppings are as should be. The hen houses are as clean as possible, plenty of clean hay to scratch in, nests clean, and a big tankful of ashes for them to dust in. I have found no lice on them. Their coops are light and dry and they have plenty of grit and fresh water.—E. B., Wayne County, Pa.

I think the lack of a dry mash before the hens at all times has prevented them from eating enough protein to insure profitable winter egg production. Try the simple home mash of equal parts ground oats, ground corn, middlings, bran and meat scrap and improvement in egg production will probably result.

Should Make Good Breeders

When hens receive yellow corn and plenty of vegetable scraps and bran during the winter they usually keep in good condition physically altho egg production is low and some of the hens may become overfat from eating too much corn.

Your trouble is apt to result from partial molts, overfat hens and lack of protein and this condition can now be remedied easily by furnishing the protein and turning the hens out on range where spring conditions will stimulate egg production. These birds which have not produced many winter eggs should now lay eggs which will produce strong vigorous chicks.—R. G. K.

Just being kind to some one is exercising the most powerful element in life.

White Diarrhea in Baby Chicks
How to stop it in 48 hours
A letter from Ella Orr, of Van Alstyne, Texas, contains good news for poultry raisers who are losing baby chicks. She says:
"I think Avicol is the finest thing for baby chicks I have ever tried. I don't think, I can raise chickens without it. I used it last year and never lost a chick. Every year, except last year, all my chicks would die when about two weeks old. I highly recommend Avicol for White Diarrhea."
There's no doubt that Avicol is wonderful both for preventing and stopping disease in baby chicks. It has a specific action as a bowel antiseptic and regulator. Usually within 48 hours, the sick, droopy chicks are lively as crickets. A liberal supply of these tablets can be obtained by sending fifty cents to The Burrell-Dugger Co., 550 Allan St., Indianapolis, Ind. As Avicol is positively guaranteed to do the work or money refunded it costs nothing to try. Readers will be auprised at the way chicks grow and develop, in vigorous health, when these tablets are used in the drinking water.

ved the Expensive Eggs

T OUR economics club meeting last week, the following sur- ing "egg story" was told by our demonstration agent.

"A young friend of mine had been tly married and taken up her e on her husband's farm. She little of the mysteries of eggs hatching, setting hens, etc.

The two settings of very expen- eggs ordered by Farmer Hus- arrived duly. Alas, two of these en eggs were cracked! Mrs. lywed consulting no one, care- y pasted adhesive tape over the s. All the eggs hatched but The crux of this story is that patched egg yielded a fine chick, ch grew, waxed fat and flourish-

This is a true story.—Marylander.

Ideas Worth Trying

E WERE speaking of that harrowing cannibal eating among ens. Said one poultryman to her: "When I find a chick being ed by other chicks and sharp are torturing it, I pick it up, if it is not terribly injured, I tar (the kind you use on roof-) over the injured parts and re- it to the pen. Meat meal or meal is then put in pans on floor that the chick may eat its " This treatment applies to hens well.

Last week one of my neighbors ed me her 300 lively Leghorn ks. They were in a house which e adequate floor room and in each the four corners sand was piled, only in the corner, but sloping the wall directly above it for at st two feet. This sand saves the eadful crowding of the chicks that ten causes trouble.—Marylander.

Incubator Operation

THE incubator should be placed in a ventilated room. After rting your stove or lamp let up or lease your regulator until the mperature goes up to 102½ degrees. emember, the temperature cannot e when the disc over the lamp is ised. When your temperature aches 102½ degrees the disc over e lamp should raise one-eighth of n inch, or so it just clears. Now n the machine for eighteen hours en you have the temperature just ht before putting in the eggs.

As soon as you have placed the in the incubator the temperature will drop. Allow your incuba- or eighteen or twenty-four hours to et back to 102½ degrees.

Start turning eggs the second day. turn the trays from end to end d change from side to side, con- nuing this process night and morn- g until the end of the eighteenth y, after which you cease turning he eggs but continue turning trays, ways handling them very carefully til you see the first picked egg.

Not Over 103 Degrees

After the seventeenth day of the tching period animal heat causes rise in temperature and the regu- ting nut should be turned at inter- ls so as not to allow the temper- re to rise over 103 degrees. Start ring your eggs on the seventh day, llowing them to cool long enough to e easily detected with the top of ur hand. However, give plenty of ir in hot weather. Test your white shelled eggs on the fifth day and brown shelled on the seventh day and remove all clear eggs and dead germs.

Under no circumstances open your incubator after you see the first picked egg until your hatch is complete, the morning of the twenty-first day for Leghorns and at the end of the twenty-first day for all large breeds. Leave the chicks in the incubator eighteen hours after all are hatched.
—G. G. Grubb.

DICK'S Blizzard Ensilage Cutter

Biggest value in ensilage cutters

Dick's Blizzard Ensilage Cutters give farmers the most for the money, in quality and results. Model for model they do the most work per H.P., safest to operate, cost less for repairs and upkeep, last the longest.

Complete Satisfaction Using Fordson Power

There are two Blizzard models that do wonderful work using Fordson or other light tractor power. Both have Paddle Roll, Self-Feed, and are moderate priced. Model R-211 gives capacity of 6 to 9 tons, and R-133, 8 to 12 tons per hour. Both machines do fine, even cutting and easily elevate to top of highest silos.

Write for Catalog

Describes the five other Blizzard models ranging in capacity from 4 to 35 tons per hour and operating on 8½ to 18 H. P. Also describes "Famous" Feed Cutters for hand or power operation. Thousands of poultry men are using them.

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry
Pennsylvania State College

Topsy Makes the Most of a College Education

MR. RUSSEL B. ACE, a Wyoming County boy in attendance at the Pennsylvania State College has just completed an unusually high seven-day record with his cow, Topsy Clothilde Keyes 594773. It should be added that she is also attending State College and appears to profit by a college education for in one week under the care and feeding of her owner she produced 651.4 pounds of milk and 25.075 pounds of butter.

Back of this fine record lies an interesting story. When John J. Jaquish, county agricultural agent of Wyoming County, organized a calf club in the vicinity of Tunkhannock a few years ago, one of the boys who took an active interest in the club was Russel B. Ace, a son of Mr. Charles Ace, who is one of the progressive farmers in the community. It was not difficult for Russel to persuade his father to sell him a promising purebred Holstein calf.

Topsy Clothilde Keyes who is making and breaking records.

Received the Best of Care

This calf received the best of care, was fed regularly and the boy omitted nothing that would bring it along in good thrifty condition. A fine well-grown cow was the result.

About this time Mr. Ace, Sr., who had gradually built up a herd of thirty-five head of purebred Holsteins, became interested in securing some Advanced Registry records on some of his cows. Several of them had made unusually high records in the cow testing association, and it appeared to him that if they were given an opportunity they would make still higher records under special care and attention. The county agent and Professor Borland, head of the Dairy Department at State College, visited the herd to make selection of the best looking possibility for the test. The cow that had been a club calf was at once selected.

Four Years Not Long Enough

The plan of sending his cow to State College met with the son's approval for he was at that time thinking of going to State College for the two-year course in Agriculture. Consequently the cow came in the summer and he followed in the fall. However, when once at college he realized that a four-year course gave none too much education and arranged to change over to the longer course. Meanwhile Topsy Clothilde Keyes had freshened and was making an excellent record. She produced 20,422 pounds of milk and 815.6 pounds of butter during the year.

Almost Lived with Her

When Topsy was dried off at the end of her year's record, Mr. Ace, then a sophomore in college, began fitting her up in shape to make a still better record. After the cow freshened he practically lived with her—when not engaged in class work or other college duties—fed and milked her four times daily and saw that she was comfortable at all times. The result was the highest seven-day milk record that has yet been made at the college dairy barn—651.4 pounds. This is an average of over ninety-two pounds of milk daily for the seven-day period, and with the continued good care that she will receive, it is expected that she will exceed her last yearly record of 20,422.4 pounds of milk and 815.6 pounds of butter.

Topsy Clothilde Keyes from the standpoint of individuality is also a beautiful cow. She carries a straight top line, a large middle and a shapely udder. In showing competition she would undoubtedly be a strong contender for the blue ribbon.—A. A. B.

Doing Her Full Share

A PRODUCTION of 30,538.8 pounds milk and 1037.65 pounds butterfat makes Helm Stella Mead Segis the sixty-eighth purebred Holstein-Friesian cow in the United States to produce more than 30,000 pounds milk in one year, and the ninety-fourth cow of the breed to hold a 365-day record over 1000 pounds butterfat. She made her record recently, at seven years of age, in the herd of F. M. Helm, of Fresno, California.

This cow's milk record is equal to the average production of two cows in the advanced registry of the Holstein-Friesian Association of America, and to the average of nine dairy cows on all farms in the United States as reported in the last government census.

Get busy with your **SPRINKLING CAN**

SPRING is the time to clean up and disinfect.

Time to get busy with the sprinkling can charged with a solution of Dr. Hess Dip and Disinfectant.

Sprinkle it in the poultry-house—in the nests, roosts, floors. Spray it in the cracks and crevices to kill the mites.

Sprinkle it in the cow barns, in the pig-pens, sinks, drains and closets—wherever there is filth or a foul odor. It kills the disease germs, keeps everything, everywhere, healthful and clean-smelling.

Tioga Proves Out Purebreds

Daughters of Association Bulls Beat Their Dams

TIOGA County, Pennsylvania, possesses seven proven sires in the seven blocks of the Tioga County Holstein Bull Association. Cooperative dairy breeding has been carried on since 1919, when the association was formed.

A recent survey by County Agent Paul Korb and S. J. Brownell, extension specialist in charge of bull association work shows that these seven sires have increased the production of eighty-three daughters, freshened during the past year, more than 20 per cent over that of their dams. This is the first crop of daughters to freshen from the association bulls.

Their Motto—Breed, Feed, Weed

The sire in the photograph has some daughters which have shown an increased production of forty-five per cent over their dams. The members in this block cooperate in the purchase of farm supplies and in the sale of their milk. "Breeding, feeding and weeding" is their motto as is shown by their herd sire, milk scale and milk sheet. The photograph shows the members of this block. They are: Giles Thomas, G. N. Davis, A. E. Mascho, Ashley Davis, Arthur Lane and M. L. McLain, all of Westfield, Pa.

Members of one block of Tioga County's Holstein Bull Association.

The inventory value of the herds in the association also has been increased thru the 465 daughters which they have from these sires. Of this number, 228 are purebreds which have a much better pedigree because of their bull associations sires than would otherwise have been possible.

Members of the association have sold in their community fifty-four sons of the seven association bulls. This will establish in the county one family of Holstein breeding which will be attractive to buyers looking for carload lots of similar breeding. Buyers selecting daughters of the bull association bulls are assured that they will be better than their dams.—K.

What the Records Tell

IN A recent study of the sex of calves dropped in the dairy herd at the Pennsylvania State College, it was found that the ratio of the sexes was practically even, fifty-two per cent being males and forty-eight per cent females. The College dairy herd was established in 1889 with grade Guernsey cows and a purebred Guernsey bull. At the present time the herd includes representatives of the Ayrshire, Jersey, Guernsey, Holstein, and Brown Swiss breeds and numbers 132 head.

From 1889 to 1924, 1197 calves were recorded in the college herd record books. Of this number 623 were males and 574 were females. This number includes seven sets of twins, three sets of male calves, four sets of females and two mixed pairs of male and female calves. Too often a herd sire is condemned because he seems to sire calves of one sex only or perhaps largely of one sex.

Since both the sire and dam influence the characteristics of their offspring, the sire oftentimes is unjustly condemned when a majority of the calves dropped in any one year are male or female. This is clearly shown by records which are kept over a long period of time or which includes a sex record of a large number of calves sired by one sire such as occurs in large herds. From such studies it has been found that the ratio of male to female calves is nearly equal.—A. L. B.

Stalls for Guernseys

Kindly give me size of stalls for Guernsey cows.—G. G. B., Philadelphia County, Pa.

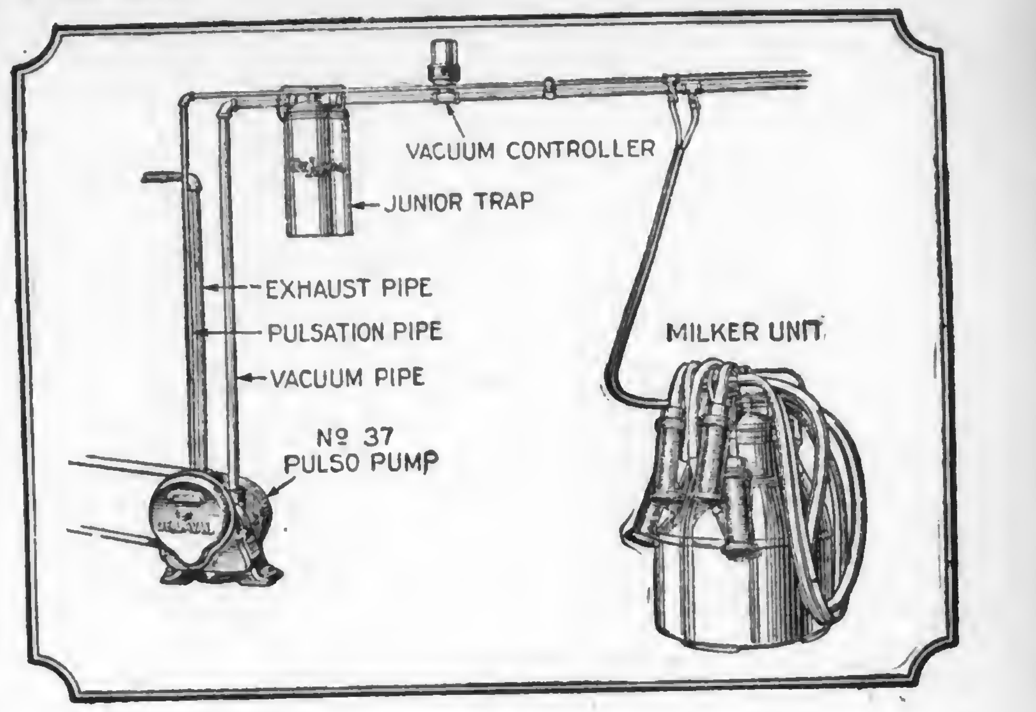
Cow stalls for Guernsey cows usually run from three feet four inches to three feet six inches in width. The latter width is usually preferred since narrow stall are inconvenient and are not comfortable for the cow. The average length of the stall platform for Guernsey cows usually runs from four feet six inches to four feet ten inches with an average length of about four feet eight inches.

In some barns, the stall is made slightly shorter at one end of the row of cows than at the other. This is done by making the gutter at a slight angle with the curb. This provides a graduated length of platform. The larger cows can then be placed at one end of the stable and the smaller cows at the end where the shorter platform is provided.—A. A. B.

An Active Calf Club

COUNTY AGENT P. H. SPRENKLE, recently visited every member of the Blooming Glen Calf Club, Bucks County, and found all animals belonging to members in good condition. Most of the heifers milked well during their first lactation period and are now coming in with their second calves. The results of a survey made relative to the effects of the calf club on dairy improvement in the community show that forty-two purebred Ayrshires have been purchased since June 12, 1922, and placed on eight different farms largely as a result of calf club activities.—A. L. B.

A crowd is not company, and faces are but a gallery of pictures, and talk but a tinkling cymbal, where there is no love.—Bacon



Announcing the DE LAVAL Junior Milker Outfit For Milking Small Herds

OWING to the remarkable success which De Laval Milkers have attained during the past nine years in saving time and labor, increasing the production of milk and improving its quality, as well as eliminating the drudgery and dislike of hand milking, there has arisen a widespread demand for a De Laval Milker for milking small herds.

In response to this demand, the De Laval Junior Milker Outfit has been designed and is now offered to small herd owners. Every user of this outfit can expect exactly the same satisfactory results as the thousands of other De Laval Milker users in this and all dairy countries of the world are obtaining, for it is exactly the same in operation as the regular De Laval Milker and differs only in that it has a Pulso-Pump and Trap of smaller capacity.

The De Laval Junior Milker is sold complete with one standard De Laval Unit and enough hangers and cocks for a 10-cow installation. It is designed, however, to operate two standard De Laval Milker Units when so desired, with an installation not exceeding 60 feet of pipe, and will milk as many cows as can be stanchioned within these limits.

This outfit can be operated by a ¾ hp. electric motor or a 1½ hp. gasoline engine, making it economical in operation.

At any later date should the owner of such an outfit increase his herd, the capacity of the milker can always be enlarged accordingly, at comparatively small expense.

$175.00*
for the Complete Outfit as shown above (except piping) consisting of
1 No. 37 Pulso-Pump
1 Junior Trap
1 Vacuum Controller
1 Complete Milker Unit
And enough hangers and cocks for a 10-cow installation.
Capable of operating 2 units within a 60 ft. installation.
**Slightly higher on Pacific Coast and in Western Canada.*

Pay for a Harder Out of Your Milk Checks

A silo is almost as necessary as a milk pail on the dairy farm. And if you have one silo, you probably need another—for summer feeding and reserve. Shrewd feeders are using less grain and more silage—they find it pays better under present conditions.

You can't control the price of milk but you can largely control your feeding costs. A Harder Silo will help you show a profit and you can pay for it mostly out of your milk checks.

It's made of the best Spruce or Oregon Fir, cut with beveled edges and square tongues and grooves to make a perfect fit. Then it is doweled and sealed to make it rigid and air-tight. Goes together so easily no skilled labor is needed to put it up. And once up, you have the best silo in the community—with the patented Harder-Victor Front

Write for our easy-payment plan and free book "Saving with Silos." Let us show you how to reduce your feed bills, increase your milk flow and add extra dollars to your bank account

Size, Soundness and Weight of Ears Measure Your Yield of Corn

Your real test of yield is the number of bushels of sound, dry, marketable Corn you grow per acre.

How your Corn starts off in the spring, how it develops and matures, depends on the plant food in the soil.

V-C Fertilizers will make your Corn grow more rapidly, and produce large, heavy ears that ripen before frost.

Early matured Corn means sound ears of greater feeding value, and less shrinkage.

V-C Fertilizers represent the best that the science of chemistry and agricultural practice know about the subject of plant food.

Ask your local dealer for V-C Fertilizers or write

Write Our Agricultural Service Bureau about your problems of soils, fertilizers and crops. This service is free.

Bakery Refuse for Hogs

Please inform me if ice cream cones are healthy for pigs and chickens? Does it pay to feed them? I buy them for fifty cents a hundred pounds. Is it good for brood sows?—Adam Roth, Bucks County, Pa.

The feeding of bakery by-products for hogs is becoming a universal practice in sections where a steady supply is available. Hogs will do well on such by-products when they are fed in combination with other feeds. They can be used as a substitute for corn with satisfactory results. If fed without corn they should be supplemented with tankage or fish meal at the rate of ten pounds of the bakery refuse to one of the protein supplement.

Protein Supplement Needed

A better combination is to feed equal parts of corn and bakery refuse by weight and supplement this with the protein feed at the rate of ten parts of the corn and refuse to one of the protein feed.

If the pigs can be fed on pasture the results will be more satisfactory than when fed in the dry lot. The price at which the ice cream cones can be purchased makes it a cheap feed for pigs and brood sows. The combination suggested will be satisfactory for the brood sows and pigs weighing over 100 pounds.

When fed to young pigs, it will be well to allow about five parts of the corn and bakery combination, three of wheat middlings, and one of tankage or fish meal.

The bakery refuse will also ma a satisfactory feed for poultry wh used in place of or in combinatio with corn.—W. H. T.

Feed Causes Lameness

I have a litter of three-month-old pigs that have always been kept with plenty of bedding, but they have gotten so lame they can hardly get up. They seem to want to crawl. What shall I do for them?—J. P., Erie County, Pa.

These pigs are not getting a ba anced ration which is the cause unthriftiness. The combination middlings and dish water does n meet the body needs of the pi Wheat middlings are fairly high i protein and are rich in phosphor but are low in calcium which ve likely is the cause of the pigs bein lame. The lack of exercise and plenty of sunlight may also contribute t the lack of condition. I would su gest the addition of corn or barle to the ration and a protein feed an animal origin. A combination corn or barley four parts, whea middlings three parts, and tankag or fish meal one part, will make good ration. If you have skimmil or buttermilk you can substitut that for the tankage or fish meal. The milk, if used, should be fed the rate of three pounds of milk t one pound of the grain mixtur without the tankage or fish meal. The tankage or fish meal can be secured from your local feed dealer.—W. H. Tomhave.

Early Forage Crops for Swine

ON ACCOUNT of the immature corn crop last fall a shortage of grain for hogs is found on many eastern farms. A considerable amount of grain can be saved by planning for large forage crops, especially for the dry brood sows. Young growing pigs' will also do well on forage crops, but must have the pasture supplemented with grain to get the best results.

Experiments show that the unlimited use of forage crops is of greatest economical value when corn and other grains are high in price. It is estimated that about one-third of the grain for young growing pigs can be replaced by green forage crops. When forage crops are extensively used the gains made on young pigs will not be as rapid as when an unlimited grain ration is fed; on the other hand, the cost of producing gains will be materially reduced.

Another factor that always enters into the problem of how to develop the young pigs is the difference in the price received for hogs that are ready for market in September and October and those ready in November and December. As a general rule, the price of hogs is higher during the early fall months than later in the year when the bulk of the hogs from the corn belt farms comes on the market.

Crops to Use

In order to meet this situation it is important to save as much grain as possible for the market hogs and maintain the breeding animals and young pigs that are to be retained in the herd on forage crops.

A field of rye planted last fall will provide early pasture before other more desirable crops are available. The hogs should be put on the rye when it is about six inches high so that they will make good use of the forage while it is young and tende and rye grows to maturity very rapidly during the spring months. An of the legume crops, such as clove or alfalfa, will furnish early sprin pasture if rye has not been seeded o the farm. Permanent pasture, such as blue grass, can also be used t advantage for early pasture.

Oats and Field Peas

There are a number of crops tha can be planted for summer pastur and will furnish an abundance o feed. When annual crops are used i is well to arrange for a series o plantings so that new pasture can b had at frequent intervals. Early pasture can be supplied by seeding Canadian field peas and oats early i the spring. A combination of on and one-half bushels of oats and one bushel of the peas will provide plenty of pasture. This crop should b put in early as the peas will do better during cool weather. The pigs should be turned into the pasture when the crop is about a foot high.

Dwarf Essex rape provides one of the most satisfactory crops for swine.

A combintion that is very often used consists of one and one-half bushels of oats and five pounds of rape per acre. When it is seeded alone it is desirable to use from eight to ten pounds of seed per acre. Successive seedings of rape about four weeks apart will provide a fresh supply of forage as needed during the summer. Other crops such as corn or soy beans, may be used with satisfactory results, but there are few crops that surpass the rape.

It will be well to plant a field of corn for early fall, to be hogged down or husked from the field.—W. H. T.

Above is shown Congoleum By-the-Yard No. 812. It is made in the 2-yard width only.

On the bedroom floor is shown Congoleum By-the-Yard No. 852—2 yds. wide. The 3-yard width is No. 4021.

You Get Guaranteed Satisfaction With Every Yard of Congoleum By-the-Yard!

A money-back pledge of satisfaction! That's the guarantee which goes with *Gold-Seal* Congoleum By-the-Yard.

And the Gold Seal (reproduced below) shows that you are getting *genuine* Congoleum. Insist that this Gold Seal appears on the face of the goods you buy.

Beautiful and Practical

All those features that have made Congoleum Art-Rugs the most popular floor-coverings in America are found in Congoleum By-the-Yard. Patterns are equally attractive, with the same very durable, waterproof surface that is so easily cleaned. A few strokes of a damp mop remove every trace of dust, dirt and spilled things.

Requires No Fastening

One of the most unusual things about Congoleum By-the-Yard is the fact that it requires no fastening of any kind. Cementing or tacking is never necessary to hold it in place, yet it never curls up at the edges and never buckles.

The variety of patterns and colors makes *Gold-Seal* Congoleum By-the-Yard desirable—and suitable—wherever the entire floor is to be covered. It is particularly appropriate for the kitchen, bathroom, pantry, halls and bedrooms.

Note the Low Prices

Two-Yard Width —**85c** per square yard
Three-Yard Width—**95c** per square yard

Owing to freight rates, prices in the South, west of the Mississippi, and in Canada are higher than those quoted.

Why drive a shabby car ?

Three days in the creek—
no harm to the Valspar-Enamel!

Trapped in the churning sandy bed of a mountain stream for three days—yet Wilfred Campbell's* car came out unscratched. Here's his story:—

"Our party was on its way into the mountains for a hunting trip when I misjudged a curve and plowed into a rough mountain stream. The car stalled deep in the pebbles and shifting bottom. There for three days it remained, all that time being rubbed and washed with gritty, sandy water.

"I had given it a coat of Valspar-Enamel and over this a coat of Valspar Clear Varnish.

"Its appearance I thought would be ruined, but it came out as handsome as ever—the wheels were not even scratched!"

That's the Valspar story whenever accidents occur. Valspar-Enamels give unmatched durability and service because they are Valspar itself plus finely ground pigments. Water, ice-cold or boiling hot, oils, acids, alkalies, mud, flying sand, have no effect on their hard, lustrous surface.

Valspar-Enamels are easy to use—follow the simple instructions on each can. Valspar-Enamels are economical—one quart will refinish the average small car.

Made in 12 standard colors—Red—*light and deep;* Blue—*light, medium and deep;* Green—*medium and deep;* Vermilion, Ivory, Bright Yellow, Gray and Brown. Also Black, White, Gold, Bronze, Aluminum, Flat Black.

* 125 E. Lindsay Street, Stockton, California

'Co-ops' May Cooperate

AT THE invitation of the Pennsylvania Farmers' Cooperative Federation, officers and members of Pennsylvania milk marketing organizations recently visited the large mills at Peoria, Illinois, where a great amount of the feed handled by eastern farmers' cooperative organizations is mixed. Among those who accepted the invitation were J. A. Matchett and W. S. Wise, representing the Dairymen's Cooperative Sales Company, the milk marketing organization in the Pittsburgh district. Representatives of the Interstate Milk Producers' Association were H. P. Allebach, president; and Robt. E. Brinton, treasurer.

The following officers and members of the board of directors of the Pennsylvania Farmers' Cooperative Federation also made the trip. John G. Miller, president; John P. Young, vice president; J. N. Rosenberger, secretary-treasurer; Directors E. H. Lovett, Morrisville; J. N. Glover, Vicksburg; P. R. Smith, Coudersport; Chas. H. Hays, North East; Robt. E. Atkinson, Wrightstown.

Visited Other Manufacturing Plants

During the visit to the Middle West several other plants manufacturing supplies for farmers were visited.

This tour may be taken as an indication of growing interest among farmers' representatives in the formulation of some plan for eliminating duplication of effort in the purchase of farm supplies thru cooperative organizations. The attitude of the three associations mentioned above, and of the Pennsylvania State Grange and State Farm Bureau Federation, would make it appear that these bodies may find a way to form a state-wide purchasing organization that will act as buying agent for a number, and perhaps all, of these associations.—W.

Penn State Bond Issue

PASSED for the fourth time by unanimous vote in the Legislature, it is hoped that the eight million dollar bond issue for the Pennsylvania State College will come before the voters of Pennsylvania for their approval in the November election of this year. If the bond issue is voted upon favorably, Penn State will have money available for buildings which are urgently needed. Altho new buildings would be provided for each school, the main engineering building will, no doubt, be the first new structure to be erected in order to relieve the crowded conditions existing in that school as a result of the disastrous fire in 1918.

System Considered Sound

The bond issue for State College has been characterized as a sound business proposition and is regarded as such by members of the Legislature. The state borrows at four per cent and by reverting an additional two per cent the buildings will be paid for by the state in twenty years. This method of raising money is not uncommon. Such a plan was used by the city of Philadelphia in building up its common school system and other states have made use of the same method for the betterment of their state institutions of higher education.—A. L. B.

It is not enough to be a "good, all-'round man." It is also necessary to be a good, all-square one.

None of us can live a full and useful life and be wholly absorbed in himself.—John Wanamaker.

Riverside
Oversize Cord **Tires** *and* **TUBES**

You Can't Buy Better Quality So Why Pay More?

We want to sell you a Riverside Tire on the basis of high quality. We say to you that a Riverside Tire will do *all* any other tire *can do*. They are guaranteed to run 10,000 miles *on your car*. They often go 18,000 miles. What more can any other tire do? *So why pay more?*

Built to Our Order To Equal the Best

Satisfactory service and long mileage are built into Riverside Tires at the factory under our supervision. They cost as much to make, contain as much or more good live rubber, just as strong fabric, and are as carefully made and inspected as any tire regardless of price.

Compare Riverside Tires Only with the Best Standard Tires

Riverside Tires are not to be compared for a moment with tires made lighter and smaller on purpose to sell for a little less or a little more than our tires. They are to be compared only with the best standard makes of superior quality.

Riversides are the safe tires for you to use. Big heavy blocks of *live* rubber and extra thick side studs and husky ribs grab the slippery roads and are your greatest protection against skidding.

Order at Our Risk

Our 53-year old guarantee protects you. Your money back if you are not satisfied.

If you have not received your copy of our Auto Supply Catalogue, just drop us a postcard requesting one.

Please send me two more Riverside Cords. I have two that have gone 6,000 miles and they look like they had been run only 1,000 miles. Hereafter nothing but Riversides for me.
William Sala, Cloquet, Minn.

Have used a pair of Riverside Cords for a year, over 10,000 miles, and they are still good. Other cords put on at the same time are gone.
Mr. M. A. Smith, Sioux Falls, S. D.

I have a Riverside Tire that has been on my car three years and seven months. Two of my neighbors are now using Riversides after seeing the splendid service they gave me.
J. R. Johnson, Pingree, N. D.

Chicago Kansas City St. Paul Portland, Ore. Oakland, Calif. Fort Worth

Ears of *"Lancaster County Sure Crop"*—a splendid double purpose sort.

Hoffman's Seed Corn

THE fertile soils of Lancaster County, Penna., produce strong-germed Seed Corn that yields heavily. And the cost is very little—less per acre than for almost any other Seed. It will pay you to plant the best.

"LANCASTER SURE CROP"—*Fine for Silo or Crib.* Grows tall and leafy, yielding a heavy tonnage of silage rich in grain. Matures well to the North. Any left from silo-filling can be husked for crib. Alvin Angerer, Michigan, writes: "I had ears that measured 16 inches long last fall, it also is a wonderful silo corn. I filled my 8 x 30 ft. silo with an acre and a half of this 'Lancaster County Sure Crop Corn.'" Read all about this Corn in our new Spring Catalog.

CATALOG and SAMPLES—FREE

Our new Spring Catalog also describes **"White Cap Yellow Dent"**—an extra-good crib corn, and other standard varieties. Eight heavy-yielding varieties of Oats. Maine-grown **Seed** Potatoes—all standard varieties. Best grades of hardy **Alfalfa** and northern-grown **Clover**. Explains how to get better stands of **Legumes**. Gives valuable pointers on **Soy Beans, Canada Oats**, and other specialty crops.

Write for this *free* Book today. Mention crops you intend to grow; we'll send samples. Get our Money-back and Freight-paid offers before buying Farm Seeds.

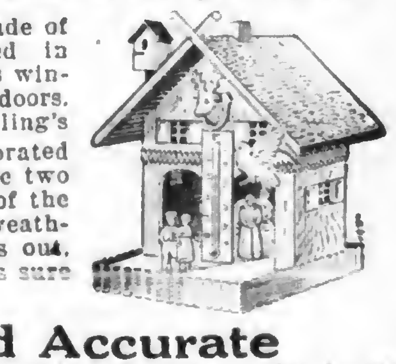
PLEASE say: "I saw your adv. in Pennsylvania Farmer."

Swiss Weather Prophet

A Weather Warning That is Dependable

The Swiss Weather Prophet is made of hardwood. The house is decorated in front with a stag's head, a bird, glass windows and a thermometer between the doors. On the green covered roof is a starling's cage. The inner background is decorated with views of Switzerland. There are two doorways. When the carved figures of the two children come out, look for fair weather; when the little old witch comes out, rain or snow with stormy weather is sure to come.



Scientific and Accurate

This instrument is made on scientific principles. The figures which prophesy the weather are suspended on a platform, with a piece of catgut. This catgut is sensitive to the least change of atmosphere and is so adjusted that the figure of the witch comes out in advance of rain and the figures of Hansel and Gretel for fine weather. This Weather House will be sent prepaid for two yearly subscriptions at $1.00 each or with your own renewal and 50 cents extra. Reward No. 126.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

I WENT home one Saturday, having thought much of my aunt and uncle since The Thing had descended upon us. I found them as cheerful as ever. For fear of disturbing their peace I said nothing of my fight with Wills or the cause of it. Uncle Peabody had cut the timber for our new house and hauled it to the mill. I returned to school in a better mind about them.

May had returned—a warm bright May. The roads were dry. The thorn trees had thatched their shapely roofs with vivid green. The maple leaves were bigger than a squirrel's foot, which meant as well, I knew, that the trout were jumping. The robins had returned. I had entered my seventeenth year and the work of the term was finished.

Having nothing to do one afternoon, I walked out on the road toward Ogdensburg for a look at the woods and fields. Soon I thought that I heard the sound of galloping hoofs behind me. Turning, I saw nothing, but imagined Sally coming and pulling up at my side. I wondered what I should say if she were really to come.

'Sally!" I exclaimed. "I have been looking at the violets and the green fields and back there I saw a thorn tree turning white, but I have seen no fairer thing than you."

They surprised me a little—those fine words that came so easily. What a school of talk was the house I lived in those days!

"I guess I'm getting Mr. Hacket's gift o' gab," I said to myself.

Again I heard the sound of galloping hoofs and as I looked back I saw Sally rounding the turn by the river and coming toward me at full speed, the mane of her pony flying back to her face. She pulled up beside me just as I had imagined she would do.

"Bart, I hate somebody terribly," said she.

"Whom?"

"A man who is coming to our house on the stage today. Granny Barnes is trying to get up a match between us. Father says he is rich and hopes he will want to marry me. I got mad about it. He is four years older than I am. Isn't that awful? I am going to be just as mean and hateful to him as I can."

"I guess they're only fooling you." I said.

"No, they mean it. I have heard them talking it over."

"He can not marry you."

"Why?"

It seemed to me that the time had come for me to speak out, and with burning cheeks I said:

"Because I think that God has married you to me already. Do you remember when we kissed each other by the wheat-field one day last summer?"

"Yes." She was looking down at the mane of her pony and her cheeks were red and her voice reminded me of the echoes that fill the cavern of a violin when a string is touched.

"Seems to me we were married that day. Seems so, every time I think of it, God asked me all the questions an' I answered yes to 'em. Do ye remember after we had kissed each other how that little bird sang?"

"Yes."

We had faced about and were walking back toward Canton, I close by the pony's side.

"May I kiss you again?"

She stopped the pony and leaned toward me and our lips met in a kiss the thought of which makes me lay down my pen and bow my head a moment while I think with reverence of that pure, sweet spring of memory in whose waters I love to wash my spirit.

We walked on and a song sparrow followed us perching on the fence-rails and blessing us with his song.

"I guess God has married us again," I declared.

"I knew that you were walking on this road and I had to see you." said she. "People have been saying such terrible things."

"What?"

"They say your uncle found the pocketbook that was lost and kept the money. They say he was the first man that went up the road after it was lost."

NOW The Thing stood uncovered before me in all its ugliness—The Thing born not of hate but of the mere love of excitements in people wearied by the dull routine and the reliable, plodding respectability of that countryside. The crime of Amos had been a great help in its way but as a topic it was worn out and would remain so until court convened.

"It's a lie—my uncle never saw the pocketbook. Some money was left to him by a relative in Vermont. That's how it happened that he bought a farm instead of going to the poorhouse when Grimshaw put the screws on him."

"I knew that your uncle didn't do it," she went on. "Father and mother couldn't tell you. So I had to."

"Why couldn't your father and mother tell me?"

"They didn't dare. Mr. Grimshaw made them promise that they would not speak to you or to any of your family. I heard them say that you and your uncle did right. Father told mother that he never knew a man so honest as your Uncle Peabody."

We went on in silence for a moment.

"I guess you know now why I couldn't let you go home with me that night," she remarked.

"Yes, and I think I know why you wouldn't have anything more to do with Henry Wills."

"I hate him. He said such horrid things about you and your uncle."

In a moment she asked: "What time is it?"

I looked at my new watch and answered: "It wants ten minutes of five."

"The stage is in long ago. They will be coming up this road to meet me. Father was going to take him for a walk before supper."

Just then we came upon the Silent Woman sitting among the dandelions by the roadside. She held a cup in her hand with some honey on its bottom and covered with a piece of glass.

"She is hunting bees," I said as we stopped beside her.

SHE rose and patted my shoulder with a smile and threw a kiss to Sally. Suddenly her face grew stern. She pointed toward the village and then at Sally. Up went her arm high above her head with one finger extended in that ominous gesture so familiar to me.

"She means that there is some danger ahead of you," I said.

The Silent Woman picked a long blade of grass and tipped its end in the honey at the bottom of the cup. She came close to Sally with the blade of grass between her thumb and finger.

"She is fixing a charm," I said

She smiled and nodded as she put a drop of honey on Sally's upper lip.

She held up her hands while her lips moved as if she were blessing us.

"I suppose it will not save me if I brush it off," said Sally.

We went on and in a moment a bee lighted on the honey. Nervously she struck at it and then cried out with pain.

"The bee has stung you," I said.

She covered her face with her handkerchief and made no answer

"Wait a minute—I'll get some clay," I said as I ran to the river bank.

I found some clay and moistened it with the water and returned.

"There, look at me!" she groaned "The bee hit my nose."

She uncovered her face, now deformed almost beyond recognition, her nose having swollen to one of great size and redness.

"You look like Rodney Barnes," I said with a laugh as I applied the clay to her afflicted nose.

"And I feel like the old boy. I think my nose is trying to jump off and run away."

The clay having been well applied she began surveying herself with a little hand mirror which she had carried in the pocket of her riding coat.

"What a fright I am!" she mused.

"But you are the best girl in the world."

"Don't waste your pretty talk on me now. I can't enjoy it—my nose aches so. I'd rather you'd tell me when—when it is easier for you to say it."

"We don't see each other very often."

"If you will come out on this road next Saturday afternoon I will r until i find you and then we have another talk."

"All right. I'll be here at fou thirty and I'll be thinking about every day until then."

"My nose feels better now." s said presently and added: "Y might tell me a little more if y want to."

"I love you even when you ha ceased to be beautiful," I said wi the ardor of the young

"That is grand! You know t age will sting us by and by, Bart" she answered with a sigh and in tone of womanly wisdom.

We were nearing the village. She wiped the mud from her prodigio nose and I wet her handkerchief a pool of water and helped her wash it. Soon we saw two men ap proaching us in the road. In a mo ment I observed that one was Mr Horace Dunkelberg; the other stranger and a remarkably hand young man he was, about twenty two years of age and dressed in th height of fashion. I remember well his tall, athletic figure, his gra eyes, his small dark moustache an his admirable manners. Both wer appalled at the look of Sally

"Why, girl, what has happened t you?" her father asked.

Then I saw what a playful so was Sally's. The girl was a bo actress.

"Been riding in the country" said she. "Is this Mr. Latour?"

"This is Mr. Latour. Sally," sa her father.

They shook hands.

"I am glad to see you" said th stranger.

"They say I am worth seeing" said Sally. "This is my friend, Mr Baynes. When you are tired of se ing me, look at him."

I shook the hand he offered me

"Of course, we can't all be g looking." Sally remarked with a sig as if her misfortune were permanen

Mr. Horace Dunkelberg and laughed heartily—for I had told hi in a whisper what had happened t Sally—while Mr. Latour looked little embarrassed.

"My face is not beautiful, but the say I have a good heart." Sally as sured the stranger.

THEY started on I excused mysel and took a trail thru the wood to another road. Just there, with Sal ly waving her hand to me as I stood for a moment in the edge of th woods, the curtain falls on this high ly romantic period of my life

Uncle Peabody came for me tha evening. It was about the middle o the next week that I received th letter from Sally:

"Dear Bart:—Mr. Latour gave m and drove to Potsdam in the evening Said he had to meet Mr. Parish I think that he had seen enough o me. I began to hope he would sta —he was so good looking, but moth er is very glad that he went, and so am I, for our minister told us tha he is one of the wickedest young me in the state. He is very rich and very bad, they say. I wonder if ol Kate knew about him Her charm worked well anyway—didn't it? My nose was all right in the morning. Sorry that I can't meet you Saturday. Mother and I are packing up to go away for the summer. Don't forget me. I shall be thinking every day of those lovely things you said to me. I don't know what they will try to do with me, and I don't care. I really think as you do. Bart, that God has married us to each other.

Yours forever,
Sally Dunkelberg."

How often I read those words—so like all the careless words of the young!

Three times that winter I had seen Benjamin Grimshaw followed by the Silent Woman clothed in rangs and pointing with her finger. Mr. Hacket said that she probably watched for him out of her little window above the blacksmith shop that overlooked the south road. When he came to town she followed. I always greeted the woman when I passed her, but when she was on the trail of the money-lender she seemed unaware of my presence, so intent was she on the strange task she had set herself. If he were not in sight she smiled when passing me, but neither spoke nor nodded.

Grimshaw had gone about his business as usual when I saw him last, but I had noted a look of the worried cat in his face. He had seemed to be under extreme irritation. He scolded every man who spoke to him. The notion came to me that her finger was getting down to the quick.

The trial of Amos came on. He had had "blood on his feet," as they used to say, all the way from Lickityspit to Lewis County in his flight, having attacked and slightly wounded two men with a bowie knife who had tried to detain him at Rainy Lake. He had also shot at an officer in the vicinity of Lowville, where his arrest was effected. He had been identified by all these men, and so his character as a desperate man had been established. This in connection with the scar on his face and the tracks, which the boots of Amos fitted, and the broken gun stock convinced the jury of his guilt.

The most interesting bit of testimony which came out at the trial was this passage from a yellow paper-covered tale which had been discovered hidden in the haymow of the Grimshaw barn:

"Lightfoot waited in the bushes with his trusty rifle in hand. When the two unsuspecting travelers reached a point nearly opposite him he raised his rifle and glanced over its shining barrel and saw that the flight of his bullet would cut the throats of both his persecutors. He pulled the trigger and the bullet sped to its mark. Both men plunged to the ground as if they had been smitten by a thunderbolt. Lightfoot leaped from cover and seized the rearing horses, and mounting one of them while he led the other, headed them down the trail, and in no great hurry, for he knew that the lake was between him and Blodgett and that the latter's boat was in no condition to hold water."

It was the swift and deadly execution of Lightfoot which Amos had been imitating, as he presently confessed

I knew then the power of words—even foolish words—over the minds of the young when they are printed and spread abroad

I remember well the look of the venerable Judge Cady as he pronounced the sentence of death upon Amos Grimshaw. A ray of sunlight slanting thru a window in the late afternoon fell upon his gracious countenance, shining also, with the softer light of his spirit. Slowly, solemnly, kindly, he spoke the words of doom. It was his way of saying them that first made me feel the dignity and majesty of the law. The kind and fatherly tone of his voice put me in mind of that Supremest Court which is above all question and which was swiftly to enter judgment in this matter and in others related to it.

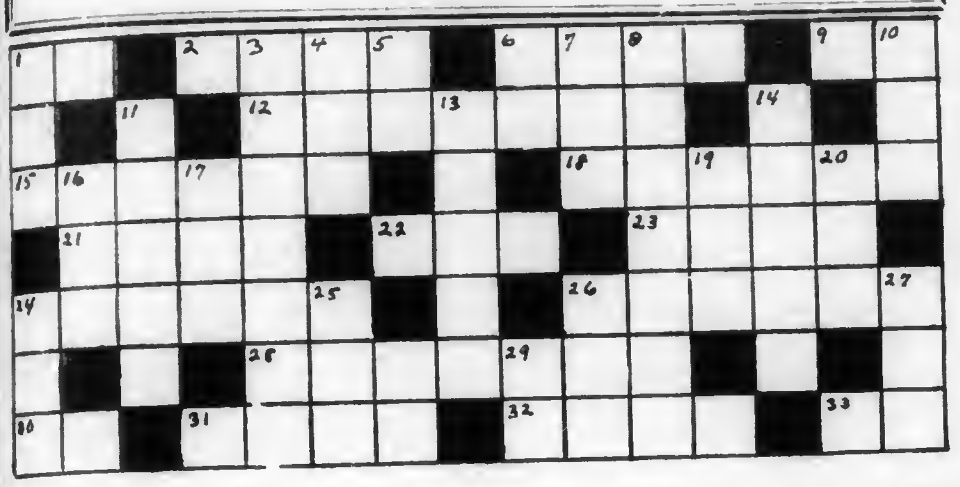
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 26 (across) is MATINS and 17 (down) is IRA. You may begin anywhere in the puzzle. Follow the definitions carefully, and, by noting letters common to two words, you will soon have a clew to help you. The solution to this puzzle will appear in an early issue.

READING ACROSS

1. Preposition
2. Nimble
6. Certain beverages
9. Moderately loud, abbreviation used in music
12. Rejection
15. The state of being active
18. One who owes another
21. Having a moderate amount of heat
22. An undeveloped flower
23. To look upon

Combined Poison & Fungicide
Bowker's Pyrox
Bowker Chemical Co.
STIR WELL BEFORE WEIGHING OUT
KEEP FROM FREEZING

NEVER before have you had a spray material so remarkably smooth, soft, cream-like — so easy to mix, so handy, so effective as this year's Pyrox.

Simply dip Pyrox out of the can, stir it into cold water and in a minute or so you're ready with a mixture that's absolutely correct, sprays mistlike through finest nozzles, covers foliage completely *and sticks like paint.*

Pyrox is the great combined *insecticide* and *fungicide.* It has no equal for killing or repelling insects and preventing blights. What's more, Pyrox improves foliage — and you know "it's the healthy top that makes the bumper crop." Ideal also for home gardener and truck farmer. Jars, cans, drums and barrels. Dealers everywhere.

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I am sorry that Cousin Ruth is sick. I do not like to see anyone sick. I am ten years old and am in the sixth grade. My mother takes me to school every morning and I walk home at night. Wishing Cousin Ruth good luck and hoping she won't get sick again.—Irma M. Hamel, Cape May County, N. J.

Thanks for your good wishes. I'm feeling better now.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends.—How many Forum friends like to help in the syrup making? I love to do it. We have a large sugar bush and have over a hundred trees tapped. My sister and brothers and I take some potatoes and apples and roast them. How many Forum friends like roasted potatoes and apples?

I have a pet hen, her name is Biddy. She is very tame and flies up on my shoulder when I come to feed the chickens. She was the first hen which sat on eggs and I set her myself three weeks ago. Now she has ten little fluffy chicks out of eleven. Do you love chicks and children, Cousin Ruth?—Genevieve Weiss, Wyoming County, Pa.

P.S.—Cousin Ruth, if I send some pictures can you return them when you are thru with them?

Yes, I'll return any pictures you send if you mark on the back of them: "Please return."

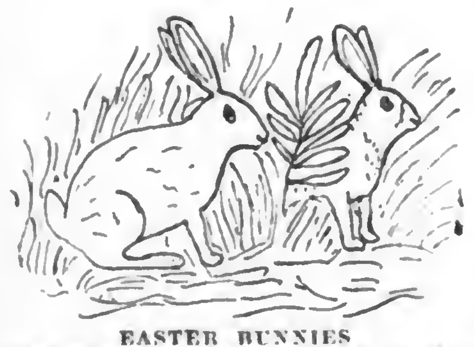
COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I saw some girls from Adams County had written and I thought I would write, too. How many of the Forum girls like to go bathing in the summertime when it is so hot? I am sure I do. This summer I would like to go to visit my sister that lives down in Virginia. She lives close to the Potomac River and I can go bathing then.

How many of the Forum members like to answer riddles? I sure do. Cousin Ruth, tell some of your boys and girls to send some riddles to you so you can print them.—Margaret Seylar, Adams County, Pa.

Surely I'm glad to receive riddles from you, but don't forget to send me the answers, too. I want to have on file all answers to the riddles published on the page.

COUSIN RUTH.



EASTER BUNNIES
Clarence Altman, Westmoreland Co., Pa.

Dear Cousin Ruth:—I have been reading Y. P. F. for a long time and I think it is very nice. I used some of the recipes that the Forum friends put in Pennsylvania Farmer and they were fine.

We live on a farm of about 200 acres. My father and brother work the farm. I help them draw up the hay.—Grace Updike, Bradford County, Pa.

I'm so glad you mentioned trying some of the Forum recipes. I've been wanting to try them, too, but so far I haven't found the time. Have any of the rest of you used our recipes?

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I live on a small farm. We have three horses; one of them is a little bay. She is twenty years old but good as when she was five. Her name is Fannie, the next one is a big bay, he is about twelve years old and good, too. His name is Dandy and he is a dandy. The other one is a big white horse. He is very gentle and his name is Ned. We just got him a day or two ago so we don't know how he works but I will write later and tell you about him. I also have a pet cat which is gray and white.—Evelyn Holcombe, Hunterdon County, N. J.

Dear Cousin Ruth and Forum Friends:—My sister and I have lots of fun coasting down hill when there is snow. We have one dog, its name is Laddie. We had another dog but it got killed on the railroad tracks. My sister made a cake. I will send you the recipe.

½ cup butter
1 cup sugar
4 egg whites
10 drops lemon extract
½ cup milk
1 cup flour
½ cup corn starch
1 teaspoon baking powder

Bake in two deep jelly cake tins.

Cousin Ruth, I forgot to tell you about the cake I made. It tasted as if I put in half a can of baking powder—Christine F. Simpson, Wayne County, Pa.

Dear Cousin Ruth:—I live on a farm of 213 acres which is beautifully situated on the shores of a small lake. I am ten years old and am in the eighth grade. I go to the Howard School of which my father is teacher. If you want me to I will send you some riddles.

I think the letters on the Forum page would be more interesting if the children would put stories of travel in them. Don't you, Cousin Ruth? In my next letter I am going to tell about a visit to the circus if you would like me to.—Marion Snyder, Susquehanna County, Pa.

A very good suggestion, Marion. Yes, I like very much to hear about the travels of my Forum friends. Do tell me about the circus. Just think, I have never yet been!

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I am ten years old and I go to the Delaware Run School. I have two cousins that go to school with me.

We had lots of snow this winter. I had lots of fun riding down hill. For pets I have two dogs and one horse whose name is Bell. The dogs' names are Jack and Nellie. Jack is a rabbit dog and Nellie is a cow dog.—Charles Fogelman, Northumberland County, Pa.

Cousin Ruth, do you like to do crossword puzzles? I do. I live on a farm of about forty-seven acres. For pets I have one dog named Collie, and three cats. I have a sheep which is very small for a last year's sheep.

My dog has a very pretty white ring around his neck and has all white feet. He is a very good cow dog.

Come on, McKean County girls and boys, write. I will try to wake up Crosby boys and girls, too, Cousin Ruth, and next time I write I will draw something or give a recipe or something of the kind.

Well, Cousin Ruth, I want to tell you if it hadn't been for the Forum page when I had the chicken-pox I would have been so uneasy.—Mable Stevens, McKean County, Pa.

Dear Cousin Ruth and Forum Friends:—I live on a farm of fifty acres with my brother-in-law. We have two mules and one horse. We also have two cows and about 100 chickens. We are getting between four and five dozen eggs a day. We have a pig and she is very tame. She was raised on a bottle. If she sees you coming with a bucket of water she will run into you and knock you over.—John Plymire, York County, Pa.

Dear Cousin Ruth and Forum Friends:—I surely never miss reading the Forum page. The letters are always so interesting. I am busy this year trying to pass the eighth grade. Everybody who is in the eighth grade knows how anxious we get along this time of year, don't we? But it does not do any good to worry, I suppose.

I am thirteen years old and have five miles to go to school. Quite a way, eh? But we have two miles of concrete so it isn't so bad.—Hilda Bohlayer, Bradford County, Pa.

Dear Cousin Ruth:—Here are some riddles for the Forum page.

1. Why does a dog wag his tail?
2. Why is a room full of married ladies like an empty one?
3. What is it you find once in a minute, twice in a moment and not once in a thousand years?
4. If a poker, shovel and rake come to $7.50, what does a ton of coal come to?—William R. Everhart, Centre County, Pa.

Look for the answers next week. Who else has some good riddles?

COUSIN RUTH.

HAVING A JOLLY GOOD TIME
Grace Zimmerman, Frederick Co., Md.

Dear Cousin Ruth and Forum Friends:—I am ten years old and live on a farm. We have three pets, a little black and white dog named Jack and two cats, Tom and Billie. Our little dog will stand on his hind legs and walk around in a circle. I have one sister sixteen years old who goes to high school, and one brother six years old. The schoolhouse is on our farm.—Edith Johnston, Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—It has been a long while since I wrote. I have been reading Pennsylvania Farmer every week. What is the matter with the Gloucester County boys and girls? I do not write very often because I can hardly find time. I am so busy working most of the time, but because I do not write the other boys and girls can write.

I have another pet since I wrote last. It is a little pup and its name is Tuttles. Tuttles does not like any one to touch her head or mouth. She likes to play with you. She is very cute and I am going to take a picture of her some day when she is a little larger and I may send a picture of my pets and myself some time.

I hope that Cousin Ruth is getting better from her illness. I do not like to be sick and I do not believe any one else does either.

How do you boys and girls like this kind of weather? I like it very much and play outside as much as I can. At school we jump rope most of the time and we play high-water-low, which we like very much. I hope you boys and girls are making good use of this kind of weather. It will do you all good to be out in the sunshine, I think. Today the girls went up in the woods to eat their lunch and our teacher went with them.

Three cheers for Cousin Ruth and Forum friends.—Dorothy E. Reuter, Gloucester County, N. J.

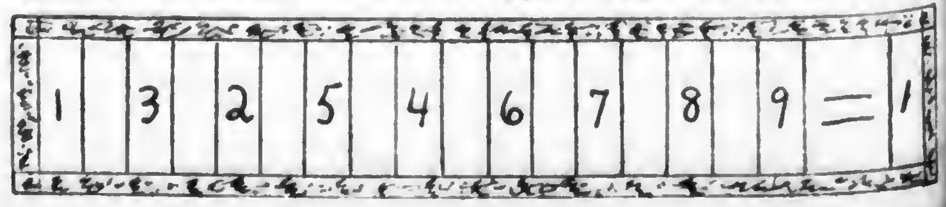
OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—The long string of numbers will really come to just one as the picture says if you will put in the spaces between the numbers the sign "plus" or "minus" at the right spots. Of course, the first sign you will put in will be a "plus" and you have the first part reading "one plus three." When you have completed this little arithmetic example and have made it really equal "1," send the string of numbers and signs to me on a POSTAL CARD so that it reaches me by April 18. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in the March 21 issue of Pennsylvania Farmer is: IF AT FIRST YOU DON'T SUCCEED TRY, TRY AGAIN. (The letters read backwards).

The prize winners are: Lester K. Beam, age 11, Goodyear, Pa.; Lula Belle Blose, age 10, Sprankle Mills, Pa., Elizabeth Donahue, age 9, Clarion, Pa.; William Hartge, age 1, Parnassus, Pa.; Nellie Heller, age 11, Aspers, Pa.; Walter Horsey, Jr., age 9, Laurel, Del.; Nellie Parr, age 8, Woodbine, Pa.; Craig Ramsay, age 11, Coatesville, Pa.; Clair E. Sink, age 8, Washington, Pa.; Carl Young, age 9, Daisytown, Pa.



PASSING EVENTS IN PICTURES

The Proof of the Pudding

Let Your Folks Test the Truth of the Old Adage

THE following makes a pudding that is light and feathery:

CURRANT COTTAGE PUDDING

½ cup butter.
1 cup sugar.
2 eggs (separate).
½ cup milk.
½ cup currants or seedless raisins.
1 tablespoon vanilla.
1 large cup flour.
1 heaping teaspoon baking powder.
A pinch of salt.

Method: Cream butter and sugar, add well-beaten egg yolks, milk, flavoring, currants or raisins, and flour, to which the salt and baking powder have been added.

Last of all add the stiffly beaten egg whites. Bake in a moderate oven about 3-4 of an hour. This recipe makes six large servings. It should be served warm.

SAUCE FOR THE PUDDING

1-4 cup flour.
1 egg.
1 cup sugar.
A pinch of salt.
2 cups boiling water.
1 tablespoon butter.

Flavoring (Lemon and a dash of nutmeg is good).

Method: Mix flour to a thin paste with a little cold water. Add boiling water, stirring constantly. Then cook till transparent.

Add some of the sugar to the well-beaten egg. Add this slowly to the sauce, again stirring constantly. Cook a little longer, then add the rest of the sugar.

Remove from fire, and add butter and flavoring. The egg may be left out, but it gives the sauce a delightful golden color. The sauce should be used warm, as it jellies when cold.

A pudding of this kind makes a good, hearty dessert to round out a simple meal, and it is well liked by the men folks. It is equally good without the fruit, tho not so high in food value.

The sauce is fine for other puddings and dumplings. When used over apple dumplings we like it with vanilla instead of lemon.—E. M. W.

Owners Have Troubles

HAVING read in the issue of March 7 the article, "A Renter's "Difficulties," I wish to assure the writer that we, as owners, can fully sympathize with her as a renter. Tho we are owners, we have no electric lights, bathroom, or furnace. We still use kerosene lamps, tho they do not give as good light as we would like.

Looking for Better Days

We take our baths in a wooden washtub near the kitchen stove in cool and cold weather. We have only one stove, that being the cook stove. The children slept upstairs all winter in bitter cold rooms. Our own room downstairs was none too warm, the windows being covered with frost during the coldest weather.

We do not expect to be able to change these conditions for several years, since we must feed, clothe and educate the children and build up the farm. Sometimes the children say it would be nice to have a bathroom or some other convenience, but if children don't learn contentment without those things, I believe they will not be contented with them.

Since we own the farm we cannot blame the landlord for not providing all these things. Would blaming the landlord bring them anyway? We rented for seven years, and did most of our own repairing during that time.

We have four school children, two girls and two boys. The house needs repairing, plastering, painting and sanitary plumbing. The farm was run down. Our oat crop was a failure the first year and the corn crop a failure for two years.

We still have courage to keep going, tho!—Mrs. O. B. C.

A Thank-You Garden

A HUSBAND and wife who have just built and moved into a new bungalow, have what they call a "thank-you garden." They have a hardy border around the house and flower beds filled with gifts from relatives and friends.

Anyone whose home has been for a long time in the same place, and who loves flowers, will just naturally accumulate several varieties and have a surplus. The surplus they will be glad to share with people who are starting a new home.

The "thank you" shrubbery surrounding the new bungalow of which I write, would have cost a lot of money if purchased at a florist's. The makers of the new home feel rich with their well-established flower garden, their greenery and blooms which came without money and without price, and which they justly call the "thank-you garden."—N.D.O.

A Sum in Arithmetic

HAVING sold our farm and moved to a small place where we have no milk without buying it, I decided to check up and see how far one quart of milk would go in our small family of two grown people. I bought the quart for eight cents from a neighbor.

I first used a portion of it in a nice hot slaw, using about one-quarter of a cabbage.

Next, some of the milk went into a vegetable soup of sliced potatoes, celery, onions, etc., for supper.

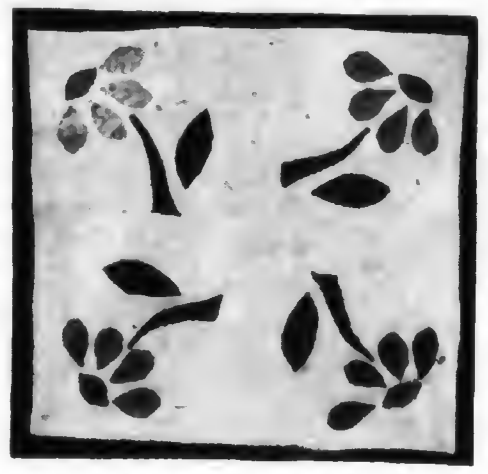
For breakfast I made pancakes from prepared flour, using part water and part milk.

For another dinner I served mashed potatoes, which again took a portion of milk. I also mode cocoa, using a small quantity of milk in that, finally had enough left to mois some odd pieces of bread for Fre toast.—R. S.

Daisies for the Bedroom

IS IT any wonder the daisy is a general favorite when its uses are so varied and it is so attractive wherever used? For the girl's room (all girls like pretty rooms, you know) this is one of the most striking and dainty patterns for the quilt, curtains and dresser scarf. It is so simple that any girl who is handy with the needle and who is interested in the little touches of color that add so much to the bed room, can make.

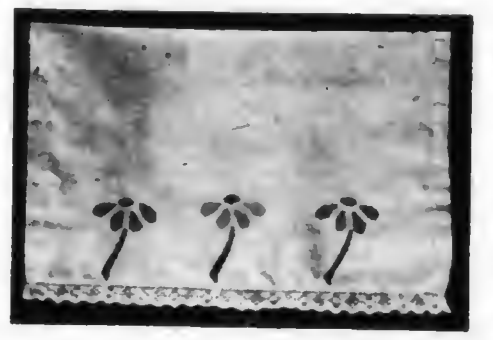
There are two ways to join the blocks of the quilt. If joined solid the daisies form little clusters that nestle close together, or if set together with plain squares they are more scattered. It is only a matter of choice which is more attractive.



Daisy quilt block.

Four shades, yellow, pink, apricot and lavender—one daisy of each color in each block—make a cluster of four of each color when joined solid. But the daisies in white with yellow centers and green leaves, appliqued on light blue will make a very uncommon quilt. The curtains and dresser scarf to match are especially striking if the walls are white, ivory, or even light gray. It is cool looking in summer and cozy in winter.

A plain hem or a narrow edge of linen lace will finish the curtain and scarf ends.—C. S.



Curtain or scarf ends.

Pattern, 20c. The set can be ordered from the Household Editor.

Basket Information

DEAR EDITOR:—Will you please publish for me the names of some firms where I may buy reed, both the round and flat, for basket weaving, the lessons of which you have started in your paper? I hope you will publish the lessons each week. I have a brother who is afflicted who has learned something about basket making and is very anxious to learn new things about it. Please do us this favor. I have no doubt lots of people would like to know also.—A Reader.

We cannot publish the names of commercial firms, but if you will send a stamped self-addressed envelop to the Household Editor, we shall be glad to put you in touch with a basket supply house. Close to one hundred requests for this information have been received and filled.

FOR THREE-YEAR OL

An Easter Dessert Not to Scorned by the Older Folk

MAKE a soft custard as follo Scald one pint of milk in double boiler and pour slowly o four egg yolks that have been slig ly beaten and mixed with one-quar cup sugar and one-quarter teas salt. Return to the double boiler a cook (stirring constantly) until mixture is smooth and creamy begins to thicken. Then strain it a cold dish and flavor with one-h teaspoon vanilla.

Out of the egg whites make a m ingue by beating them until stiff then beating into them four tab spoons sugar. Flavor with one t spoon vanilla. Drop rounding spoo ful of the mérinque into very gen boiling water and cook for thr minutes, turning once during coo ing. Remove carefully with a ski mer and put on top of the custar

This is a variation of the o fashioned "floating island." T poaching of the egg whites makes prettier to look at and more delicio to eat than the original dish.—I.S

If the Hours Were Mi

IF I had two extra hours each I surely would, first of all, the early morning, gather my ch dren together and read a chapt from the Book of books; to tea them that it is the Creator to Wh we owe our first duty. I would tea them about our second duty, al that which we owe to man,—to as we wish to be done by, to be neighbor to mankind, and to ob the greatest of all commandme "Love one another."

I would use a part of my time read good books and papers, to i prove our minds and lives.

I would use a part to do some no essential, yet pleasant, things, make the essential tasks more w come. I would spend some of time in planning my work. A g plan makes the work easier and e ables one to accomplish more in t hours than is possible in three four without a plan.

Sometimes I would use some of time to visit a friend, to go to a pi nic supper, to do a piece of fan work, plant some flowers, make bouquet, or a hat.

There are so many enjoyab things that might be done that ev the extra two hours would prove f too short. Usually the extra ti would be spent for the benefit of t whole family. But sometimes I wou spend it just to please myself.— M. S.

CANNED BEEF

When opening a jar of cann beef, make a gravy for it by brow ing flour and two onions in a litt lard and adding to these the juic of the meat that has been draine off, as much milk as is needed make up the desired quantity gravy, and salt and pepper to tast

Brown your meat in a pan (if has not been browned before can ning), then add the gravy and sim mer for about fifteen minutes. Po tato water may be substituted fo milk if necessary.—Mrs. F. G. M.

My Hay Box Fireless Cooker

Not Much on Looks but Great on Results

Dear Editor: —I was just reading in Pennsylvania Farmer about Mrs. E. M. Anderson's fireless cooker or hay box. She says all it cost her was ten cents for an empty lard tub. I would like her to tell me how she made her cooker, as I can't afford to buy one.—E. M. W., Pa.

My first hay box, which was very ade and entirely unornamented, ked better than my present one hich is papered to match my kitch and has a top neatly covered with shable tile paper. The plain old goods box would cook all day, ereas the present lard tub begins cool after three hours. This is, of urse, because, being smaller, the tub does not allow as much ce for packing with hay.

A Ten Minute Job

We make a hay box in just about minutes. Any fairly tight box tub is lined with several thick sses of newspaper, laid in but not sted. Hay is packed tightly in the ttom to a depth of about four ches, and the food containers are aced on this in the position they e to occupy when in use. Loose y is packed around them till they ll stay in place. Then the hay is cked just as tightly as possible ound and between them (if there more than one container) filling ery bit of space to the top of the ntainers. The container makes a ug nest from which it may readily e removed without disturbing the y.

Some people line the nest with paper to avoid dust, but paper soon wears out, and the projecting edges are dustier than nice clean hay. I always wipe the edges of the container carefully with a damp cloth where the cover goes on, before opening, so that if any particles of dust have gathered, they won't fall into the food.

Have the Box Large Enough

The outside box should extend four inches above the top of the containers. We started with a four-inch foundation of hay at the bottom, and allowed for four inches of packing around the sides. Now for the top we make a four-inch cushion, the size and shape of the box top, to lay over the whole after the food is in.

A bran sack stuffed lightly with hay and crowded closely into the available space will serve the purpose, but more closely woven material is better. Cambric is ideal because so little dust sifts thru it. Hay is the best stuffing I know. I find that other fillings absorb moisture and don't hold heat as well.

My first hay box was oblong and held three enameled pails of assorted sizes (in a row, with plenty of packing between) with tight-fitting covers. The lard tub I am now using holds only one (two-quart) pail. Aluminum pails might be better, but these work nicely.

Using the Hay Box

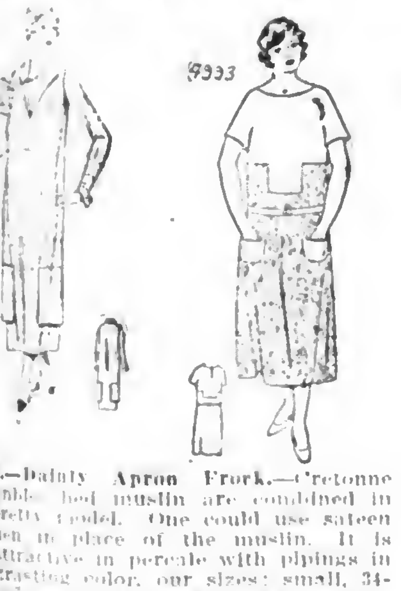
BOILED DINNER.—Right after breakfast put the meat in the pail

(Continued on page 27)

Anticipating Many Needs

Directions for **Ordering.**—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

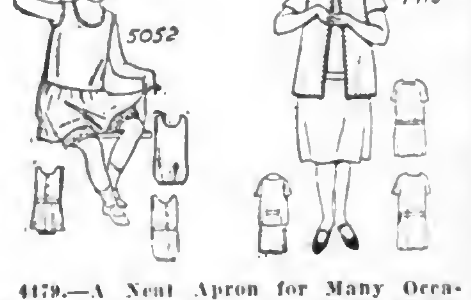
—With New Features—The straight line dress is still a general favorite. In the model here shown checked flannel is combined with plain flannel. One could use wool bengaline with satin, or, have one material, and decorate the flounce, ollar and cuffs with braiding or stitchry. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. If made as illustrated, for a 38-inch size 3¼ yards of checked material and 1⅛ yard of plain material 40 inches wide is required. Width of skirt at the foot is 1½ yard. If made of one material 4⅜ yards is required. Pattern, 10 cents.



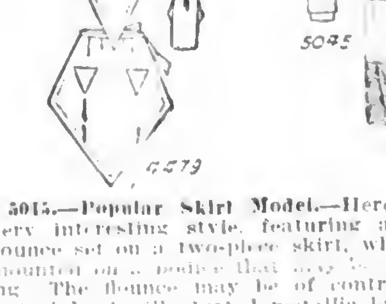
991.—Dainty Apron Frock.—Cretonne and unbleached muslin are combined in this pretty model. One could use sateen or linen in place of the muslin. It is also attractive in percale with pipings in a contrasting color. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2¾ yards of figured material and 1⅞ yard of plain material 36 inches wide. Pattern, 10 cents.

5052.—A Practical Undergarment.—This model comprises a petticoat, bloomers and waist. The petticoat may be omitted. The back of bloomers and petticoat are finished in "drop" style. Muslin, cambric, or crepe could be used for this style. Five sizes: 4, 6, 8, 10 and 12 years. To make the garment as illustrated for an eight-year size in the large view will require 2⅞ yards of 36-inch material. If petticoat is omitted 1½ yard will be required. Pattern, 10 cents.

710.—A Jaunty Model.—This "costume" is quite up-to-date, and attractive for any of the material now in vogue. The jacket may be omitted, or it may be made of contrasting material. Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2¼ yards for the dress and 1 yard for the jacket of 40-inch material. Mustard color linen with stitching in brown floss would be nice for this model or pongee in a natural shade with pipings or bindings of white or green. Pattern, 10 cents.



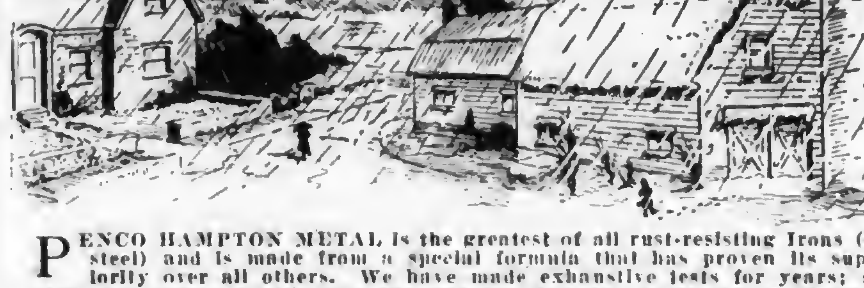
4179.—A Neat Apron for Many Occasions.—Lawn batiste, dotted Swiss or silk could be used for this style. It is also attractive for cretonne or chintz. One size; medium, and requires 1½ yard of 36-inch material. Pattern, 10 cents.



5015.—Popular Skirt Model.—Here is a very interesting style, featuring a deep flounce set on a two-piece skirt, which is mounted on a bodice that may be of lining. The flounce may be of contrasting material. As illustrated metallic brocade and satin are combined. One could have this in two shades of kasha, charmeen or linen. Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. The width of the skirt at the foot is 1½ yard. To make this design as illustrated for a medium size will require one yard of lining 32 inches wide, for the bodice, one yard of figured material for the flounce, 32 inches wide, and 2¼ yards of plain material for the skirt portions. If skirt and flounce portions are made of like material 3¼ yards are required. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

To a Hampton Roof
the Kind of Weather
Makes No Difference



PENCO HAMPTON METAL is the greatest of all rust-resisting irons (not steel) and is made from a special formula that has proven its superiority over all others. We have made exhaustive tests for years; soil tests, acid tests, salt air tests and weather tests and know that in Hampton Metal we're offering you the best that money will buy; that is if you measure value by the number of years a roof will last.

For barns, sheds, pump and tool houses, in fact all farm buildings there is nothing else so good. It is fireproof, spark-proof and withstands the blistering sun, blustering winds, beating sleet and driving rains alike and, if properly grounded is one of the best lightning safeguards. Can be put on easily and quickly and may be had in all styles; corrugated, V-Crimp, Pressed Standing Seam, Imitation brick or stone, etc. NEEDS NO PAINT.

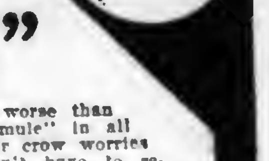
If there's such a thing as roofing permanently
it's with Hampton Metal

You owe it to yourself to know more about how metal is made and why some is better and lasts longer than others. If you wish to include measurements of any space you'd like to cover we'll be glad to figure it and give you a price, including nails, and washers, delivered right to your station.

PENN METAL COMPANY, 25th and Wharton Sts. Philadelphia, Penna.

Send for Hampton Booklet and a sample of Hampton metal.

"Scoot, for the love o' Mike!"



is the wail of the crows when once they light on a corn-field where the seed-corn has been coated with Stanley's Crow Repellent. One taste is enough. And every crow, every squirrel, every mole, every gopher, every pest of any kind, keeps off that field. It doesn't kill them, for it isn't poisonous, but it's worse than any other "white mule" in all crow-dom. And your crow worries are over. You won't have to replant hill after hill. Much of your valuable time is saved, besides all the extra cost of seed-corn to replant with. And for every $1.00 you spend for

Stanley's Crow Repellent

you will reap from 30 to 40 more bushels of corn at harvest time. It's easy to use—simply mix it with your seed-corn. You don't have to wait for it even to dry. And it never clogs the planter. If you have any doubts as to what Stanley's Crow Repellent will do for you, ask us to send you copies of hundreds of letters we have received and every one of these testimonials unsolicited. Large can, enough for 2 bu. of seed-corn (8 to 10 acres), $1.50. Half size can, $1.00. If your hardware, drug or seed store doesn't have it in stock, then order direct. "Money Back" guarantee. Address Cedar Hill Formulae Co., Box 500R, New Britain, Conn.

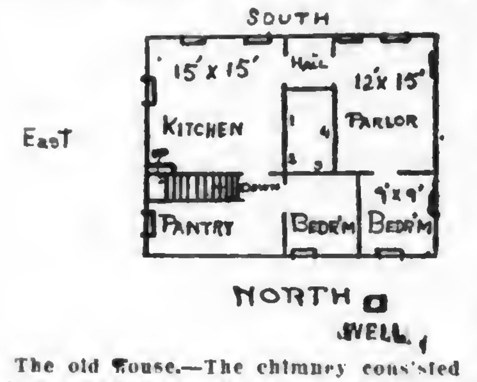
Where 'Building On' Succeede

This Home Grew by a Process of Evolution

THE general interest in building more convenient homes may also prove valuable to those who enlarge their old houses. The house where the pantry is across the dining room from the kitchen; the one where the way to the cellar and storeroom leads the entire length of the big dining room and then into a passageway; these are only two examples of the too-common way efficiency in housekeeping is lost.

In this connection I am reminded of a house that was built over 100 years ago by a very simple plan, and has passed successfully thru several changes of arrangement. The big chimney forming the core of the



The old House.—The chimney consisted of: 1, big fireplace; 2, bake oven; 3, tiny fireplace; 4, parlor fireplace.

house provided an enormous fireplace with bakeoven next, a somewhat smaller "parlor" fireplace on the opposite side, and a tiny one in the rear to heat a bedroom.

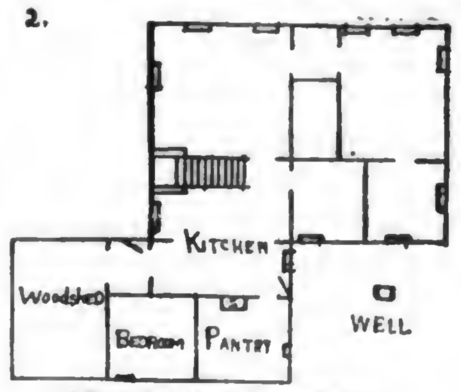
Planned for Convenience

Tho I do not know the exact details of arrangement, it seems to me to have been well planned for the period. The water supply was near and required no carrying up or down steps, just a few feet from the pantry door, where much of the work was probably done.

One interesting feature is the little cupboard in the front hall built into a space in the big chimney, which I am told used to hold the best dishes. Upstairs, a bedroom was finished off over the big kitchen. Sometime later the little room over the pantry was plastered, and one over the parlor.

After a time either better finances or enlarging family caused an addition to be built, one story high. Part of the main roof was continued out toward the rear. From the size of the new chimney, it is evident that this change was made after cooking

2.



After the first alterations.—5, new chimney.

stoves came into use. Still, one finds the cellar and the well accessible and the woodshed convenient. About this time another door was cut at the foot of the stairs—making them backstairs as well as front ones—so as to permit going up from the new kitchen.

Somewhat less than twenty years ago, two important changes were brought about. Pipe was laid from a spring up on the hill to a backyard trough, and later, to a sink in the kitchen under the west window. I wonder how folks ever managed with the nearest water at the bottom of a well!

The other change was more radical—a new kitchen. Partitions were shoved so the new or third kit took in part of the former one the little bedroom with the firepl A hole was cut in the big chimney admit pipe and a range stood bef the old fireplace, now closed.

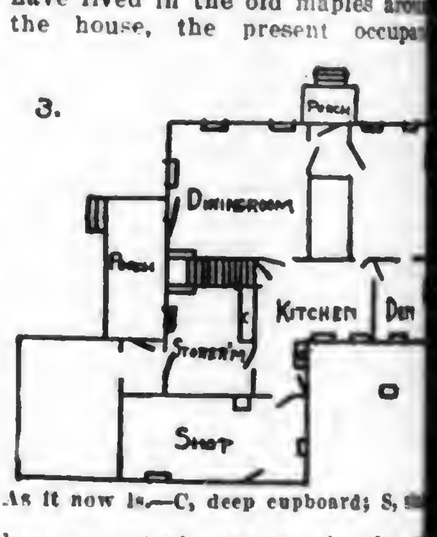
Where the cupboards used to b can only imagine, but about time I first saw the house, they w placed between the new kitchen a the remaining portion of the old which had then became a storero for food and for the dairy equ ment, such as separator, churn, a butterworker. The back part of house is now a carpenter shop a repair room for the man's use. As has a stove, it can be used as a su mer kitchen if necessary.

And at Last a Sleeping Balcony

Other changes have followed: little porch over the front door, larger porch on the east end with sleeping balcony above. The lat opens from the tiny east bedro which now serves as dressingroo The former open attic along the ba of the main part is now finished off a bedroom, a bathroom, and a h leading to the head of the stairs. T square place in front of the chimney is used as a storeroom; chimney occupies much less space this floor than downstairs.

While it is interesting to hear the three generations born in t four-poster that stood near the pr ent kitchen cabinet, and to wond how many generations of oriol have lived in the old maples arou the house, the present occupa

3.



As it now is.—C, deep cupboard; S, s

have practical reasons also for e joying their home. As reminders the "good old days," they still ha the old wood-carved mantel, t doors of wide boards, held togeth by cleats, and equipped with lo latches, and, of course, the sto chimney and stone cellar steps, offset their modern plumbing, tel phone, and fireless cooker.—Vida Bates.

A Hint for Busy Mothe

I HAVE heard mothers of lar families remark that their chi dren seem to tire of the sameness school lunch. For a mother who h three or four, or even more, lunch to pack every morning, a "sandwic loaf," made the previous evenin and wrapped in a moist cloth, sav time and makes a change.

Take a loaf of baker's bread, r move the crust and slice lengthwis the full length of the loaf. Aft each slice has been buttered, spre each with a different filling. O may be ground ham, veal, chicken beef; another cheese; another cre lettuce or parsley; another yolks o eggs seasoned with salt, pepper an vinegar; another may be pickles o olives. The filling may be varied ac cording to the taste of the childre

After all is put together, wrap a directed, and put in a cool place. I the morning this is ready to slic crosswise and wrap. I think this i at least a partial solution to th sandwich problem for the mothe with many lunches to pack.—M. E.

What Is a Fair Day's Work?

his Reader Uses the Short Cuts That Save Time

THE question propounded by one of the readers of Pennsylvania rmer regarding a fair day's work the woman with four children d men to room and board is an in- resting one to me, for it is one I ve been studying for fourteen ars.

I haven't had the children all of fourteen years, it is true, but d men to room and board I have ways had. In fact I started my mar- life with my husband and his ther and one or two hired men by month plus much hired help by day and a tester a good share of winter.

Just at present I have my two ildren and three men, including husband to care for. I do all my k, washing and ironing, and care the chickens and yard and gar- n.

A Working System Necessary

I fail to see that an extra man or makes any more work for the wife. The extra beds do take e, but not very much if there is good working system. Just now I ppen to have five bedrooms and ve beds to take care of.

I cling hard to my theory that a woman must have a working system and stay as near as she can to her stem, or surely she will not only ll to be a good housekeeper but will become a drudge.

I feel it an absolute necessity to go over my entire house every day, especially in the winter. The vac- um sweeper is run over rugs every day but wash day, and the floors are all wiped up. It is easier to keep a house fairly clean and in order than to let things go and then have a gen- al cleaning up time that gets on every ones nerves.

My day begins at five-fifteen. I keep steadily at house work every day until one to one-thirty. By that time usually the house is cleaned up and foods are prepared for supper, so that I have the afternoon for read- ng or mending or any extra work that comes along.

That Hour to Myself

However, before I begin the extra work, which is sewing a good share of the time, I do have an hour to my- elf. A bath and clean clothes come first, for somehow I feel so much bet- ter if I get into a clean gingham dress Then I almost always take a nap. Sometimes I do not sleep longer than fifteen or twenty minues, but I waken feeling as fit as I did in the morning.

At four o'clock the chickens have to be tended. We have supper at six thirty. While I am getting supper I get foods ready for breakfast as much as possible, bacon sliced, etc. Daughter helps with the supper dishes, and we try to spend not more than twenty minutes doing them.

The children go to bed at eight and I read to them the half hour before they go.

No Sewing in the Evening

Our bed time is nine and I do not sew in the evenings—chiefly because my husband says it spoils his evenings, for I have had as long a day as he has and he says he knows when to quit.

Today is wash day. I do not have a power washer, but I do have an excellent hand machine. I try to use my brains on wash day if I ever do, for my big heavy washing is the hardest job of the week. My washing was on the line at eleven o'clock and the wash room was cleaned up.

My ironing is small—because I make it small. It consists mostly of my gingham house dresses—six of them, a clean one each morning—and the table linen.

A Minimum of Ironing

Sister is wearing flannel middies to school, brother wears khaki waists that are easily pressed out. The bedding is put right back on the beds without an iron touching it. Towels and underwear are likewise put away without ironing.

My house dresses and the table linen can be ironed in two hours. Of course, if the clothes have to be dried in the wash room some of the bedding does have to be run over with an iron, but the sun shines brightly and warmly today, and there is enough breeze to blow the wrinkles out of things.

I do not feel that I am overworked at all, and I really like my job. I spent eleven weeks doing state institute work, and I am quite sure this work is easier than that, tho I enjoyed that very much. And there were a good many afternoons when a long-winded speaker had the floor that I would have given all of my old shoes for a sure-enough, honest-to-goodness nap such as I have every afternoon when I am at home.—May H. Mumaw

My Hay Box Fireless Cooker

(Continued from page 25)

that goes with your hay box, cover it with boiling water (with salt and pepper to taste) and put it to cook on your range or oil stove. In half an hour add a small cabbage cut in quarters a few turnips sliced rather thick, and (if you like them) sliced carrots and parsnips. Boil fifteen minute longer, then add potatoes.

When it again boils hard, remove quickly to the hay box nest, cover the pail, put on the cushion, and close the hay box with a tight board cover. Do absolutely anything else you want to do till it is time to serve that dinner.

The chief beauty of the hay box is that an hour or so, more or less, doesn't matter in the cooking of most things. Of course, more time is required than over a fire; potatoes need at least an hour, but leaving the meal longer does no harm. It can't burn and since it isn't boiling furiously it doesn't get mushy. It is fine to come from church ravenously hungry and only have to take the dinner out of the hay box.

BEANS.—Start them cooking in the usual way, and after parboiling, season to taste, let boil hard for a few minutes on the stove, and pack the container in the hay box. If the box is large and tightly packed, the beans will go on cooking all day if you want them to.

BEEF STEW.—Brown a teaspoon or more of sugar in an iron kettle, add a small minced onion, and let cook. Add to this for each pound of meat one tablespoon each of flour and suet, stir well, and add one pint of hot water for every pound. Now add the meat cut into small dice and salt and pepper to taste.

When it boils hard, pack in the hay box and leave for two hours If you want the whole meal in one dish, add the potatoes after the first hour, bring to a boil once more and return to the hay box for an hour.

The hay box is fine for apples, for cereals, for rice pudding—in fact, for anything that is boiled or stewed. It won't bake or brown or fry, but the oil stove will, so they combine admirably.—Mrs. E. M. Anderson.

Bringing a Giant to School

Teaching tricks to a giant is child's play compared to the problems met by the men who trained electricity to the service of mankind.

It took over a hundred years from the time Franklin first brought electricity from the clouds, before the electric light and power industry could make even its first crude beginning. But now, in less than half that time this industry has leaped from nothing to the service of sixteen million consumers.

The day in 1882, when Edison opened his first generating station in New York, marks the birthday of electric light and power service. It was 1884 before electric motors could be bought. The transformer without which the range and usefulness of electric power would have been forever restricted was brought out in 1885 by William Stanley. In 1890 the first long distance power line was built in Colorado, and water power development became a practical possibility.

Since that time cheaper production and wider distribution have been the problems on which the industry has concentrated. The steam and water turbine and the mercury boiler are making cheaper production possible. High power transmission lines and interconnection are daily broadening the territory served.

The task now engaging the best thought of the industry is electric service for the farmer. This is still the greatest problem of them all.

The Committee on the Relation of Electricity to Agriculture is composed of economists and engineers representing the U. S. Departments of Agriculture, Commerce and the Interior, American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, Farm Lighting Manufacturing Association, and the National Electric Light Association.

THE DOUBLE UTILITY WASHING MACHINE

Can Be Used as a Water Motor or Hand Washer

Thirty-nine years of washing machine building experience is embodied in the QUEEN WATER MOTOR WASHER.

All parts are carefully made of the very best material—and with average care, this machine should last for years.

It is a compact, scientifically constructed machine and will be found very efficient in operation. The patented centerpiece prevents clothes from tearing—the sheerest fabrics can be washed with entire safety.

See this machine at your dealer's, or write to us for folder describing the Queen Water Motor Washer

County Notes

(continued from page 7)

farmers are busy preparing for potato planting, as the soil here is lighter and about two weeks earlier than in northern townships. Indications are that there will be a large acreage planted to the tubers this year. For several weeks past farmers have been hauling seed and fertilizers. An unusually large number are testing their seed corn owing to the August frost which hurt much of the 1924 crop before it matured. Many farmers who have old corn are finding that their 1923 crop tests better than that of 1924. The land is being made ready for corn. In the upper end of the county the trimming of fruit trees is being finished and spraying is in full swing. Farm machinery is being overhauled and put in shape for active service. Eighteen flocks of Jersey Black Giant chickens have been certified and one approved; one flock of Barred Rocks has been certified. The certification of poultry was started in New Jersey in 1923 with Jersey Black Giants to get true Giants for breeding purposes. Hatching is well under way, some doing it at home, but many having their eggs hatched on the custom basis at the big hatcheries. The new testing by the State Department of Agriculture, for bacillary white diarrhea disease germs, thru blood testing, is proving very helpful. The blood tests are taken from each bird, as they are inspected for certification, and sent to the poultry laboratory at New Brunswick. The report is returned to the owner, and each bird showing this disease is removed from the flock. A few Mercer County flocks have been both tested and certified.—J. F. H., March 30.

Monroe County, Pa.—Heavy electrical storms, accompanied by high winds, passed over this county early in the morning of March 20. The Monroe County Pomona Grange No. 64 met with the Hamilton Grange in the Kellersville Church on Saturday, March 21. The road from the Carbon County line to Stroudsburg is soon to be concreted, work to begin about April 1.—C. E. S., March 31.

Montgomery County, Pa.—Not much plowing has been done yet nor is the manure all hauled. Spraying fruit trees, sowing clover seed and building fence are the chief jobs at present. Public farm sales are not as numerous as they were but lots of cows are being brought in from western and northern counties. Wheat and grass fields look fair, altho some report poor stands of wheat. Industrial conditions have not improved much. The farmers' meetings conducted under the supervision of the Farm Bureau were a success. Our county agent, Mr Waltz, has planned a way to reach every farmer who needs help. A circular letter has been sent out with questions which are to be checked and sent into the Farm Bureau office. Montgomery County Pomona Grange held its regular meeting at Sanatoga with a large attendance. Prices: eggs are slightly scarcer and higher, selling for [illegible]; live chickens, 28c, butter country, 52c; creamery, 60c; wheat $1.[illegible]; oats [illegible]; mill feeds dropped slightly; bran, $1.90; gluten, $2.15; oil meal, $2.75, 21 per cent dairy feed, $2.50.—C. N. D., March [illegible].

Sullivan County, Pa.—Practically all farmers [illegible] their manure out. The spring plowing is well under way. Forest fires have been very scarce. This spring has necessitated a great deal of road work. The demand for hay is growing, altho the price remains the same. Prices, eggs, 26c; butter, 40c; lard, 25c; oats, 70c; buckwheat, $1.15; potatoes, 75c; hay, $15.—M[illegible], April 1.

Susquehanna County, Pa.—Very little plowing has been done. Many farm buildings and some towns have suffered disastrous fires of late. More auction sales than usual. A community auction, where all the residents can put up household goods, farming implements and livestock, will be held in Dimock, at the community building the latter part of the month. Numerous "milk meetings" held during the past week. The majority of creameries are [illegible] plants. Hay plentiful. Price low. Less maple sugar made than usual. Maple syrup, $2.25 gal. Price of all feeds [illegible]. Potatoes and apples [illegible]; eggs, 28c; dairy butter, 18c.—E. M. [illegible], April 1.

Union County, Pa.—Many farmers have begun [illegible] sod for corn or stalks for oats, [illegible] others are hauling manure [illegible]. Clover seed is being sown. Public [illegible] will be continued all of this week [illegible] is generally selling well. A few [illegible] are still without tenants and farm [illegible] boys are hard to get. Some [illegible] [illegible] and potatoes. Most [illegible] are buying certified seed [illegible] thru the winter in better [illegible] was expected from the [illegible] which it started the winter.—J. N. [illegible], March 31.

Wayne County, Pa.—Three interesting meetings were held during the week by the extension association of Wayne County Farm Bureau, getting considerable work on [illegible] orchard pruning, spraying, fertilizing, thinning and cover crop. Little [illegible] has been done to fruit buds, [illegible] peach trees, the majority of which were winter-killed. At the annual meeting of the Wayne County Fruit Growers' Association the following officers were elected: President, Bert S. Hull, Waymart, Pa.; vice presidents, William H. Bullock, Dyberry, and Homer Bonear, Cherry Ridge; secretary, T. H. Olver, Honesdale; treasurer, Amasa Keyes, Beach Lake, Pa. In some sections of the county farmers have commenced to plow, the red shale soil being in good condition. Wayne County has had a fair run of maple sap this spring; syrup retailing at $2 per gallon and sugar at 40c per pound. At public vendues cows bring from $45@85 per head. Several dairymen have signed up in the county for tuberculin testing, the latest acquisition being Salem township.—E. B. C., March 30.

Lancaster Tobacco Letter

ALTHO sales of the 1924 crop of Pennsylvania tobacco are abating and there are fewer buyers in the field today than there were a week ago, the prices paid for the leaf seem to have become steady and are holding, in the case of good quality crops, at around fifteen and sixteen cents.

Much low grade tobacco is being bought at six, seven and eight cents per pound, however. At least one-fourth of the crop is still in the hands of the growers.

The filler grades of the 1924 crop are finding ready sale, and several concerns have been in Lancaster County buying up these goods from packers at four and four and one-half cents per pound in the bundle.

Movement toward Cooperation

The retarded movement of the crop, as well as the establishment of a price level by buyers which growers deem too low, has led a group of tobacco farmers to gather for the purpose of packing their crop and holding it for a more favorable market. This attempt at cooperative packing is not to be confused with the movement headed by the Lancaster County Farm Bureau looking toward the establishment of a cooperative marketing association.

Announcement was made last week by farm bureau officials that, in the event of the formation of a cooperative marketing association, the 1924 leaf, which is now unsold and about to be packed by the growers, could probably be handled in a separate pool.

Much interest is being evinced in growing and packing circles on the question of cooperative marketing, and the proposed campaign will be followed with mixed emotions by tobacco men.—Garden Spot Farmer.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUG. 24, 1912.

of PENNSYLVANIA FARMER, published weekly at Philadelphia, Pa., April 1, 1925.

County of Philadelphia, ss.
State of Pennsylvania,

Before me, a Notary Public in and for the State and county aforesaid, personally appeared Neff Laing, who, having been duly sworn according to law, deposes and says that he is the Business Manager of PENNSYLVANIA FARMER, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, The Lawrence Publishing Company, Philadelphia, Pa.

Editor R. P. Kester .... Newtown, Pa.
Managing Editor, R. P. Kester .... Newtown, Pa.
Business Manager, Neff Laing .... Philadelphia, Pa.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

Arthur Capper .... Topeka, Kas.
Citizens Savings & Trust Co., Trustee, for M[illegible] and M[illegible] Lawrence .... Cleveland, O.
M[illegible] .... Cleveland, O.
Kate E. Munsell .... Detroit, Mich.
[illegible] .... Lakewood, O.
Neff [illegible] .... Philadelphia, Pa.
I. R. W[illegible] .... Detroit, Mich.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: [illegible]

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

Neff Laing, Business Manager.

Sworn to and subscribed before me this 26th day of March, 1925.

William A. Casner, Notary Public.
My commission expires March 6th, 1927.

BETTER TRUCK CROPS

Ask for your copy right away—

We would like to call personally on every truck grower and hand him his free copy of "Better Truck Crops" but we can't do that—so we are asking you to send in your address so that we can mail it to you.

You will be interested in this new booklet because it shows how *profits* can be made. It contains photographs of actual results, as well as much valuable data on fertilization which will enable you to study the methods of other successful truck growers.

Every page is interesting—the data has been supplied by authorities who know the most profitable fertilizers for truck crops—you can read all of it easily in one hour.

To get your copy quickly, fill in the form below and send it to us. Or, if more handy, write your name and address on a postal and send it in.

Please attend to this now! By so doing, you will learn how *potash pays* truck growers.

BALLOON *Gum-Dipped* CORDS

Save You Money

Gum-Dipping means real tire economy.

This special Firestone process—the very foundation of Balloon tire success—insulates every fibre of every cord with rubber—giving *extra strength* to withstand the extra flexing strain.

The way these thin-wall Gum-Dipped Balloons resist rut wear and punctures is truly remarkable.

Take advantage of the comfort, safety and economy of Full-Size Balloons. See the nearest Firestone Dealer who will apply Gum-Dipped Balloons at low cost, with an allowance for your old tires.

Maintaining the Humus Supply

Ways to Replace Organic Matter Used by Crops

By J. G. LIPMAN, Staff Contributor and Advisor

DIFFERENT people will give different definitions to the word "humus." In a general way, every farmer understands that humus represents something in the soil that was formed in the decomposition of vegetable matter. It is understood that this partly decayed vegetable matter serves to give the soil a darker color, makes it more mellow and friable, improves its ability to retain moisture and serves as food for the great host of invisible organisms consisting of bacteria, fungi, protozoa and algae.

To the student of soils, humus, or, as many prefer to call it, soil organic matter, means something more. He knows that nearly all of the nitrogen of the soil is present in the organic matter. In so far as the soil is rich in this material it is also rich in nitrogen and phosphorus. It is evidently for this reason that the average farmer and gardener regards a dark colored soil as a productive soil, knowing that a dark colored soil is usually rich in humus.

Soil Constantly Losing Humus

The full significance of humus is best realized when we make a study of its sources and its value. In every soil a sufficient amount of humus is formed within every growing season. A certain amount is destroyed and lost from the soil. When the gains of humus equal the losses, the fertility of the land may remain unchanged. If there is any undesirable change, it might have to do with the loss of lime, potash and phosphoric acid rather than the loss of nitrogen or the deterioration in the texture of the soil. Under some systems of farming the gains may be greater than the losses, while under other systems of farming the losses may be much greater than the gains. In the last instance, the quality of the soil will necessarily suffer.

In any ordinary system of farming considerable quantities of organic matter are added to the soil by residues and stubble as well as in applications of manure or of other substances of plant or animal origin. Where the crops are vigorous and where large quantities of manure are used the supply of soil humus may be fairly well maintained. However, much will depend on the frequency and thoroness of tillage.

Like Fanning a Flame

The more often the soil is plowed and stirred, the greater will be the amount of vegetable matter that will decompose. This would correspond to the frequent turning over of a compost heap. The stirring serves to facilitate aeration and this in turn creates more favorable conditions for the activities of bacteria and of other microorganisms which decompose the organic matter.

The process of tillage is in a sense similar to the process of fanning burning embers, which burst into flame as the supply of oxygen is increased. On the other hand, where the soil is left undisturbed the vegetable residues accumulate faster than they are destroyed. This is true of meadows and pastures. Where land has thus been kept in grass for a number of years the accumulation of organic matter may be very considerable.

From what has just been said it is evident that the maintenance of soil humus will depend on the system of farming, that is, the kinds of crops grown, the nature of the rotation, and the use of animal or green manures.

Length of Rotation a Factor

It is much easier to maintain a sufficient supply of organic matter in heavier soils than it is in lighter soils. This must necessarily be so, since heavy soils are not so well aerated as lighter soils and their organic matter does not, for this reason, decay so fast as does the organic matter in lighter soils. Under extreme conditions, that is, in very open soils, it is next to impossible to accumulate any considerable quantity of organic matter.

The length of the rotation is another important factor. For instance, in the rotation consisting of corn, oats and clover,—one fairly common in certain sections of the corn belt,—organic matter may be fairly well maintained by the large supply of roots and stubble of clover grown once in three years. In any longer rotation of tilled crops the losses of organic matter may be relatively much greater.

The very common rotation of corn, oats, wheat and timothy and clover is usually insufficient for maintaining the necessary supply of organic matter in the soil. In fact, it has been demonstrated by many years of practice that this rotation often fails to maintain the fertility of the soil even when considerable livestock is kept on the farm and more or less commercial fertilizer is used

Many Good Cover Crops

Each soil type and every system of farming has its peculiar problems in respect to the maintenance of soil humus. By this time every successful farmer knows that cover crops and green manuring crops are an essential need in farming medium and light soils.

A large number of crops, including rye, wheat, the different clovers, vetches, cow peas, soy beans, lupines, etc., are utilized as green manures. The owner of sandy land, if he is progressive, will not neglect the use of suitable cover crops in the fall and often in the early summer. For heavier soils this need is not so obvious, because the loss of organic matter is less striking. Moreover heavy land, when it is wet, may be readily damaged by tillage, whereas, this danger does not exist in the case of better drained sandy soils containing a smaller proportion of silt and clay.

It has been shown that there is a large number of crops suitable for green manuring purposes. Velvet beans, beggarweed, Japan clover,

(Continued on page 32)

Jardine Believes in Cooperative Marketing

"AS A means of bringing about more orderly production and marketing I can not overemphasize the need for strong, efficiently managed, cooperative marketing associations.

"Cooperation is an effort to create a better system of marketing, to produce and market products that consumers demand, and to distribute these commodities with the least possible cost. Its most helpful feature comes from the education in business which farmers obtain in their efforts to conduct cooperative associations efficiently.

"Indeed, the whole movement rests on the support given it by individual farmers."—William M. Jardine, United States Secretary of Agriculture.

Maintaining the Humus Supply

(Continued from page 30)

cow peas and soy beans have become well established in the South. Farther north, crimson clover, soy beans, the vetches and sweet clover are rendering a similar service. However, their value would be much less but for the fact that the practice of green manuring is accompanied by the use of commercial fertilizers.

It has been demonstrated that the presence of available potash, and very often available phosphoric acid, will stimulate the growth of cover crops and green manure crops to a remarkable degree. A better root development and a greater accumulation of vegetable matter are the result of such stimulated growth. It is also true that the more generous fertilization of grass lands will lead to the accumulation not only of larger amounts of organic matter but will produce a type of organic matter that is relatively richer in nitrogen.

Why Lime and Fertilizer Pay

The understanding of the fundamental relationships involved in the maintenance of soil humus must help the farmer to make his land better and, therefore, to produce larger crops. Since our most valuable green manures — the legumes — do not thrive in strongly acid soils and since they respond usually to applications of available potash and phosphates, liming and fertilization have a direct connection with the maintenance of organic matter in soils.

The intensive loss of organic matter due to tillage must be made good either by a larger supply of animal manures, by the more intelligent growing of green manures, by suitable crop rotations, and by the fertilization of our grass lands.

Soils Will Hold Organic Matter

We long ago passed the time when the maintenance of humus in the soil without large numbers of livestock was regarded as an impossibility. The evidence is overwhelming that not only heavy soils but even the lightest of soils can be made to retain a sufficient quantity of organic matter where they are properly treated and, because of the knowledge that we now possess, there is less excuse for us to neglect the methods which alone can assure us a sufficient supply of organic matter.

Satisfactory crop yields are not possible where the soil is lacking in nitrogen, where air and water do not circulate freely and where the soil bacteria are starved for lack of food and rapidly diminish in numbers.

This is an old subject, but the realization of its importance grows stronger as we learn to know more about the chemistry of the soil and the nature of the chemical and bacterial processes going on in it.

Course for Sawyers

DURING the third week in April, a course for portable sawmill men, will be given by the farm forestry department of the Pennsylvania State College. This is the first time that a course of such a nature has been offered in the United States. The purpose of the week's course will be to instruct farmers, and others interested, in the use of the portable sawmill and also to teach timber estimating, putting stumpage price on timber, and methods relating to the marketing of lumber and other forest products.

A portable sawmill will be set up in the forestry woodlot on the campus and an experienced sawyer will be secured to give instruction in its use. On three days of the week lectures will be given by specialists on the sawing and marketing of lumber. Part of the week will be devoted to instruction in the filing of crosscut and circular saws by experts from a famous saw company in Philadelphia. Programs for the entire week's work may be secured from the Farm Forestry Department, State College, Pa.—A. L. B.

Size of Farm Families

THE average size of farm families in thirteen Pennsylvania counties for which the triennial farm census tabulations are completed is 4.32. This is an interesting contrast to the farm family numbering six to ten a few generations ago. Cambria County leads the list with 5.51 as the average size family. The lowest is Bradford County with an average of 3.57. In all cases there are more males than females. The average of the thirteen counties is 2.27 males to 2.10 females.

These figures give one answer at least why there is a farm labor problem in many sections of the state. Since the number of females in the farm home is so small, the problem of securing adequate household help is a limiting factor in farming. This condition points to the need and possibilities of electricity as an aid in the farm home where modern conveniences can be made a satisfactory substitute for hired help.—J.

Motor Vehicles in United States

AUTOMOBILE and motor truck registrations in the United States reached a total of 17,591,981 at the end of 1924, according to the Bureau of Public Roads of the United States Department of Agriculture. At the present time there is one motor vehicle for every 6.4 persons, one passenger car for every 7.3 persons and one motor truck for every 69.0 persons.

The reports received from the forty-eight states show a net gain in registration of 2,501,045 for the year or 16.6 per cent. Passenger cars increased 14.7 per cent in number while motor trucks increased at more than double this rate, or 32.9 per cent, indicating rapid development of commercial use of the highways.

The greatest increase in total registration is shown in the South Atlantic group of states where the increase was 21.5 per cent, while the minimum is shown in the West North Central group amounting to ten per cent. The total gross receipts from license fees amounted to $225,492,000. Of this amount $184,393,000, or eighty-two per cent, is applicable to highway work under the supervision of the state highway departments.

Following are registration figures for the leading five states and some of the eastern states:

State	Total registration	% increase during 1924
California	1,319,394	19.9
Connecticut	217,227	19.5
Delaware	35,136	17.2
Dst. of Columbia	88,762	18.6
Illinois	1,119,236	15.5
Maryland	198,398	17.2
Massachusetts	570,578	18.9
Michigan	867,545	18.7
New Hampshire	70,932	19.0
New Jersey	504,217	17.0
New York	1,412,879	17.3
Ohio	1,241,600	16.1
Pennsylvania	1,228,587	17.7
Rhode Island	95,482	25.1
West Virginia	190,734	20.8

The Improved "Ri[ding]" Walking Cultivat[or]
Superior to any Riding Cultivator on the market, BECAUSE they cut ALL the grass between the shares, leaving no hard ridges.
Kill All the Wee[ds]
They cost less than ONE-HALF as much as a good Riding Cultivator. They do much BETTER work, yet will give THREE TIMES as many years of satisfactory service. Send for Catalogue.
If you can not buy them of your local dealer we will ship direct.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

ABORTION.—During the past four months three of my cows have calved from one to three months too early. Another one of my cows lost her calf, but this happened last year. Another trouble we have is getting our cows with calf. Several of them have been served three different times, but fail to get with calf. Our cows are well fed and seem to be healthy. I have no bull, but my neighbor keeps one, he has five cows and every one of them had healthy calves. My cows were served by his bull, but I am told his cows were served first, before the bull came to my farm.—J. G. B., Ellicott City, Md. You have been feeding your cows a balanced ration and the food was of good quality, therefore, I do not believe it caused your cows to miscarry. It is not always an easy task to tell how contagious abortion is brought into a herd; however, it is most often brought into a dairy by purchase of an infected female, and not by the service of a bull. A sequel to infectious abortion is shy breeding. If your cows have no vaginal discharge, breed them until they get with calf. To correct vaginal discharge, mix one part lysol with sixty parts water and flush vagina daily.

NASAL CATARRH—DISEASED MOLAR TOOTH.—Tell me what I can do for a horse that has catarrh affecting one nostril, pus or thick mucus runs from it nearly all the time and it has a bad odor.—H. G. M., Souderton, Pa. If you will examine his mouth, you will find the fourth upper molar (grinder) tooth ulcerated, especially its roots, that's where the discharge comes from. Usually after the diseased tooth is extracted the discharge lessens and in many cases ceases. Give him one dram of powdered sulphate of iron in ground feed twice a day.

WORMS.—We have a female dog two and one-half years old that acts peculiarly at times. She will suddenly start to run, bark or howl as if in pain, then hide from us until she recovers. This is the third dog we have owned which acted as I have mentioned.—J. A. D., Mayport, Pa. Doubtless they have what is called "worm fits;" the worms seems to cause nervousness. Give twenty or thirty drops of equal parts fluid extract of spigelia and senna in the morning before she has been fed. Give her a dose once a week for three weeks, if you believe it necessary.

STRONG MILK.—We have a cow due to freshen in about four and one-half months. Two weeks ago she had an attack of indigestion, with loss of appetite, but she has seemingly recovered from it. She eats well and has about the usual flow of milk. When milk is first drawn it seems all right, but after standing for a few hours it has a very offensive odor and a bad taste.—E. F., Montgomery County, Pa. Clean hind quarters of cow, also clean udder before milking. It is also important for the milker to have clean hands and use nothing but clean milking utensils. Your cow stable should be kept very clean and be supplied with fresh air.

PARALYSIS OF THROAT.—I have been a reader of your paper for many years, and have never bothered you until now. About ten days ago my cow was taken sick, ate her feed all right at night, but refused to eat in the morning. Her tongue hangs out of mouth and she does not seem to suffer pain. Had three different veterinarians examine her, one used a probang, as he thought her choked; he also found one tooth missing. She is twelve years old.—B. G., Gloucester County, N. J. The writer is unable to make a diagnosis in this case.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Strong bones–swift growth

Chicks fed on Ful-O-Pep Chick Starter live and grow —*for the nutritious oatmeal base plus the cod liver oil content means sunshine every day, rain or shine*

Every poultry raiser knows the uncertainty he faces each season with every brood of early chicks—the possible, even probable loss of ten, twenty, up to fifty per cent.

Last winter and spring, on every side, you heard the constant complaint of farmers and poultrymen everywhere—"a bad season for chicks."

Yet on thousands of farms where Ful-O-Pep Chick Starter was fed to baby chicks, the losses were less than 3% and as low as 1%—a total saving of millions of chick lives.

Season, weather, climate could not wipe out these chicks—for Ful-O-Pep Chick Starter, made of an oatmeal base with the cod liver oil compounded right into it, provided *six solid weeks of sunshine* fed right into bones and tissues.

Throw out uncertainty—don't depend on luck

Read what these users say of Ful-O-Pep Chick Starter, in a notably bad season:

March 29, 1924

During the past sixty days we have batched and brooded for ourselves about thirteen hundred chicks, all of which have been fed exclusively on Ful-O-Pep Chick Starter and at this time we have not lost to exceed two per cent. We can heartily recommend the Ful-O-Pep line of feeds to anyone wishing to make the most out of poultry.

Fox Poultry Farm, by J. C. Fox, Prop., Houston, Texas

To Whom It May Concern: July 9, 1924

It is a genuine pleasure to testify to the splendid results we have had through the use of Ful-O-Pep Feeds. During the past five years we experimented with various feeds and checked the results we achieved from them as compared with those from Ful-O-Pep. Now that we are through experimenting, we have become fully convinced that the only way is the Ful-O-Pep Way. Experience again has proven the best teacher.

You will be interested to know that we have had exceptional success with your new Chick Starter, containing cod liver oil, to which we attribute the very small mortality among the young chicks, less than two per cent in a flock of 2800 chicks. Your claim that it would reduce leg weakness to a very great extent was fully substantiated by the success we had.

I wish also to state that we had pullets laying when they were three months and twenty days old and the yearly egg production has been all that anyone can desire.

I cannot help but feel enthusiastic about your feeds and I am sending you this testimonial to instill the same interest in others who have not yet become Ful-O-Pep boosters.

Mrs. James Brophy, Douglasville, Pa.

There's a reliable dealer somewhere in your neighborhood who sells the complete Ful-O-Pep line. If you haven't his name, ask us for it, or mention your regular dealer's name when you mail the coupon below.

The Quaker Oats Company

CHICAGO, U. S. A.

FREE–Ful-O-Pep Poultry and Record Book

Containing 52 pages authoritative instruction on poultry raising and all the essential points contained in our famous correspondence course. Send the coupon.

FUL-O-PEP CHICK STARTER

A Product of The Quaker Oats Company

Feed Ful-O-Pep Chick Starter first six weeks, for strong bones and swift growth

Feed Ful-O-Pep Fine Chick Feed from second to sixth week

Feed Ful-O-Pep Growing Mash from sixth week through five months

Feed Ful-O-Pep Coarse Chick Feed from the sixth week to the fifth month

Begin feeding Ful-O-Pep Egg Mash at fifth month and feed all year round

Feed Ful-O-Pep Scratch Grains from sixth month on—one quart per day to each twelve birds

CAMBRIA FENCE

A Bethlehem Product

CAMBRIA FENCE is a Bethlehem product—made in our Cambria Plant (formerly Cambria Steel Company) to the high standard of Bethlehem quality.

More than 65 years of experience in steel making and manufacturing iron and steel products are behind this wire fence. The steel used is a selected grade, especially suited to fencing—clean steel wire, springy, strong, full gage, and heavily galvanized.

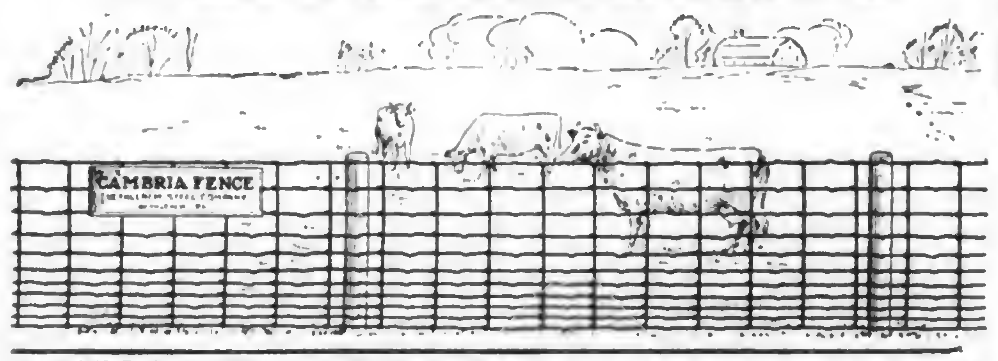
Woven wire fencing has been made at Cambria Plant for many years. When you buy CAMBRIA FENCE, you buy uniform construction, uniform quality, and uniform long life in fence.

Ask your Dealer for CAMBRIA FENCE. There is a style to meet any requirement of the user of field fence.

Other Bethlehem Wire Products include: Fence Staples; Wire Nails; Barbed Wire; Plain Wire; Galvanized Wire; Bale Ties; Barbless Twisted Wire.

BETHLEHEM STEEL COMPANY, Bethlehem, Pa.

BETHLEHEM



CYANOGAS
(REG. U. S. PAT. OFF.)
CALCIUM CYANIDE
Kills Wood Chucks

No need to be discouraged if you can't keep ahead of the woodchucks on your farm by hunting and trapping. Cyanogas (Calcium Cyanide) will exterminate these pests at a very low cost to you, and do it thoroughly and quickly.

A heaping teaspoonful of Cyanogas (Calcium Cyanide) placed in each burrow will destroy the woodchucks in that burrow in short order. Cyanogas (Calcium Cyanide) on coming in contact with air gives off hydrocyanic acid gas. The woodchucks, quick as they are, cannot dodge it and are killed by the fumes.

Your dealer has Cyanogas (Calcium Cyanide) or can get it for you. Or, we will deliver a 5 lb. tin sufficient to kill all the woodchucks in 80 burrows for $2.50.

Send for free leaflet No. 5-1 which gives full information.

AMERICAN CYANAMID COMPANY
of Delaware
511 FIFTH AVE. NEW YORK, N. Y.

Pleas Mention Pennsylvania Farmer When Writing Advertiser

Experiences with the Radio

We'd Surely Miss Ours

First Prize

TO THE Editor:— I am a farmer's wife and live on a large farm, about seven miles from the city of Lebanon. We can enjoy the radio programs as well as the city folk. We have a five-tube set and like it very much, altho we do get static, sometimes. But then, I think everybody does. My husband says that he would not be without a radio set. We have had it about four months and have heard many useful and interesting things.

We had never dreamed that anything like radio could be possible. During this winter when the roads were so bad we couldn't go to our own church, we listened in on the radio, and heard some wonderful and inspiring sermons. One Sunday morning we heard a Presbyterian minister in Pittsburgh. He spoke on "pie crust" resolutions. At first, it seemed rather funny to preach about a thing like that, but he knew what he was saying. He said that too many people are like pie crust, some tough, some soft, etc.

One Sunday Program We Enjoyed

One Sunday afternoon, we heard services, which we all enjoyed, broadcast from the Episcopal Cathedral in Washington. After we came home Sunday morning from church, we listened to a sermon from Pittsburgh. In the afternoon we heard from Wanamaker's Sunday School, Philadelphia. After that was over we got the Federation of Churches from New York. From there we switched over to Brooklyn and got the Men's Conference. Music was furnished by five girls called the Gloria Trumpeters. They surely are worth hearing.

We listen in every evening. We have a loud speaker, so everyone can hear. I think the older folk around our place enjoy it better than the youngsters. The following are some of the cities which we have heard from, and which I think broadcast good programs: New York, Washington, Detroit, Atlanta, Ga.; Cleveland, Cuba, Newark, N. J.; Schenectady, Norfolk, Va.; Lansing, Mich.; Louisville, Ky. The most distant stations we heard from are Havana, Cuba; Kansas City, Mo.; and Waco, Texas.

Heard the Inaugural Address

On March 4, we heard Mr. Coolidge take his oath and give the inaugural address. One of the men talked into a microphone and told us everything that was happening. He even told us what the President and Mrs. Coolidge were wearing. I think we could hear it better than if we had been there, because then we would not have been able to get near the place. It was almost like seeing it. I think that was an event that we shall long remember.

I could keep on writing abou many more experiences with radio because the air is full of music, bu it's about time to stop.—Mrs. G. W B., Lebanon County, Pa.

Men Set the Pace

GOVERNMENTS, like clocks, go from the motion men give them; and as governments are made and moved by men, so by them they are ruined, too: wherefore governments rather depend upon men, than men upon governments. Let men be good, and the government can't be bad; if it be ill, they will cure it: but if men be bad, let the government be ever so good, they will endeavor to warp and spoil it in their turn.—From William Penn's Preface to his Charter to the people of Pennsylvania, April 25, 1682.

Not Exactly Fans But-

Dear Editor:—We are not exact radio fans, but still, we listen pretty often. We have only a on tube set, but we have picked up lot of stations with it. We haven' kept an exact count, but they numb somewhere between fifty and seven ty-five stations.

We are farmers, and the weath reports, the market and healt talks, and the weekly Sunday scho lessons interest us most. We al enjoy the good musical progra especially the good old songs an old-time hymns. When the road and weather are bad on the Sabba we listen to two or three sermons.

From Far Away

The most distant stations we hav heard are Denver, Colorado; Fo Worth, Texas; Atlanta, Georgia Springfield, Massachusetts; Mo treal, Canada. On March 4, we we highly pleased to hear the inaugu tion speech on economy. It certai ly elated us very much, but only f a few days. We were thunderstruc when we learned that ten or fiftee minutes previous to his taking th oath of office, the President had sig ed the salary grab bill.

But, take it all in all, the rad is a great blessing to mankind, esp cially those of us who are old, a those on the farms who are aw from the towns.—J. C. W., India County, Pa.

"Listened in" on Orego

To the Editor:—We have a si bulb radio set with a loop aer We have heard sixty-six differe stations. The most distant one w Portland, Oregon. We also got a s tion in California. Our most int esting program was the inaugu address of President Coolidge, th most entertaining one was the Ne Year's celebration in Philadelphi Pennsylvania. We heard the ri ing out of the old year, and the rin ing in of the new. Then, too, the were the addresses of Mayor a Mrs. Kendrick. At one A. M., Ja nuary 1, 1925, we heard a very g New Year's celebration at Davenpo Iowa, and at two A. M. we heard th New Year's celebration at Portla Oregon, very clearly and distinctly.

Between Us We Like Everything

I like the musical programs bes my husband prefers the addres lectures and sermons. Just now are having fine lenten services twelve o'clock noon, with the sin ing of hymns. The Y. M. C. A. pr grams are very enjoyable. Th weather reports and time signa prove very valuable to us. We al enjoy the church services on Sund evenings, very much.

I always go to church on Sunda so I never get the chance to listen in the daytime. Once in four week I have off in the afternoon. Then never miss the services of the gr Federation of Churches in Ne York, and the Y. M. C. A. progr at Brooklyn, New York.—Mrs. E. T., Bucks County, Pa.

Radio a Great Thing

To the Editor:—It is very hard tell what is the most interesti thing we have heard over the radi Hearing David Lloyd George givi one of his famous addresses in En land shortly after his trip thru o country was a feat in itself a worth while. The funeral services

We Are Building a House

The Cellar Is the Real Heart of the Building—It Deserves Careful Planning

By HOWARD MITMAN
Northampton County, Pennsylvania

"EVERY tub must stand on its own bottom," and every house must have proper foundations. In our northern climate with its heaving frosts we must make our foundations with walls deep enough in the ground so Jack Frost cannot get beneath them and playfully uptilt what we have built. He will do it, give him half a chance.

A further consideration is the character of the ground on which we build. Very large structures are supposed to go down to bed rock with the foundations; but our smaller buildings on the farm are sufficiently protected if we have firm, solid earth for the walls to rest on.

A further precaution is to have the cellar walls considerably thicker than the walls they support. An excellent plan is to place a slab of concrete about a foot thick and extending six inches beyond the wall on both sides, in the bottom of the foundation trench and building your foundation wall on that. This is called a "footing" in building parlance, and make a firm broad base. It is advised that in clay these footings be wider than the measurements given.

It sometimes happens that a portion of the foundation trench is not satisfactory. One spot may be much softer than the rest of the trench, or a rock may be encountered, which is almost as bad. On the soft portion of the bottom of the trench the walls will tend to settle unevenly, causing cracks in your building. The same result comes if a rock prevents settling at one spot. The remedy is to excavate both the soft spot and the rock, until a proper foundation is reached.

All a Cellar Should Be

So far we have spoken only of a plain foundation with its base below frost line. But our house needs much more than that. We want a cellar. More than that, we want a good cellar and a complete cellar. The first thought of a cellar brings to mind a more or less attractive excavation—usually less—under the house floor, somewhat cooler in summer and warmer in winter than out doors, used for the storage of sundry belongings of the householder—fruits, vegetables, salt meats, canned goods, odds and ends. Even on that basis it is a very valuable adjunct to a house. But we propose to make the cellar much more than that. We plan to make it the heart of the house, in that all the various installations that will make for completeness will be located there.

City householders have a phrase "all the conveniences" when they describe what they consider a desirable house. Our "conveniences" will be in motion from the various installations in the cellar

To accommodate all that usually finds its way into a farm cellar, and at the same time have room for these newer but very desirable "contraptions," takes careful panning, but we believe we have done it.

Before going on with that part of the story we must return for a moment to the foundation walls. With a cellar under the building the foundation walls become the cellar walls, and must go down deep enough for that purpose. The trench should be dug so deep that the "footings" will support the sides of the concrete floor, thus sealing the whole thing.

When our old house was built, sixty years or more ago, lumber was plentiful and so a mighty girder was stretched across the cellar lengthwise, to support the joists of the floor above. This girder is eighteen inches square in cross section, and more than thirty feet long. It would puzzle us to find a stick like that in our woodlot today.

In place of this girder we will build a solid concrete wall, a "bearing partition," as it is called, to support the joists and to divide the cellar space into two equal parts. After the joists are in place the space between them will be filled with concrete to make the partition quite tight, so neither dust nor possible vermin can get thru. Every partition wall in the cellar will be built in the same way.

The Faithful Dog, Man's Best Friend

THE following is a plea which Senator Vest once made before a jury when a case involving a dog was being tried. It is said that spectators and jurymen broke down and wept. It is needless to say he won the case.

Gentlemen of the Jury: The best friend a man has in this world may turn against him and become his enemy. His son and daughter that he has reared with loving care may become ungrateful. Those who are nearest and dearest to us, those whom we trust with our happiness and our good name, may become traitors to their faith. The money that man has he may lose. It flies away from him when he may need it most. Man's reputation may be sacrificed in a moment of ill-considered action. The people who are prone to fall on their knees and do us honor when success is with us may be the first to throw the stone of malice when failure settles its cloud upon our heads. The one absolutely unselfish friend a man may have in this selfish world, the one that never deserts him, the one that never proves ungrateful or treacherous, is the dog.

A man's dog stands by him in prosperity and poverty, in health and in sickness. He will sleep on the cold ground, when the wintry winds blow and the snow drives fiercely, if only he may be near his master's side. He will kiss the hand that has no food to offer, he will lick the wounds and sores that come in encounter with the roughness of the world. He guards the sleep of his pauper master as if he were a prince.

When all other friends desert, he remains. When riches take wings, and reputation falls to pieces, he is as constant in his love as the sun in its journey thru the heavens. If fortune drives the master forth an outcast into the world, friendless and homeless, the faithful dog asks no higher privilege than that of accompanying him, to guard him against danger, to fight against his enemies; and when the last scene of all comes and death takes his master in its embrace and his body is laid away in the cold ground, no matter if all other friends pursue their way, there by his graveside will the noble dog be found, his head between his paws and his eyes sad, but open in alert watchfulness, faithful and true even to death.

A Fuel Room Partitioned Off

From the eastern half of the cellar a fuel room is partitioned off, at the north end, about eight feet wide, leaving the remaining space twelve by twenty-four feet for a fruit and vegetable storage room. From the other half, and adjoining the fuel cellar, a heater from twelve by twelve feet is taken, and the remaining space, twelve by twenty feet will accommodate the other utilities—the water supply, dumb-waiter shaft, light plant switches, cellar safes and laundry. By proper arrangement all will find room. A smooth concrete floor will cover the whole cellar.

We plan to have the main floor of the house two feet above the ground immediately around the house. If the cellar is seven feet deep, this leaves the cellar floor five feet below the ground.

This is good as far as it goes, but we propose to go a step farther. In the kitchen will be installed a dumb-waiter to carry loads of edibles to and from the cellar. Instead of stopping at the cellar floor the dumb-waiter shaft will extend four or five feet deeper. It is remarkable what a difference even two additional feet make in cellar temperature. The cooler air will always settle in the lowest spot, and such a dumb-waiter pit four feet or more deep will be, to all intents and purposes, an iceless refrigerator.

Many persons are troubled with water in the cellar. The walls and floor are porous and the great pressure without forces ground water in and a damp, unhealthy condition results. The land we expect to build on, while well drained, has a high water table and we must provide against the entrance of water where we do not want it.

Our plan is to lay tiles all around the walls near the foot on the outside to lead off as much as possible of the water that might find its way in; and also to make a sub-floor drain. To do the latter we dig the cellar at least one foot deeper than the finished floor is to be. A drain is laid hence to the outside and the space is filled with small field stones on which a layer of concrete about two inches thick is spread. This is covered with tar paper and additional tar is spread on. Finally a two-inch layer of concrete is spread and the floor finished.

Taking Every Precaution

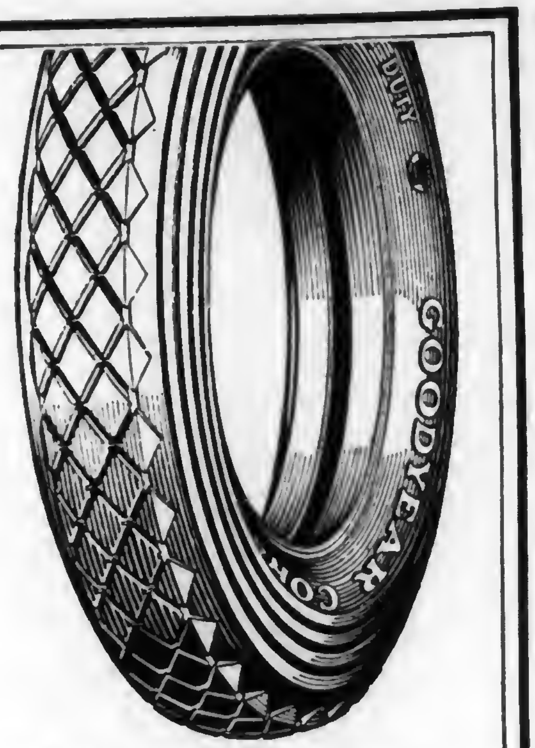
The sub-floor drain is entirely distinct from the cellar drain which is intended to dry the floor. The pit for the dumb-waiter will be lined with copper carefully soldered so no water can get in from any source.

These precautions we believe sufficient to insure us a dry cellar under our conditions. If we believed water might still be forced in thru the walls, we would water-proof them. To do this it is necessary to excavate the cellar at least four feet longer and wider than the wall requires, to enable a workman, after the forms are removed, to put on a coat of waterproofing plaster on the outside. The simplest form of this is about ten pounds of hydrated lime mixed with each bag of cement and formed into a plaster mortar with sand and water. Or, mixing the same percentage of hydrated lime with all the cement when building the wall will also do the trick. To make still surer you can also paint the walls with tar.

As the cellar walls are being built the necessary pipes are laid in; pipes for bringing in water and for leading out waste and sewage; a pipe for bringing in the underground lead cable that carries the electric current from the generator several hundred feet away; a pipe for gas; and possibly another for the telephone wires. There will also, of course, be an outside step to bring supplies and take out ashes and other detritus.

Not a part of the cellar, certainly, but a part of the ground work we must do, will be the septic tank located as close to the building as is advisable—within ten feet, at any rate. In our planning we are grouping things as

[to page 27]



Goodyear HEAVY DUTY Cord Tires, for passenger cars, buses and trucks, are available from Goodyear Dealers in the following sizes:

30 x 3½ (Cl.)	34 x 4½ (S.S.)
32 x 4 (S.S.)	30 x 5 "
33 x 4 "	33 x 5 "
32 x 4½ "	34 x 5 "
35 x 5 (S.S.)	

For those who desire balloon tires Goodyear makes a complete line, including the HEAVY DUTY type in certain sizes.

BAD roads needn't bother you, if you use the new Goodyear HEAVY DUTY Cord Tire. It's built to stand a world of punishment. Stronger, heavier, more massive all through. The powerful supple carcass made of the superior new cord fabric SUPERTWIST. The sturdy sidewalls reinforced against rut-wear. A great tire, and a great value, for the man whose driving calls for extra stamina! Does yours?

Goodyear Means Good Wear

You Buy Feed for Just One Purpose:

To make milk at the lowest possible cost

■ ■ ■

YOU should not *guess*—you should *know*—that your monthly feed bill is being kept down to the very last penny.

How *can* you *know?*

Do this:

1. Weigh feed and milk, for just one day, to find out how many pounds of milk you are getting from your present grain ration.

2. Figure your present grain cost of producing 100 lbs. of milk.

3. *Then feed Unicorn* for a month, taking six days to make the change of feed.

4. Weigh feed and milk again and figure cost of making milk with Unicorn.

5. Subtract your smaller Unicorn cost from your larger former cost.

6. The difference will be enough to convince you that Unicorn actually does produce milk at lowest possible cost.

7. And that's exactly the purpose for which you buy feed for your cows.

For a two-cent stamp we will send you one of our new slide rule Milk Cost Finders. Gives cost of making 100 lbs. of milk at all prices for feed.

Or get one free at any Unicorn feed store.

CHAPIN & COMPANY

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

THINGS are going strong at Neshaminy Gardens now. Also, there is a joy and satisfaction in our home that we have not experienced for several years. Both these statements can be explained in a very short sentence: Our Son is at home. After spending the seven years since finishing his schooling in teaching and business, he has obeyed an ever-growing impulse to get back to the land and is now on the job, and in the firm conducting Neshaminy Gardens. The excuse for intruding so purely a personal matter here lies in the fact that the quitting of a city job at a good salary is an unusual proceeding for a young man in these days.

✣ ✣ ✣

WHEN the footsteps of so many young men are being directed towards the city, a process which has been going on for several years, a young man who makes a move in the opposite direction almost may be considered a pioneer. At least it requires the stuff of which pioneers are made, namely, faith, hope, ambition, and a love for the open spaces. Of course, we used no arguments to persuade him in his decision but we rejoice in it. Was it a wise move on his part? Time alone will tell. But of this we are sure: It will depend upon the kind of stuff in him. Some say he was foolish, but I have little sympathy with that class of farmers whose pessimism about their own business makes the atmosphere around them as blue as indigo.

✣ ✣ ✣

IT TAKES a good many things to equip a truck farm, even if the number is limited to the primary essentials. Up to the present we have purchased a field tractor, a garden tractor, a low-down wagon, plow, harrow, disc, sprayer, a half-ton truck, and a number of hand implements. The field tractor and plow were delivered, set up and started on April first. In spite of the date they proved to be everything that could be desired. The tractor has ample power and the plow turns as nice a furrow as I could ask and my standard in that regard is rather high.

✣ ✣ ✣

AFTER proving the tractor out at the plow we backed it up to a low down wagon and hauled manure the vegetable ground. Next we hit ed it to the disc and disced the or ard and asparagus ground. The la ter will be plowed at once to ma ready for planting. Our equipm looks, at this time, as if it wo enable us to do practically eve thing. It is possible, however, that horse may be necessary for kinds of cultivating, especially w plants are small.

Since making the statement a weeks ago that it was our plan try to do without assuming the pense of keeping a team all the for a few weeks' work quite a number have written asking for ther information about the Many people have a few acres w they wish to farm, and yet the of either owning or hiring horses a barrier. As a matter of fact whole subject is in the format period. There is no question but th a tractor on farms of a size and where a team or two is required addition is an economical mach We are being forced as a matter economy into adopting power chines on the farm wherever sible. But whether machines of size and type have yet been perf so that smaller farms can be oper without any horses is yet to be out. We are willing to be pion in this attempt at Neshaminy dens and we shall try to be perf frank and honest in discussing success or failure as times goes

✣ ✣ ✣

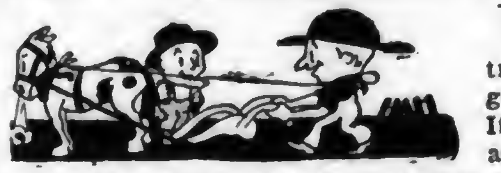
AN 800-foot row of Gradus was planted on April fourth. The was cold and very moist. Whe they come up or rot in the gr depends upon the kind of weather next few days. Peas will stand siderable cold weather after come up, but the wrinkled vari rot more easily than the sm kinds. We covered them very l ly so that the sun would up the ground. More soil will pulled on after they start to up. The Gradus variety is one the very best early, wrinkled but they require an abundance plant food to bear heavily. Wit it, they will not fill the pods peas.—R. P. K.

Ascum—I see there's some tal having the people vote at the state election upon the question abolishing capital punishm Would you vote to abolish it?

Fogle—No, sir; capital pu ment was good enough for my cestors, and it's good enough for —Washington Star.

THE CHEERFUL PLOWMAN

Building Up Pete



WHEN Pete had been with year and proved himself trusty, I said, "Now Pete, your m gear must not get clogged and r If you just live and serve your and draw your breath and wages men have done in every clime thru all the passing ages, you'll lose freshness, pep, andg o, become a spineless 'feller,' much like a that tries to grow in springtime in the cellar. You must become a ma parts, do something quite unaided, or in the game of life and h you'll soon be badly shaded. I have a plan prepared for you to build itiative, a plan where everything you'll do will be indeed creative:

"Suppose you take that strip of land that's fenced and now in stub put in a crop and try your hand, and shoulder all the trouble. I'll you drills, and plows, and drags, I'll loan you cart and binder, and s charge you for my nags, and that as a reminder. I'll also give you si sheep, two hens, and my old mooley, and rent you pasture very cheap do yonder by the coulee. You must plan all your crops yourself, your sel and your buying, and tho you make no sign of pelf you'll profit in trying. You'll live with us just as before and work for honest wages, in life's book you'll scribble more live items on the pages!"

"That plan," said Pete, "is long and wide; I'll try it out, don't wo I'll build up something on the side and do it in a hurry! I'd gladly right here with you and save as I am earning, but how to push one's canoe is surely worth the learning!"—J. Edw. Tufft.

Vol. 91, No. 16. Phila., Pa., April 18, 1925 Whole No. 1457

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Most of the shadows of this life are caused by standing in our own sunshine.—Emerson

The Hen Story

AS WE expected, some people blamed us for the figures given in the story of the 1000-egg hen published two weeks ago. In spite of our statement that we were quoting the air-castle of words prepared by another it was not clear to careless readers. It is another incident showing that the average reader does not read carefully.

It's an Outrage

THE Pennsylvania Legislature, we are told by city newspapers, isn't disposed to appropriate the full amount needed for the support of the State Police because those officers of the law have been hindering the legitimate commercial activities of certain estimable citizens of the Commonwealth. The State Police, we are informed, have actually gone so far as to interfere with the business of certain highly respectable, hard-working bootleggers.

It is a fine state of affairs if a bootlegger cannot do an honest day's work without the fear that an officer will butt in and put him to a lot of trouble and annoyance. The State Police really seem to believe that the prohibition law was intended to be enforced. We suggest that the authorities draw up a set of rules for their benefit, showing which laws they are to try to enforce and which they are to ignore. This interference with the bootlegger's business must be stopped.

The Harrisburg Situation

AFTER one of the worst fights in the legislative history of the state, the General Assembly at Harrisburg seems to have returned to a condition somewhat akin to sanity. The Conference Committee, appointed to work out a schedule of appropriations that could be approved by both houses, has agreed upon a plan that follows quite closely the outlines of the budget originally submitted to the Legislature by the Governor. This conference schedule makes provision for most of the items in which farmers were particularly interested. However, the sum of its many items is greater than the estimated revenue of the state for the next two years. So the Legislature will dump the whole thing on Mr. Pinchot's desk and let him prune it until the total can be covered by the funds in sight.

Home Entertainment

IT IS not a great many years since the rural village, large or small, was the central gathering place for everybody in the community. The whole countryside gathered frequently in the local center for religious, educational and entertainment activities. Trading was done there and people met at the mill and blacksmith shop for social intercourse.

But the old-timers in these villages tell us that customs are fast changing, due to good roads and the automobile. The larger towns which heretofore were out of reach are now within a few minutes' drive and people hop into their machines and go many miles away for entertainment and to make purchases. We wonder whether people are not going to extremes in this practice. It will be a sad mistake to neglect the home affairs and institutions and allow them to die out for lack of patronage and attendance. People need good nearby stores but they must have buyers to succeed. Rural communities need churches, but they must have supporters and attendants. The mills, the blacksmith shops, the feed dealers and the farm machine salesmen are all important and are needed close by.

But more important than all these reasons is the fact that people cannot afford to make frequent long trips on trivial errands even if they have machines and good roads. Nor can they afford to let their own abilities for making their own entertainment and social atmosphere atrophy by dropping their own activities and paying professional entertainers to amuse them.

The Giant Power Plans

THE plans for developing electrical power in Pennsylvania as worked out by the commission and known as the Giant Power project are being attacked by the existing private power companies. The engineers attached to these companies are bringing forth many arguments to prove that the Giant Power plans are not feasible and would work grave injury to capital already invested. This opposition, it seems to us, is an argument for the serious consideration of the subject by the whole people. The development of the power making forces of the state must be allowed to be carried on along lines best adapted to the promotion of the public good. The transmission of power will soon be considered as necessary to modern life and business as mails and transportation. If the power companies do not or will not see their opportunity and their duty in this direction, it will become necessary for the public to take forcible measures to compel it.

Health and Prosperity

"THE city is no place to raise a family." This expression and others like it are heard so frequently that most of us have come to believe a child born in a big city doesn't have much of a chance to survive. But now the American Child Health Association comes along with statistics showing that the death rate among babies in the rural districts of Pennsylvania, New York, New Jersey, Delaware Maryland and a few other states is slightly higher than in the cities of those states.

While the city health authorities have reason to be proud of their ability to overcome the natural handicaps of the congested centers of population, these facts are somewhat disquieting to country people. Judging by the report of the Child Health Associati what the country needs is better informat about hygiene, more community nurses, m septic tanks, more tuberculin tested cows, more home conveniences to lighten the l of work carried by the average farm mot But, to mix economics with a discussion child health, the greatest need of all is the producer to receive a larger share of consumer's dollar. Health and prosperity together on the farm as well as in the city

Farm Land Values

MANY people are coming to the belief t the farms of the nation are over-capi ized. This means that the actual and estim ed value of farm lands is too high and is warranted by the average income per a This over-valuation finally finds its way the assessor's book and as a result the ta are out of proportion to the income from farm. The rental value of city property i more certain thing and the market value such property is based upon its actual or tential returns. So far the price of f property has never been based upon income produced, but is arrived at by w the owner and the buyer secretly believe is speculative value. The question often as but never answered. "Why has the price farm land advanced practically seven per per year for the last fifty years?" needs s honest and intelligent investigation.

Cooperation Approved

THE leading business men of the na have come almost unanimously to lieve that sound business cooperation on part of farmers is a necessity for everyb Of course, there are some business men see in cooperative movements of farme danger to their own personal business, the men who look at the subject in a br way realize that farmers must follow the of men engaged in other lines of business a letter sent by President W. C. Gordon the American Bankers' Association, to thirteen thousand members we find the lowing paragraph

"The farmer today finds himself far moved from his consumer-customer by a l line of intermediate agencies, which of leave him in a position of disadvantage as individual producer. It is, therefore, strange that he should seek to apply to a culture those principles of production and tribution found successful in industry. rightful ambition is to make, where feasi a general application of successful busi experience to the marketing of agricultu products. Commanding the best econo thought of the business world, agriculture doubtedly stands on the threshold of a era. In lieu of fantastic panaceas, agricul al welfare—which after all is the nation's fare—has need of a sane, long range prog that is at once practical, constructive, economically sound."

Washington Letter

FOR THE PROTECTION OF OR ARDS.—The chemical warfare service of U. S. Army last year spent $25,000 in try to develop insecticides especially efficien the control of the boll weevil. Much at tion is being given to the development of paratus for dusting field crops with army planes.

Recently the army specialists in coop tion with the Department of Agriculture m experiments in the Maryland orchard sect with a smoke screen spread by airplanes ing over orchards to prevent frost dam They have not yet been able to develo screen that will hang over an orchard night, but hopes are entertained that su

screen will be developed soon. It thought that with a fleet of planes spreading a smoke screen er large orchard sections, frost in- ry could be prevented much more onomically and efficiently than by e present smudge-pot system.

TARIFF BATTLE BREWING.— e tariff question will be reopened the next Congress if certain oups of manufacturers can have eir way. They want higher duties the goods they manufacture. How- er, the friends of protection may ve opposing them not only the uthern free traders and importers t the big financial group, who are sisting that we must import larg- r quantities of commodities pro- ced in foreign countries to enable e countries of Europe to pay their terest and debts to this country. hile the protectionists may be able hold the tariff rates at the present el, it is not thought probable that th the pressure of the financial in- erests for swapping debts for com- dities, that there will be any in- ease in tariff duties.

ANOTHER FARM RELIEF BILL. —A new cooperative marketing bill s been drafted by Congressman ckinson, of Iowa, the farm bloc der on the House rules committee. will be submitted to all agricul- ral organizations for study and ggestions with the expectation, at st on the part of Representative ckinson, that he may be able to centrate the influence and sup- rt of all the farm interests behind as a simple, comprehensive farm lief measure to be pushed for en- tment in the next congress. A can- ss of farm organization repre- ntatives, however, leads to the con- usion that the Iowa congressman is mewhat over sanguine as to the obable unanimity of opinon con- rning his bill. One farmer leader, ter reading it, pronounced it an workable combination of legisla- ve hash. The new scheme is a com- ination of the Dickinson coopera- ve marketing bill and the old Mc- ary-Haugen export corporation bill.

ARMY MAN TO LEAD WAR ON OOZE.—Bringing prohibition en- rcement under one directing head, is believed, will tend to more ef- ctive law enforcement. The pro- ibition unit will function as hereto- re in the Internal Revenue Bur- u, but General Lincoln C. Andrews, e new assistant secretary of the reasury, will have control of all gencies entering into the task of aking effective the enforcement w. General Andrews is an army ficer of long experience, and is aced in charge of customs and the ast guard as well as of the pro- ibition unit. With this combina- on, it is believed, he will be able wage a drastic campaign against mugglers, bootleggers and all other wbreakers who disobey our Inter- al Revenue laws.

MAY CURB POLITICAL MED- LING.—It is thought that with eneral Andrews in full charge ere will be less meddling in en- rcement affairs by congressmen, nators and politicians of high and w degree. Under conditions that ve prevailed since the eighteenth mendment was enacted enforcement s been doubly difficult because of e activities of politicians with a ll.

PROTEST POSTAL RATE IN- EASE.—There is much dissatis- tion among the farmers in some rts of the country, especially the thwest over the service charge two cents for each parcel sent by rcel post, according to protests be- g received in Washington. The o-cent increase on all domestic ney orders and the increase of the imum registry fee under the new from [illegible] to fifteen cents on all ered mail are also ob- ected to by farmers who are large ers of these postal services. The ct that these increases do not ap- y to money orders and registered ail to foreign countries is looked on as a discrimination against our n people.

GRAIN EXPORTS ABOVE LAST EAR.—The U. S. Department of griculture has opened an office in ienna, Austria, with G. C. Haas, of ashington, in charge, to provide e Bureau of Agricultural Econom- s with reports and statistics of the rope and agricultural developments in the countries that formerly composed the old Austria-Hungary empire.

Exports of grain from the United States to Europe continue in larger volume than last year notwithstanding the exceptionally heavy shipments earlier in the season, according to Department of Commerce reports, the weekly shipments ranging from 1,600,000 to above 1,800,000 bushels.

WILL EXTEND RADIO WORK.—Secretary of Agriculture Jardine announces the appointment of Nelson A. Crawford, of the Kansas Agricultural College, to be director of information of the Department of Agriculture. The secretary expects to consolidate all the informational work of the department under one head. Director Crawford will have supervision of all informational policies which will include the work of the present office of publications and the press service. In addition he will direct the preparation and distribution of special information for radio broadcasting, a branch of informational work which Secretary Jardine is planning to extend.—E. E. Reynolds.

Harrisburg Letter

AGRICULTURE'S SIDE.—When results of the 1925 legislative session are cast up it will be found agriculture has fared probably better than most of the activities of the state government, altho it did not gain the foundation for a policy of prevention and research which has been urged for some years. The funds of the department go thru substantially as called for by the budget. The largest amount ever voted for indemnifying owners of cattle killed to prevent spread of tuberculosis has been voted, altho it now seems probable there will be nothing doing in the way of an emergency appropriation for warfare against pests and enemies of agricultural welfare. Unprecedented allowances have been made for education and highways and considerable legislation enacted relative to township government.

ROAD WORK STARTS.—Work has been started on more contracts for construction of highways than ever known before in Pennsylvania, dozens of firms having notified the State Highway Department of resumption of work or beginning of new operations. In several instances county work will be conducted in conjunction with the state and it is now the hope to make a record for new mileage opened to travel in the fall. The state will open bids for over seventy miles of road in the next month, lettings being set for early in May in addition to that for the end of this week.

READY FOR FENCES.—The State Game Commission is now ready to undertake the supplying of fences for protection against deer under the newly approved law, which provides for the state to pay a share of cost and to retain a lien on the fence if not paid for. Several inquiries have been made as to the plan to be followed and it is thought there will be advantage taken of the act this summer in southern counties.

RABIES TURNS UP.—The first outbreak of rabies of any consequence has appeared in the southern part of York County, where dogs have bitten a number of domestic animals and attention is being directed toward a quarantine. The outbreak is in a farming section.

MANY COMMISSIONS.—The legislature just closed is going to make a record for the number of commissions authorized, providing the Governor stands for them. Bills for at least twenty have been passed and the range is all the way from state of the insane to parole laws. The bill for continuation of the Agricultural Commission is among those passed.

MORE ROAD ROUTES.—Governor Pinchot's approval of the bill establishing over 100 new road routes on the State Highway system gives every county one or more except Philadelphia, which does not share in such arrangements. The problem will now be to finance the construction. The plan of continuing the special gasoline tax of 1923 as a means of providing some money has been given sanction, but that will not begin to build everything put on the map. Roads are a good bit like schools, say the legislators; the people want much of both, but kick on the cost.

TREE PESTS ATTACKED.—According to the reports of the state agricultural authorities very satisfactory progress has been made the last year in the campaign against various tree pests, such as the peach yellows and various diseases to which apples are especially heir. Cooperation has been established to a marked degree in several counties where there are large investments in orchards.

NEW BILL ON FRUIT.—One of the bills making progress in the final week of the session is one attracting much newspaper comment as it provides that persons taking fruit from the property of another will be guilty of larceny. Under present law fruit taken from a tree or corn from a stalk is not theft, altho until recently it was not generally known. The Norton bill would put a crimp in orchard raiders and generally protect farmers.—Hamilton, Harrisburg.

New Jersey Letter

ROADSIDE MARKET CONFERENCE.—Farm leaders gathered at the call of the New Jersey State Bureau of Markets recently to discuss the improvement of roadside markets in New Jersey. The idea of establishing a standard to be applied to the conduct of roadside markets was approved. The code discussed would require that seventy per cent of the commodities offered for sale were produced on the owners' farms, the fruits and vegetables to be sold in standard containers and under approved methods of sale. Farmers conforming to the standard will receive a certificate to be issued by the Bureau

WILL BRING FARM BILLS EARLY.—The joint legislative committee of the New Jersey Federation of County Boards of Agriculture and the New Jersey State Grange recommend to their membership the drafting of next year's bills well in advance of the meeting of the legislature. The plan, according to Dr. W. H. Whiton, chairman of the committee, will allow distribution of the proposed bills thruout the state, and the focussing of farm public opinion upon desirable legislation. It will also allow for the ironing out of any differences of opinion, to the end that the measures as introduced will have the united backing of farmers of the state.

MUTUAL INSURANCE GAINING.—The idea of the various County Boards of Agriculture for securing a saving to their membership on automobile liability insurance is gaining in favor. Thru arrangements with a reliable company, a special rebate in addition to the usual mutual premium can be saved by members, because country risks are not as hazardous as those in the city. The following counties have accepted the plan and offered their support: Gloucester, Cumberland, Cape May, Atlantic, Monmouth, Middlesex, Somerset, Morris and Hunterdon.

SMALLER POTATO ACREAGE.—Reports now available from principal producing areas indicate a state acreage in potatoes of 19,000 acres or less, as compared with approximately 29,000 acres last season. The use of certified seed is gaining ground and due to efforts of the farm organizations during the winter to focus attention upon proper grading and standardization, the promise is for a more uniform quality of table stock to appear on the markets.

EGG CONTEST NOTES.—The Bergen County egg-laying contest reports good records so far this season for the fowls entered. The production in the twentieth week of the contest gave an average yield of sixty per cent or to date 90,460 eggs. A New Brunswick poultryman leads the contest in the pen class with his Leghorns, and a Pennsylvania breeder holds first individual record with a Rhode Island Red.—B.

New York Letter

COUNTRY LIFE PLAYS.—Thru joint contributions from the State Grange, the G. L. F. Exchange and the State Farm and Home Bureau Federations four cash prizes are offered for original plays dealing sympathetically with country life. The plays may be long or short, may be tragedy, drama, comedy, or farce, but must be suitable for amateur production and winning plays are to be printed by the State College and produced without royalty. The prizes are, first $100, second $50, third $30, and fourth $20. A writer may submit three, but may win but one prize. The Rural Sociology Department at Cornell has charge of the contest, which has been staged because amateurs find so little really good material of this nature with which to work. The production of amateur dramatics has grown by leaps and bounds among the rural groups of the state since a state leader of rural dramatics has been available, and it has added immeasurably to the satisfying activities of rural life.

RURAL ELECTRIC SERVICE PROMOTED.—Another meeting of state executives of electric lines and of state specialists and the public service commission has been held in Albany in response to a growing demand for more rural electric lines. Rural people do want more opportunities to secure this service, but they also want the beauty of the highways and of home grounds and shade trees protected first. Too often in this state has the extension [illegible] destruction of trees and a denuding of small towns and highways.

PRIZES FOR ESSAYS.—The Dairymen's League [illegible] $700 to high school students [illegible] for the best thirteen essays [illegible] the League has helped [illegible] farmers of the state.

FARM NOTES.—Spring plowing is under way much earlier than usual, while maple sugar making is having a fine season. Prices [illegible] what better, except that cabbage [illegible] potatoes remain low.—M. C. F.

County News and Comment

Berks County, Pa.—Since the appearance of spring farmers made good use of all their time. Manure has all been hauled. Sod plowing almost completed. Plowing for oats about three-fourths finished. No oats sown. Most of the clover seed has been sown. The first spray of the apple orchards has been completed with lime-sulphur. Grass fields look good and most of the fields have been rolled. Wheat fields look healthy, having the right color, free from winter spots, and have a very good start. A carload of [illegible] seed [illegible] Granges at Reading where they were distributed to the different localities. Lime and fertilizers have all been unloaded. Good seed corn scarce.—W. N. M. April 9.

Centre County, Pa.—On the last few days of March we had wind and snow squalls. April, so far, has had beautiful weather except for one rainy day—cool nights with white frosty mornings and ice about the pump. Folks making early gardens. Some extra tidy souls are cleaning house but it is too cold to take down stoves and carry out the house plants. Much spring plowing has been done. Thousands of young tree seedlings furnished by the state for reforesting waste places, have been set out this spring and much interest is shown in the work. Most of the winter wheat does not look very promising. Work on the state road in the Bald Eagle Valley has begun this week both at Julian and at Unionville. Market quotations: wheat, $1.70; rye, $1.10; corn $1.20; buckwheat, $1.10; butter, 35c; eggs 16c; lard 22c; veal calves 10c lb.—A. April 8.

Clearfield County, Pa.—Roads have improved and motor travel is resumed. Lime, fertilizers and general farm supplies are moving forward. There is [illegible] and most of the complete goods carrying the three elements, while there are a few farmers who doubt the advantage of using any commercial food for their crops. Considerable plowing done for spring crops. Some have [illegible] plowed ready for corn. Good mature seed corn is scarce. Some inquiry for small quantities of seed potatoes. So far there has been no seeking for [illegible] hand. The average farmer seems resigned [illegible] his cropping to the plan [illegible] of himself and family [illegible] except eggs [illegible] and the delivery of milk [illegible] has dropped to [illegible] the growing [illegible] expected [illegible] hatching season [illegible].—H. W. April 1.

How Much Fertilizer?

How much fertilizer do you use for vegetables, radish, lettuce, cucumber, beet, etc.? I also want to know what kind of fertilizer you use for tomatoes. F. H. K., Beaver County, Pa.

If the ground is already in good physical condition a heavy application of manure will grow any of these vegetables successfully. That is, the manure may give enough plant food for any of these crops, but it would not in one year make over a hard, crusty soil into a mellow soil of the kind we all like to have for vegetables.

Twenty Tons to the Acre

A heavy application of manure, under present conditions, would be twenty tons to the acre. If you have no manure, you can still grow good cabbage, cauliflower, beets, radishes, snap beans, lima beans, sweet corn, and tomatoes with commercial fertilizer alone, if the land is mellow and well drained.

For any of these, except the beans, you can safely use a half ton per acre of a 4-8-6 fertilizer, or another mixture like it, and for the cabbage and cauliflower, if you wish the biggest and earliest crops, you could use up to a ton of this to the acre.

For the beans 600 pounds would be enough, and you would have to use great care to keep the fertilizer from touching the seed, as beans are easily injured in this way. On land that is already well manured you can get fair lettuce with fertilizer alone, but lettuce and celery seem to make better use of manure than some of the other crops, and on most northern soils are not fully successful without it, unless irrigation is available.

When Manure Is Scarce

If manure is so scarce that you wish to use fertilizers for some of the crops but not all, put the manure on the land for lettuce, celery, and seed onions, if you plant these, using fertilizer alone on cabbage and cauliflower. The tomatoes and sweet corn will benefit greatly if you can use manure moderately on them, say at the rate of ten tons to the acre, with 600 or 1000 pounds of fertilizer besides.

If your tomatoes are a canning crop, you can use ten tons of manure and a half ton of fertilizer, or if you have a clover or alfalfa sod to plow under, the fertilizer alone should give you a very good crop.—
—W. C. P.

Entering a New Field

Could you give me any information on raising tomatoes for a canning factory? What is normal yield? Is twenty-five cents for a five-eighths basket a fair price? What does it cost to produce an acre of tomatoes? Also would like some information on raising stringless green pod beans for canning factory. A factory expects to operate near here this summer. It is a new venture for this section and I would like some information before entering the field as a canning crops producer of either tomatoes or green beans. H. I. R., Carroll County, Md.

I cannot tell you what it costs to produce an acre of tomatoes, because your acre would not cost the same as mine, and average figures are not of much value. Labor costs vary, applications of manure and fertilizer vary, rent of land varies.

At the price per basket which you mention, I should not expect you make any real profit unless you r ceived at least sixty dollars for th crop on an acre, and this wou mean a yield of four tons to th acre. Yields above that amount not represent clear profit, of cour because there is extra cost of pi ing and hauling, sometimes co delays at the factory. The bett farmers, especially those who apply some manure besides u commercial fertilizer, expect not l than eight or ten tons every ye and yields up to fifteen tons are n unknown.

With a yield of ten tons to th acre the price you mention will gi you a fair profit, while if you ha vest only two tons from an acre, reasonable price will return a pr This year I feel that it is better accept a contract price of twen five cents and put forth special forts to get a high yield, than wait too long for a better contr price.

The Yield of String Beans

Of the string beans you can pect a yield of two tons to the a good growers get more than this, to five tons. It will take sixty bu els to make a ton. You must rem ber that the labor requirements the string bean crop are very gr over a short period, while with matoes the work is better distri ed. Men who start with more th an acre of string beans and no e help may find themselves swa during picking season. If your nery is prepared to attend to picking, you could plant a l acreage.

The beans are planted in thirty inches apart, part of the tilizer in the row and part broa Great care has to be taken get the fertilizer close to the A total of 600 to 1000 pounds of tilizer will do. Land reasonably from weeds should be used, b you cannot afford to do much ing in the rows.

The seed is sown with a planter or wheat drill, in the case enough openings being up to give the right distance be rows. It takes a bushel of seed an acre. Like all other beans, crop for the factory can be cult ed only when the leaves are otherwise the pod spot or anth nose disease is apt to ruin the vest.—W. C. P.

Whitewashing Trees

Kindly advise us as to some white solution we could use on trees instead of whitewash, something that will benefit the trees and will not wash off. What is used along state roads to whiten posts?—E. M., Elk County, Pa.

There is very little advantage, if any, in the common practice of whitewashing the trunks and main limbs of fruit trees. It certainly does not add to the looks of the home grounds, any more than a border of whitewashed stones along the walk makes the home grounds more attractive. These unnatural and striking effects are undesirable. Strive for natural, not artificial, effects in the home grounds.

Whitewashing the trunk is of practically no value in the control of insects and diseases. It does soften the bark somewhat, so that the trunk can expand more readily, but is not more beneficial than washing the trunk with soap suds, or the use of any of the standard dormant sprays. If, however, a durable whitewash is desired, the formula of the State Highway Department may be used: One peck stone lime, three pints salt, one quart kerosene.

It would not be safe to add the kerosene to a whitewash to be used on fruit trees, but the salt can be added to advantage.—S. W. F.

Plums Drop Before Ripe

I have two plum trees which are very nice and large. They are about ten years old. They blossom freely and have a number of green plums but when they are half their size they fall off. Those left are nice, big and delicious. They have rich soil and they are tall trees. I also have one pear tree which is about six years old and it doesn't have a blossom or a pear. There are two others near it that have the same care and seem to be the same kind; they bear about a bushel each of nice pears. I would like to know whether I could do anything for them or not.—M. M. S., Wyoming County, Pa.

Possibly the plums drop because of poor pollination. If so, planting near this tree another variety blossoming at the same time, or grafting one or two of its limbs to another variety would help, by supplying cross-pollination. It is more likely, however, that the trouble is due to insects or diseases, possibly the curculio, which stings the young plum, and lays an egg which hatches into a worm. The wormy fruits drop.

Spraying with arsenate of lead, one pound to fifty gallons of water, with at least two pounds of slaked quick lime added, is the preventive. The spraying should be done within five days after the petals fall, and again two or three weeks later.

May Be Late Fruiting Variety

This may be a late fruiting variety of pear. Some varieties of apples, as the Spy, do not come into bearing until ten to fifteen years after planting. Another possible explanation is that this tree is unfruitful because of excessive vigor. If this is the case it will have few blossoms, but make very heavy wood growth.

Girdling several of the larger limbs will check growth and induce fruitfulness. A ring of bark, about one-quarter-inch wide, is cut out around each limb spirally, down to the wood. This is done in early spring. The wounds should be healed by fall.

If, however, the tree blossoms full, but produces no fruit, you may suspect poor pollination, as indicated for the plum tree; or disease, especially the pear scab, which often kills the blossoms. The treatment is spraying with standard lime-sulphur solution, diluted one to forty, just before the blossoms open, and again immediately after the petals fall.—S.W.F.

Only Partial Relief

THE Haines Bill has passed the General Assembly. It provides for an open season on doe in districts where deer are damaging farm and orchard crops, with a license fee of $2.00. A farmer or fruit grower who can establish that he is damaged may shoot deer on his own property at any time of the year provided the deer have caused damage within thirty days. It is not necessary to actually see the deer browsing, as in the past. The carcass may be kept by the farmer only in those districts so designated by the Game Commission. The state will continue its deer fencing policy.

The Bonebrake amendment to the Wells Bill, which provides for money payment by the state for damages incurred by the depredations of deer, still has some chance for passage at this date, (April 7). It sets aside $100,000 a year for this purpose, of which $50,000 is from general funds and $50,000 from hunters' license fees.

Deer Are Property of State

There is precedent for this policy since the state has set aside $10,000 to pay for the damages to farm live stock by bear. The State Horticultural Association is committed to this policy—that the deer are the property of the state, hence the state should either prevent the damage, or pay for it. The Haines Bill does not recognize this principle, and the association will continue to press for its adoption.

Those who have given their time most freely to secure this partial legislative acknowledgement of the rights of the fruit grower are the committee appointed by the State Council of Agricultural Associations consisting of J. M. McKee, Deputy Secretary of Agriculture; C. J. Tyson, Flora Dale, and Miles Horst, Harrisburg; also the following members of the legislative and game committees of the State Horticultural Association: D. M. Wertz, Waynesboro; R. T. Crisswell, Chambersburg; J. A. Runk, Huntingdon; C. A. Greist, Guernsey.—S. W. F.

What Is Trespass?

"If a man enters a neighbor's apple orchard under suspicious circumstances at night and some of the fruit disappears is he guilty under the law?

"To the ordinary layman the case is clear, but legally there is a deep intricacy involved.

"The Berks County Court at the current criminal session, decided that only personal property can be stolen and that unpicked apples are regarded as attached to the land and, therefore, do not become personal property until they are picked. The prisoner was accordingly ordered to be released on the larceny charge. The case has aroused a great deal of interest among both the public and the fruit growers, as well as among cer-

Some Good Tips on Spring Feeding

The spring pastures will soon lure you into thinking that you have a new source of cheap feed. It will pay you to remember your past experiences and feed a good combination of feeds with your grass. You should buy a feed—not a tag. When you judge a feed solely by its analysis and price you may deceive yourself, but you can not fool the animal.

What the Tag Really Tells

State and Federal laws require all feed manufacturers to publish the minimum amount of crude protein, carbohydrates, fat, and maximum fiber contained in their products. They do this—on the bag and on the tag.

Some feeds may contain higher percentages than shown on the tag. All tags should give a list of the materials in the feed. But even these facts are only a limited guide in buying.

This is all the tag tells you and this information is good only up to a certain point. It doesn't tell you a thing about the quality of the ingredients, their safety, or how palatable or digestible.

You can't judge the value of any goods by the outside of the package. Let's forget analysis and price for a few minutes and think about what you GET for what you PAY. That is what determines values.

What kind of animals are you feeding? Do you know what kind of nutrients they are getting? Are they digestible, or locked up in fibre like nuggets of gold in the ground? *What are you getting for the price you pay?*

Feeding Methods Are Changing

Successful feeders now pay more attention to methods than to price tag and analysis. They are more interested in the health of their animals and in a program that insures better *results* from the right feed in the right amounts.

Successful feeders have quit buying feed to produce fertilizer and have learned how to feed a ration that is more easily turned into milk—beef—pork—mutton—eggs. They feed less—they make more.

This is due to a better understanding of feed values. A few years ago we thought that any kind of protein was just "protein", as salt is salt. Now we know better. There are several kinds of protein. Some are good—others are not.

We now know that when the cow stuffs herself with green grass she makes milk from her reserve strength. Grass is nearly 80% water and water alone won't make milk.

Be sure you feed the rations that actually make what you want—and at a profit to you. Use the right materials and mix your own rations, or buy a mixed feed from a manufacturer who sells quality.

Something That Can't Be Done

No manufacturer could stay in business very long by continually buying raw material in which there is a lot of waste. In manufacturing, practically all raw material is converted into something of value.

Your cows, steers, hogs and hens are machines. They can not produce up to a capacity set by the Great Designer unless you give them the right kind of raw materials.

Feed is the raw material which your animal machines convert into finished products. A cow may produce forty pounds of milk from twenty pounds of poor material, but she will do a better job with fifteen pounds of good feed.

You should buy the kind of raw material that the cow likes to handle. In other words the feed must be palatable. She must be able to turn it into milk with the least effort. It must be digestible.

As a food manufacturer—operating animal machines—you must have raw material containing the protein elements which are most easily convertible into finished products. Then you will increase your output and reduce your cost.

Your Safest Guide In Buying

No matter whether you are feeding dairy cows, steers, hogs, sheep or poultry your rations should contain the right amount of Corn Gluten Feed.

This pure corn concentrate is rich in the most needed proteins. In the processes of manufacture they become more digestible than the same elements in whole corn. This is why they make milk and meat instead of manure.

No other plant in the world has won as many victories in the feed lot as the corn plant has. Every great dairy test has been made with pure concentrated protein feeds—made from corn—as a large part of the ration.

Better still, corn is a safe feed. It is never used as medicine. It never caused a cow to slip her calf or become blind. Pure corn concentrates can always be depended upon to return their cost with a profit.

Your home-mixed ration should contain Corn Gluten Feed. Get it from your feed dealer or any manufacturer. If you buy a mixed ration be sure Corn Gluten Feed is in it.

PAN-A-CE-A
prevents the back-sets

IF YOU want early broilers—

If you want November layers—

You must avoid the back-sets in your growing flock.

Add Dr. Hess Poultry Pan-a-ce-a to the ration daily.

Then never mind about disease, bowel troubles, leg weakness and gapes.

Pan-a-ce-a takes care of all that.

Pan-a-ce-a tones up the appetite —promotes digestion.

Pan-a-ce-a helps your flock to turn the feed to good account—growth, bone, flesh, feathers.

You can tell a Pan-a-ce-a flock every time by the good feeling—always happy and industrious.

Costs Little to Use Pan-a-ce-a

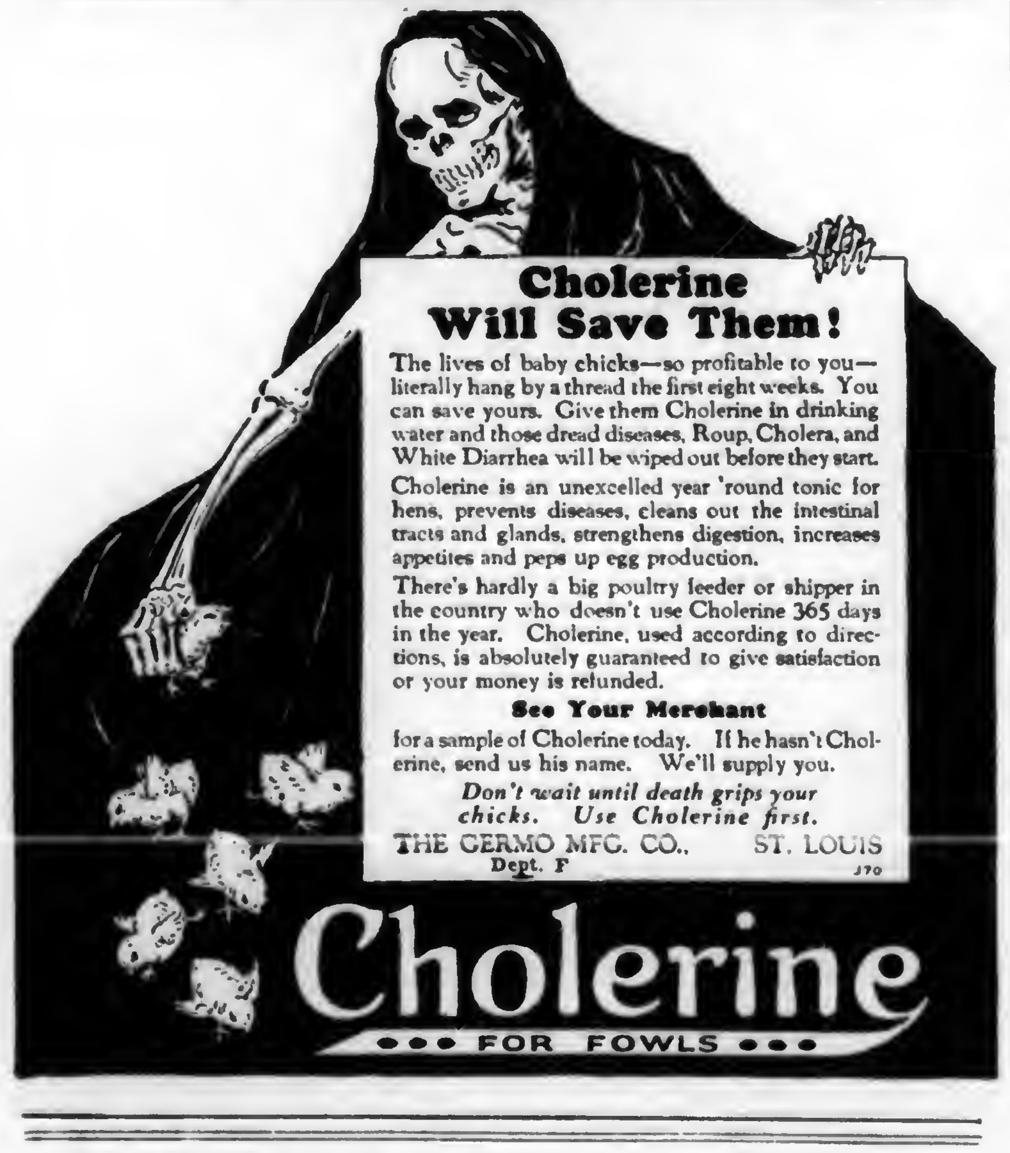
The price of just one two-pound broiler pays for all the Pan-a-ce-a 200 chicks will eat in sixty days.

Tell your dealer how many chicks you have. He has a right-sized package for every flock.

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

DR. HESS & CLARK, Inc., Ashland, Ohio

Dr. Hess Instant Louse Killer Kills Lice



Cholerine Will Save Them!

The lives of baby chicks—so profitable to you—literally hang by a thread the first eight weeks. You can save yours. Give them Cholerine in drinking water and those dread diseases, Roup, Cholera, and White Diarrhea will be wiped out before they start.

Cholerine is an unexcelled year 'round tonic for hens, prevents diseases, cleans out the intestinal tracts and glands, strengthens digestion, increases appetites and peps up egg production.

There's hardly a big poultry feeder or shipper in the country who doesn't use Cholerine 365 days in the year. Cholerine, used according to directions, is absolutely guaranteed to give satisfaction or your money is refunded.

See Your Merchant

for a sample of Cholerine today. If he hasn't Cholerine, send us his name. We'll supply you.

Don't wait until death grips your chicks. Use Cholerine first.

Egg Production Averages

FIVE hundred eighty-eight White Leghorns, owned by the Martin Poultry Farm, Newtown, led the pullet flocks numbering more than 100 birds, according to the February monthly report of poultry demonstration farms just issued by the poultry extension service of the Pennsylvania State College. They averaged 20.8 eggs per bird.

Owners of other high pullet flocks, with the number of birds and their average production were: Henry Shattuck, Erie, 142 White Leghorns, 19.8 eggs each; Frank Richmond, Jr., Sugar Grove, mixed flock of 246 birds, 18.1 eggs each; Fred Slezak, New Alexandria, 200 White Leghorns, 18 eggs each; W. L. Pellam, Emporium, 151 White Leghorns, 18 eggs each; and H. C. McCullough, Salina, 750 White Leghorns, 17.5 eggs each.

In the flocks of over fifty hens, F. B. Yockey, Apollo, had the highest producers in a mixed flock of 100 birds which averaged nineteen eggs. Other high flocks were owned by: Lone Oak Poultry Farm, Emporium, 173 White Leghorns, 16.3 eggs each; William Helmberger, Saltsburg, 392 White Leghorns, 14.9 eggs each; Mrs. Verna Shaoler, Latrobe, 246 White Leghorns, 14.6 eggs each, and Brush Creek Poultry Farm, Manor, 160 White Leghorns, 13.9 eggs each.

All of the four highest flocks of over a hundred hens and pullets were of the White Leghorn variety. Owners, number of birds and average production were as follows: Christopher Charles, Lititz, 1 birds, 20.2 eggs each; Herbert Brown, Columbia Cross Roads, 2 birds, 17.3 eggs each; J. W. Bro Erie, 236 birds, 16.2 eggs each; E. Critchlow, Harrisville, 481 bir 15.9 eggs each. Clyde Houck, C mer, with 132 White Wyandot averaging 15.5 eggs, was fifth.

Prevention of Poultry Ailment

THERE is nothing gained by doctoring poultry except in the case of a valuable bird. It is not only the actual cost of the medicines that counts, but the time spent in treating the sick fowls, the special preparation of feed, and the extra trouble in caring for sick or convalescent birds separated from the rest of the flock.

To maintain the best health in a flock it is necessary to have strong birds, dry, clean houses and clean yards; freedom from parasites; to keep close watch for the first signs of trouble and to stamp out infection when it first makes its appearance. Filth is responsible for the majority of poultry ailments.

Disease is more readily contracted by fowls that are out of condition, overfed or overfat, than those in good health. Fat hens are easy victims of roup. Birds that are in good condition and healthy, rarely ever become victims of contagious diseases. Well-developed disease is difficult to eradicate so it is best to destroy the sick birds and prevent the spread among the entire flock.

Exercise of Prime Importance

It is nature's law that the body must exercise. Without exercise it becomes sluggish, which means sickness and death. Therefore, common sense teaches us that the fowl must exercise, and this should be done largely in the outdoor air. All life needs fresh water. Be sure that the birds have plenty of pure water before them at all times.

Sleep is a recuperative process. During sleep the upbuilding processes within the body are considerably in excess of the breaking down processes. Building up requires oxygen, and oxygen is supplied in fresh air. The open-front fresh-air house provides a full and free supply of oxygen at night when it is most need

Be careful about introducing members into your flock. If must come, keep them in a quar tine pen for a few weeks.

Signs of Poor Condition

The actions of a fowl proba indicate its physical condition. physically weak fowl is inactive "dopey," and is more likely to sq than to stand. Such a fowl does scratch nor forage actively. It is last to get off the perch in the mo ing, the first to go to roost at nig and may frequently be found on perch during the day.

The shape of the body is cl related to the health and phy vigor of the individual. The d thick, compact body, with large shows greater vigor than the lo jointed, slender, more delicate of the same variety. A fowl of vitality is likely to have a long, beak and head; long, thin long, slender body; long, thin and shanks, and long, thin toes.

The feathers of a fowl of low tality grow very slowly. They likely to be dull and ruffled, as pared with the close-fitting, sm fully developed, bright plumage the vigorous fowl.

The appetite is a good indicat of vigor. A vigorous, strong consumes large quantities of foo is usually found with a full crop suitable food is available.

A fowl that has had a severe sp of sickness and is apparently cur should never be permitted in breeding pen. As a rule there some weakness from this sickn and an impaired constitution in offspring is the result. The whose stock never knew a day's si ness is pretty sure to have heal young birds.—M. K. B., Atla County, N. J.

Incubator Chicks

HAVE a 120-egg hot water incubator bought second-hand years ago. My poorest hatch this was nearly sixty. This was due to infertile eggs. My best brought off ninety-eight We use our own eggs to set. r incubator uses less than three ns of oil for a hatch. If I have uncommonly poor hatch, my cost about six cents each. If a mum hatch they cost three cents

is a very small task to watch an ator. By simply following the tions carefully I get good re- My children often do most of work. They can take the lamp fill it once each day. I always it back myself so I can be it is set right. I handle the egg but the children often turn the and fill the water tank.

To Replace Infertile Eggs

few days ago I read about a who always put extra eggs p of the full tray when setting incubator. This left the tray full the infertile eggs were taken I shall try this next time.

This is the Pumping Outfit for Small Dairies

HERE is an engine driven milker pumping outfit that is perfectly adapted for the small dairy. This pumping outfit—with standard, proven Empire Milkers—will do the milking on the small dairy with the same economy, the same speed, the same freedom from drudgery and labor difficulties that the larger Empire outfits bring to big dairies.

And not only that—but also, it can be used to do the many small power jobs, such as running the cream separator, the grind stone, wood saw, churn or any other machine that requires 1½ horse power or less.

The Empire Engine Combination Vacuum Pump is sturdy, reliable and quiet, inexpensive to install and economical to operate.

Write today for the new *free* Empire Milker Catalog No. 33—this book will show you "how to milk for bigger profits."

Empire Advantages

1. Teat cup lining is hand made and has linen inserts. Basic Empire patents cover these teat cups—they give the only complete three-sided massage, duplicating the calf's suck.
2. Standard Empire Milker Units used with Empire Electric or Engine type Pumping Outfits provide a practical size for every dairy of 6 or more cows.
3. Single or double units to meet your requirements.
4. Durable rubber parts that stand boiling.
5. Single pipe line with no complicated or moving parts to wear and get out of order. Clean. Costs less.
6. The Simple Pulsator guaranteed 4 years against wear. Only one Pulsator needed for single or double unit.
7. Low power cost—1½ H.P. outfit milks 2 cows at once—larger sizes proportionately economical.
8. Sanitary claw with automatic shut off and without moving parts to wear and get out of adjustment.

A size for every Dairy **EMPIRE** TRADE-MARK REG'D. **Milking Machines** For any kind of Power

Food Value and Product

Will you please answer the following questions? What is the difference between oats with a little buckwheat soaked and cooked for several hours, and same ground quite fine? As a rule, two quarts of oats cooked will make four with the water soaked in. How would four quarts of this cooked oats (two quarts before cooking) compare with the same weight of the ground grain as to upkeep, milk and butterfat? What is gained in feeding ground oats and corn to work horses? What do you think of a ration of ground oats and wheat bran and corn on the cob for an ordinary herd of cows for grade B milk market or milk plant? Do you think the milk situation will get any better this year?—B. P., Lycoming County, Pa.

Numerous trials at experiment stations have shown that in general cooking of either corn or roughage does not increase its digestibility or nutritive value. In fact, the digestibility of the protein is likely to be decreased. On the other hand, there is much to be gained grinding the grain for dairy cows.

For feeding horses, the saving thru crushing or grinding oats amounts to about five or six per cent. You can determine whether this increase in feeding value will more than offset the cost of grinding. Corn is not usually ground for horses, but barley and wheat, if fed, should be crushed or ground.

Grinding Increases Food Value

A ration of ground oats, wheat bran, and corn on the cob is not a satisfactory grain mixture for milk production purposes unless your roughage is leguminous, such as clover or alfalfa hay. If the roughage is mixed clover and timothy hay—in other words, half leguminous and half non-leguminous, a mixture of 100 pounds of corn and cob meal or corn meal or ground barley, or hominy feed; 100 pounds of wheat bran or ground oats; 100 pounds of cottonseed meal or gluten meal, or peanut meal; and 100 pounds of linseed oil meal would be more satisfactory.

If your roughage is simply timothy hay, corn stover, or corn silage, without any leguminous hay in the roughage, then you should double the amounts of cottonseed meal and linseed meal in the foregoing mixture. Feed the grain mixture to your cows at the rate of one p of grain for every four to four one-half pounds of milk they duce if the cows are Holstein Ayrshires. Feed one pound of for every three to three and on pounds of milk if they are Gu seys or Jerseys.

It would appear that the su of milk is nearly up to the de This fact, coupled with the fact the pasture season will soon be when there is usually more milk duced than is needed for cons tion, would make it appear that milk situation, so far as prices concerned, is not likely to be better until next fall.—A. A. B.

Guernsey Breeders M

THE annual meeting of the land Guernsey Breeders A tion was held recently at the son Hotel, Baltimore, Md.

The following officers were ed for the ensuing year: Pre Frank Hoen, Glyndon, Md.; President, G. H. Hibberd, Broo ville, Md.; Secretary and Trea Howard Symmons, Eccleston,

Members of the Executi mittee: P. W. Browning, Ri Md.; Gladden Davis, Rocks, R. E. Turpin, Centreville, M F Adkins, Hebron, Md

Mrs. G. W. Koser, President Eastern Guernsey Breeders' A tion, gave a talk on the pro work of the Eastern Guernsey ers' Association and asked th tinued cooperation of the M Association.

O. C. Jones, of the Extensio ice of the Eastern Guernsey ers' Association, spoke on the bilities of the work thruout ritory, emphasizing the im of a program of work for th associations.

Mr. Carl D. Musser, Secre the American Guernsey Cattl gave an interesting address future A. R. test for the G Cow."

The subject of a purebr campaign in cooperation wi Baltimore and Ohio Railro Maryland was discussed and mittee composed of Messrs. Merryman, Granville Hibbe Howard Symmons, was appoi take charge of the Guernsey the program.

The meeting was well a and showed the cooperative usually found at the Ma breeders' meeting.

The State's Champion Jersey Cows

Weaning the Calf

We have a new calf, she feeds from cow now, but if I want to wean her I thought there might be an easier way than the usual one. Is there a rubber teat that comes to use when first weaning a calf? Where can it be purchased? And will you please tell me whether there is a compound mixture to feed a calf after weaning, the name of it, the price, and where it can be purchased?—L. S., Monmouth County, N. J.

There are devices on the market with a rubber teat which saves the trouble of teaching a calf to drink but if the calf is to be raised to maturity it might as well be taught to drink first as last. In fact, it is much more difficult to teach a calf to drink at a later age than during the first few days of its life. These calf-feeding devices are simply pails with a rubber teat attached.

A Home Made Mixture

Proprietary calf mixtures are for sale at most feed stores. A home made one may be prepared by mixing equal parts, by weight, of hominy feed, red dog flour, linseed meal and blood flour. This preparation should be mixed with warm water. (100 degrees F.) one pound of calf meal to each gallon of water.

If the calf is drinking readily from the bucket at about ten days of age, substitute for a small portion of milk, an equal amount of the gruel prepared by mixing the calf meal as above suggested. Gradually increase the amount of the gruel fed, placing the calf on it exclusively at four or five weeks of age. Do not feed more than one gallon of the gruel mixture per day previous to the time the calf is one month of age. After this time the liquid ration may gradually be increased to one and one-half gallon daily.

Skimmilk for Good Results

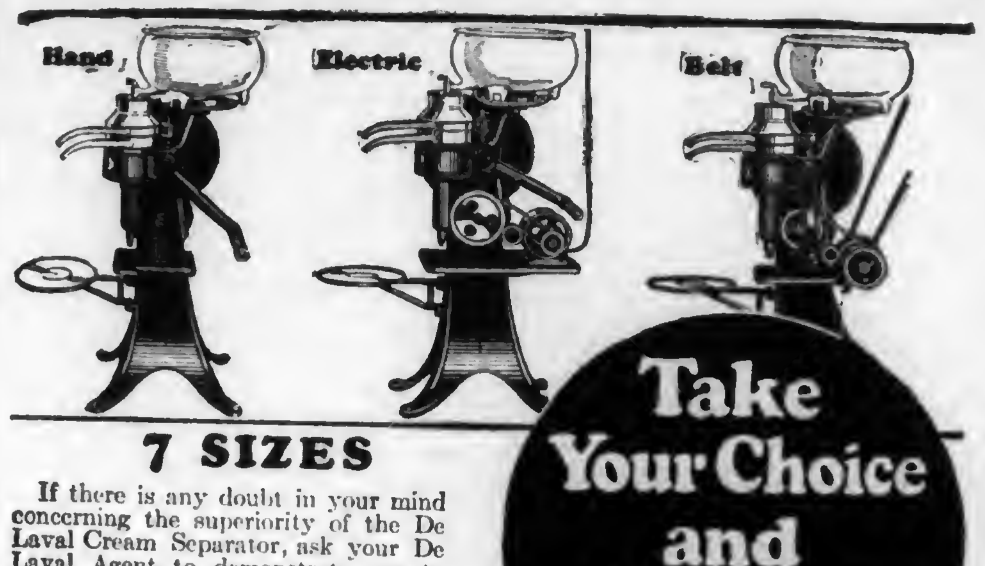
If you can secure a little skimmilk instead of making the liquid part of the ration entirely of water you will get still better results than where water alone is used to make up the gruel. Be sure the calves get all the clover or alfalfa hay they desire. Also start them on a grain mixture when they get to be three or four weeks of age. A good grain mixture for this purpose may be made up of 100 pounds of corn meal, 100 pounds of ground oats, 100 pounds wheat bran, 50 pounds linseed oil meal, 8 pounds blood flour.

Put a small handful of the grain mixture in the pail when the calf has finished drinking its milk. It will suck at the pail and thus get some of the grain in its mouth and will soon acquire a liking for it. Always feed the grain dry. The buckets in which the liquid rations are fed and the troughs used for the grain should be kept scrupulously clean if digestive troubles are to be controlled. Do not over feed. More calves are injured by over feeding than under feeding. After a calf is a few days of age supply it with an abundance of good drinking water.—A. A. B.

New Law on Milk

ON AND after May 25, 1925, it will be unlawful in Pennsylvania to serve milk in restaurants, hotels, lunch rooms, soda fountains and dining cars except in the original bottle or similar original container in which the milk is supplied.

This is one of the most important measures relating to the sanitary serving of milk passed by any legislature in recent years, states James Foust, Director, Bureau of Foods and Chemistry, Pennsylvania Department of Agriculture. This will put an end to dipping, pumping, drawing from spigots and other unsanitary ways of serving milk.—J.



7 SIZES

If there is any doubt in your mind concerning the superiority of the De Laval Cream Separator, ask your De Laval Agent to demonstrate one to you, feature by feature, in comparison with any other machine. The quality and superior workmanship and design of a De Laval are clearly evident, but if merely seeing does not convince you, your De Laval Agent will gladly arrange a free trial. Not one person in a hundred who sees and tries a De Laval ever fails to choose it.

Take Your Choice and Try it—Free

Trade in Your Old Separator as Partial Payment

De Laval Agents are now making liberal allowances for used centrifugal cream separators of any age or make as partial payment on new De Laval Separators of the latest improved type.

This offers to separator users an unusual opportunity to replace badly-worn, undersized and otherwise unsatisfactory cream separators with new De Lavals.

The Clipped Team Does More and Better Work

I CLIP our work teams primarily for their comfort both day and night. I also consider it profitable because they do not get so hot when real short haired and can stand a little more work each day than when toting along a long, shaggy, warm covering. A little extra work each day counts quite a bit in the course of a farming season.

Some years ago one of my horses contracted a severe cold so that I had to doctor him and lay him off from work several days. This meant a loss to me. I am not sure how the cold was contracted but as the horse was brought into the barn late one night wringing wet with sweat, and the hired man did not curry him or give him any attention, I believe this was the cause. We had been hauling hay, running the rope for the hay fork thru one of the barn windows. This horse's stall was right at the open window so he stood in a draft all night. This was before I started clipping my teams.

A Job for the Rainy Day

I don't do any clipping until warm weather sets in, then some rainy day I get out the clipping machine and while one turns the machine another runs over the horses and mules (we use both, altho I much prefer to work the always reliable long ears). Soon the unnecessary and undesired hair is removed. We shear our sheep by machine so it was only necessary to fit a different type of shaft and knife head onto the sheep shearing machine. Now we can clip very much faster than with hand shears, and do a much smoother and neater job, too.

Most of our work stock has been clipped from infancy so they pay no attention to it. When clipping an animal for the first time one should be firm, yet careful, for the noise and feel of the clipper going over his body is apt to make him somewhat skittish. If the operator is kind and does not hurt the animals they soon get used to the clipping.

Treating for Lice

Lice, mange, etc., are apt to get a start on work teams unless treated, and I find it very much easier to treat these troubles where the hair is short. Less medicine is required and the application is much more thoro. If a horse is troubled with lice I first clip him, then oil him well with raw linseed oil, rubbing it in. A few weeks later, if I find it necessary, I give a second treatment.

Taking everything into consideration, I find a horse clipping machine a necessity on our farm. I would never consider hand clippers because the machine does its work so much smoother and so much quicker.

How would you like to go out and cultivate corn some hot summer day with your overcoat on? Would you feel like work, and how much could you stand? Don't forget that a horse or a mule has feelings, too, and will do his work best under the best conditions and treatment.—R. L.

The Friendly Squirrel

ACTING on the suggestion of President John M. Thomas, the Women's Student Government Association, composed of girls enrolled at the Pennsylvania State College, have advanced money for the purchase of four pairs of gray squirrels which will be liberated on the front campus. These animals were selected by G. R. Green, of the department of nature study, who will feed and care for them until they are able to take care of themselves. Most of the students are acquainted with the beautiful capitol grounds at Harrisburg with its friendly gray squirrels and it is hoped that the squirrels selected by Prof. Green will thrive on the Penn State Campus.—A. L. B.

Receipts at Bethlehem

CARLOT receipts of fruits and vegetables in Bethlehem increased eighty per cent from 1923 to 1924, according to a report of the Pennsylvania Bureau of Markets. In 1923 the total receipts amounted to 365 cars, while last year the business rose to 663 cars. These fruits and vegetables came from 14 states and from two foreign countries, with over one-fifth of the 663 cars from New York state alone.

The large increase of receipts during the year occurred almost entirely in the amount of mixed produce. Last year 318 mixed cars arrived on the market, as compared with an average of only 14 cars for each of the three previous years. This indicates a change of method in the wholesale business in Bethlehem. A reduction in carlot receipts of many seasonable products, as well as in some of the staples such as apples, cabbage and oranges, signifies that these commodities came into the city to some extent in mixed cars. These mixed shipments consisted of many fruits and vegetables bought on the Philadelphia market in small lots and consigned to Bethlehem wholesalers.

Heavy Receipts of Grapes

Grapes were the most important commodity arriving as solid carloads. More than two-thirds of the 136 cars recorded were from New York state, with Pennsylvania and California prominent among the other shippers of grapes to Bethlehem. During October 120 cars of this fruit arrived in this city.

Forty cars of potatoes were received during the year. All but three of these cars were early stock from New Jersey, Virginia and southern states. It is evident that practically no cars of late potatoes were on the market from January to June and from October to the end of the year, thus indicating that local supplies completely supplied the market during these months. This, of course, is only logical and desirable, since Bethlehem is located in the heaviest potato producing area of the state.

Only one car of bananas arrived during 1924. Bethlehem's banana business is done largely thru the Allentown market, which last year received 280 cars.

Total carlot receipts of fruits and vegetables in Bethlehem during 1924 are: mixed produce, 318; grapes, 136; apples, 50; potatoes, 40; watermelons, 34; cabbage, 25; celery, 21; peaches, 12; cantaloupes, 7; oranges, 7; strawberries, 5; grapefruit, 3; sweet potatoes, 2; bananas, 1; lettuce, 1; onions, 1. Total, 663 cars.

WATCH your horses carefully these days. Guard them against strained tendons, stiff joints, troublesome growths. The instant an exterior ailment appears, treat it with Gombault's Caustic Balsam. Keep this wonderful remedy ready for emergencies. For 41 years it has been giving quick relief for Sprains, Spavin, Splint, Capped Hock, Curb, Fistula, Thoroughpin, Shoe Boils, Poll Evil, Wire Cuts, Muscular Inflammation.

Won't scar or discolor hair. Apply it yourself. Directions with bottle. Thousands of farmers consider Gombault's Caustic Balsam a real necessity. Don't be without it. Get at drug stores for $1.50 or direct from us on receipt of price. The Lawrence-Williams Co., Cleveland, O.

What is Trespass?

(Continued from page 10)

tain citizens who have a weakness for entering the orchards of their neighbors.

"The case was tried before President Judge Paul N. Schaeffer, whose career on the bench ever since his appointment by Governor Pinchot last year has given general satisfaction.

"His decision in this particular apple case, which has already became famous in local jurisprudence, is accepted as the correct interpretation of the law, and in addition is regarded as reasoning sound to the core.

"Judge Schaeffer's reasoning in a case so trivial in itself, yet so important in its bearing on the general community, is regarded as a rare evidence of the painstaking care which he has exercised in every matter which has come before him since he has been on the bench, and his decisions have received general approval."

It is to laugh; also to get mad. Actions like this bring the whole legal profession into disrepute. What is the function of a court—to indulge in hair splitting legal technicalities, or to secure justice? There is a growing uneasiness that our courts and lawyers are more concerned about the intricacies of jurisprudence than about vindicating the right.

It Is a Serious Problem

The problem of trespass is becoming very serious in Pennsylvania and New Jersey, especially near the larger towns. Some fruit growers in the more remote districts lose heavily every year thru the depredations of deer, but the loss from the depredations of auto thieves is much greater.

A shotgun loaded with birt shot and salt is an effective remedy, but one that the fruit grower hesitates to use, and one that he should not be required to use. The law, and public sentiment, should protect him and his property rights. Our American civilization has passed beyond the shotgun stage.

Orchards Must Be Protected

The time has come for fruit growers, especially near centers of population, to cooperate in protecting their property, just as jewelers and bankers now cooperate in protective associations against burglary. An apple orchard is private property as well as a string of pearls and has equal right to the protection of the law. Here is a fruitful field for investigation and action by state and county horticultural societies.

Shall we have a session of the State Horticultural Association at Harrisburg next winter on the subject of tresspass?—S. W. Fletcher.

Selling Early Potatoes

FOR years we have raised a few early potatoes for market. During the last few years, however, we have sold around a hundred bushels. In sorting so many there is quite a waste. When winter potatoes are dug the small ones can be put in the cellar to feed later, but when early ones are dug there is almost no advantageous way to use them on the farm.

We have solved this problem by sorting out all the smooth small potatoes, except the very tiny ones, and selling them for about half price. Many people who cannot buy the large ones because of the high price are glad to get these. We also set out quart baskets of them and many buy these who live by themselves or for some other reason use very few potatoes. Others are delighted to get them to cook in with peas. In this way we get quite a bit more for our crop.—Mrs. E. M. C.

There's just one explosive to use in ditching work

Only "straight" dynamite will blast your ditches *right*.

No other kind of dynamite will work in wet soil and explode from a single primer in a single hole (the propagation method).

Turn the marshy land and wet places on your farm into acres of paying crops. Ditching with dynamite costs little compared with the value of the reclaimed acreage.

Thousands of farmers in every section of the country use du Pont 50% straight dynamite for ditching. Du Pont Straight does the work quickly, easily and economically. Look for the du Pont Oval trade-mark on case and cartridge.

See your local dealer for your supply of du Pont dynamite for your ditch blasting work.

Write for a free copy of the "Farmers' Handbook of Explosives"—110 pages full of information on the use of explosives on the farm.

Your case of du Pont dynamite is a power house—right on your farm. Draw your power from your dynamite case.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

SLOWLY the crowd moved out of the courtroom. Benjamin Grimshaw rose and whispered to his lawyer. He had not spoken to his son or seemed to notice him since the trial had begun, nor did he now. Many had shed tears that day, but not he. Mr. Grimshaw never showed but one emotion—that of anger. He was angry now. His face was hard and stern. He muttered as he walked out of the court room, his cane briskly beating the floor. I and others followed him, moved by differing motives. I was sorry for him and if I had dared I should have told him that. I was amazed to see how sturdily he stood under this blow—like a mighty oak in a storm. The look of him thrilled me—it suggested that something was going to happen.

The Silent Woman—as ragged as ever—was waiting on the steps. Out went her bony finger as he came down. He turned and struck at her with his cane and shouted in a shrill voice that rang out like a trumphet in his frenzy:

"Go 'way from me. Take her away, somebody. I can't stan' it. She's killin' me. Take her away. Take her away. Take her away."

His face turned purple and then white. He reeled and fell headlong like a tree severed from its roots, and lay still on the hard, stone pavement. It seemed as if snow were falling on his face—it grew so white. The Silent Woman stood as still as he, pointing at him with her finger, her look unchanged. People came running toward us. I lifted the head of Mr. Grimshaw and laid it on my knee. It felt like the head of the stranger in Rattleroad. Old Kate bent over and looked at the eyelids of the man, which fluttered faintly and were still

"Dead!" she muttered.

Then, as if her work were finished, she turned and made her way thru the crowd and walked slowly down the street. Men stood aside to let her pass, as if they felt the power of her spirit and feared the touch of her garments.

Two or three men had run to the house of the nearest doctor. The crowd thickened. As I sat looking down at the dead face in my lap, a lawyer who had come out of the court room pressed near me and bent over and looked at the set eyes of Benjamin Grimshaw and said:

"She floored him at last. I knew she would. He tried not to see her, but I tell ye that bony finger of hers burnt a hole in him. He couldn't stand it. I knew he'd blow up some day under the strain. She got him at last."

"Who got him?" another asked

"Rovin' Kate. She killed him pointing her finger at him—so."

"She's got an evil eye. Everybody's afraid o' the crazy ol' Trollope!"

"Nonsense. She isn't half as crazy as the most of us," said the lawyer. "In my opinion she had a good reason for pointing her finger at that man. She came from the same town he did over in Vermont. Ye don't know what happened there."

The doctor arrived. The crowds made way for him. He knelt beside the still figure and made the tests. He rose and shook his head, saying:

"It's all over. Let one o' these boys go down and bring the undertaker."

Benjamin Grimshaw, the richest man in the township, was dead, and I have yet to hear of any mourners.

Three days later I saw his body lowered into its grave. The little, broken-spirited wife stood there with the same sad smile on her face that I had noted when I first saw her in the hills. Rovin' Kate was there in the clothes she had worn Christmas day. She was greatly changed. Her hair was neatly combed. The wild look had left her eyes. She was like one whose back is relieved of a heavy burden. Her lips moved as she scattered little red squares of paper into the grave. I supose they thought it a crazy whim of hers—they who saw her do it. I thought I understood the curious bit of symbolism and so did the schoolmaster, who stood beside me. Doubtless the pieces of paper numbered her curses.

"The scarlet sins of his youth are lying down with him in the dust," Hacket whispered as we walked away together.

I AM old and love my ease and sometimes dare to think I earned it. Why do I impose upon myself the task of writing down these memories, searching them and many notes and records with great care so that in every voice and deed the time shall speak? My first care has been that neither vanity nor pride should mar a word of all these I have written or shall write. So I keep my name from you, dear reader, for there is nothing you can give me that I want I have learned my lesson in that distant time and, having learned it, give you the things I stand for and keep myself under a mask These things urge me to my task. I do it that I may give to you—my countrymen—the best fruitage of the great garden of my youth and save it from the cold storage of unknowing history.

It is a bad thing to be under a heavy obligation to one's self of which, thank God, I am now acquitted. I have known men who were their own worst creditors. Everything they earned went swiftly to satisfy the demands of Vanity or Pride or Appetite. I have seen them literally put out of house and home, thrown neck and crop into the street, as it were, by one or the other of these heartless creditors—each a grasping usurer with unjust claims.

I remember that Rodney Barnes called for my chest and me that fine morning in early June when I was to go back to the hills, my year's work in school being ended. I elected to walk, and the schoolmaster went with me five miles or more across the flats to the slope of the high country. I felt very wise with that year's learning in my head. Doubtless the best of it had come not in school. It had taken me close to the great stage and in a way lifted the curtain. I was most attentive, knowing that presently I should get my part.

"I've been thinking, Bart, o' your work in the last year," said the schoolmaster as we walked. "Ye have studied six books and one—God help ye! An' I think ye have got more out o' the one than ye have out o' the six."

In a moment of silence that followed I counted the books on my fingers: Latin, Arithmetic, Algebra, Grammar, Geography, History. What was this one book he referred to?

"It's God's book o' life, boy, an' I should say ye'd done very well in it."

AFTER a little he asked: "Have ye ever heard of a man who had the Grimshaws?"

I shook my head as I looked at him, not knowing just what he was driving at.

"Sure, it's a serious illness an' it has two phases. First there's the Grimshaw o' greed—swinish, heartless greed—the other is the Grimshaw o' vanity—the strutter, with sword at belt, who would have men bow or flee before him."

That is all he said of that seventh book and it was enough.

"Soon the Senator will be coming," he remarked presently. "I have a long letter from him and he asks about you and your aunt and uncle. I think that he is fond o' you, boy."

"I wish you would let me know when he comes," I said.

"I am sure he will let you know, and, by the way, I have heard from another friend o' yours, my lad Ye're a lucky one to have so many friends—sure ye are. Here, I'll show ye the letter. There's no reason why I shouldn't. Ye will know its writer, probably. I do not."

So saying he handed me this letter:

"Canterbury, Vt.,
"June 1.

"Dear Sir—I am interested in the boy Barton Baynes. Good words about him have been flying around like pigeons. When school is out I would like to hear from you, what is the record? What do you think of the soul in him? What kind of work is best for it? If you will let me maybe I can help the plans of God a little. That is my business and yours. Thanking you for reading this, I am, as ever,

"God's humble servant,
"Kate Fullerton."

"Why, this is the writing of the Silent Woman," I said before I had read the letter half thru.

"Rovin' Kate?"

"Roving Kate: I never knew her other name, but I saw her handwriting long ago."

"But look—this is a neatly written, well-worded letter an' the sheet is as white and clean as the new snow. Uncanny woman! They say she carries the power o' God in her right hand. So do all the wronged. I tell ye, lad, there's only one thing in the world that's sacred."

I TURNED to him with a look of inquiry an dasked:

"What is it?"

"The one and only miracle we know—the gate o' birth thru which comes human life and the lips commanding our love and speaking the wisdom of childhood. Show me how a man treats women an' I'll tell ye what he amounts to. There's the test that shows whether he's a man or a spaniel dog."

There was a little moment of silence then—how well I remember it! The schoolmaster broke the silence by adding:

"Well ye know, lad, I think the greatest thing that Jesus Christ did was showing to a wicked world the sanctity o' motherhood."

That, I think, was the last lesson in the school year. Just beyond us I could see the slant of Bowman's Hill. What an amount of pains they gave those days to the building of character! It will seem curious and perhaps even wearisome now, but it must show here if I am to hold the mirror up to the time.

"I wonder why Kate is asking about me," I said.

"Never mind the reason. She is your friend and let us thank God for it. Think how she came to yer help in the old barn an' say a thousand prayers, my lad. I shall write her today, and what shall I say as to the work?"

"Well, I've been consulting the compass," I answered thoughtfully, as I looked down at the yielding sand under my feet. "I think I want to be a lawyer."

"Good! I would have guessed it. I suppose your week in the court with the fine old judge and the lawyers settled that for ye."

"I think that it did."

"Well, the Senator is a lawyer, God prosper him, an' he has shown us that the chief business o' the lawyer is to keep men out o' the law."

Having come to the first flight of the uplands, he left me with many a kind word—how much they meant to a boy who is choosing his way with a growing sense of loneliness!

I reached the warm welcome of our little home just in time for dinner. They were expecting me and it was a regular company dinner—chicken pie and strawberry short cake.

"I wallered in the grass all the forenoon tryin' to git enough berries for this celebration—ayes!—they ain't many of 'em turned yit," said Aunt Deel. "No, sir—nothin' but pure cream on this cake. I ain't a goin' to count the expense."

Uncle Peabody danced around the table and sang a stanza of the old ballad which I have forgotten, but which begins:

"Come Philander, let us be a-marchin'"

How well I remember that hour with the doors open and the sun shining brightly on the blossoming fields and the joy of man and bird and beast in the return of summer and the talk about the late visit of Alma Jones and Mr. and Mrs. Lincoln!

While we were eating I told them about the letter from old Kate.

"Fullerton!" Aunt Deel exclaimed. "Are ye sure that was the name, Bart?"

"Yes."

"Goodness gracious sakes alive!"

She and Uncle Peabody gave each other looks of surprised inquiry.

"Do you know anybody by that name?" I asked.

"We used to," said Aunt Deel as she resumed her eating. "Can't be she's one o' the Sam Fullertons, can it?"

"Oh, prob'ly not," said Uncle Peabody. "Back east they's more Fullertons than ye could shake a stick at. Say, I see the biggest bear this mornin' that I ever see in all the born days o' my life.

"It was dark. I'd come out o' the fifty-acre woods and down along the edge o' the ma'sh an' up into the bushes on the lower side o' the pasture. All to once I heerd somethin'! I stopped an' peeked thru the bushes—couldn't see much—so dark. Then the ol' bear riz up on her hind legs this to me. We didn't like the looks o' one 'nother an' begun to edge off very careful.

"Seems so I kind o' said to the ol' bear: 'Excuse me.'

"Seems so the ol' bear kind o' answered: 'Sart'nly.'

"I got down to a little run, near by, steppin' as soft as a cat. I could see a white stun on the side o' it. I lifted my foot to step on the stun an' jump acrost. B-r-r-r-r! The stun jumped up an' scampered thru the bushes. Then I was scairt. Goshtalmighty! I lost confidence in everything. Seemed so all the bushes turned into bears. Jeerusalem, how I run! When I got to the barn I was purty nigh used up."

"How did it happen that the stone jumped?" I asked.

"Oh, I guess 't was a rabbit," said Uncle Peabody

Thus Uncle Peabody led us off into the trail of the bear and the problem of Kate and the Sam Fullertons concerned us no more at that time.

A week later we had our raising. Uncle Peabody did not want a public raising, but Aunt Deel had her way. We had hewed and mortised and bored the timbers for our new home. The neighbors came with pikes and helped to raise and stay and cover them. A great amount of human kindness went into the beams and rafters of that home and of others like it. I knew that The Thing was still alive in the neighborhood, but even that could not paralyze the helpful hands of those people. Indeed, what was said of my Uncle Peabody was nothing more or less than a kind of conversational firewood I can not think that any one really believed it

(To be continued next week)

TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 12 (across) is NORN and 19 (down) is CAMEL. You may begin anywhere in the puzzle. Follow the definitions carefully, and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. Offered for consideration
8. Distant
11. To pass over superficially
12. One of the fates in Teutonic mythology
14. Smithsonian Institution, abbreviation
15. A chum
16. To strike
18. First syllable of many Scotch surnames.
20. Two objects you are using in solving this puzzle.
22. Preposition
23. Southern state, abbreviation
25. To rush with violence
27. What a boy is to his parents
28. A bit of verdure in a desert
30. A fiber rug
31. County agent, abbreviation
33. Without restraint
34. A glass adapted for changing the direction of rays of light
35. Salted and smoked pig
36. Extraordinary

READING DOWN

1. A dramatic performance
2. Governs
3. Used with "either"
4. Official or regulation dress
5. A negative
6. A set of shelves for holding dishes
7. Prefix meaning "in"
9. Like
10. Prerogatives
11. An oration
13. A passing fashion
17. Middle western state, abbreviation
19. The animal who "humphed himself"
21. Mrs. Pig
24. Roman for 101
26. Mentally healthy
29. American Education Association, abbreviation
32. Athletic association, abbreviation
33. Farming engineer, abbreviation
34. Measure of weight, abbreviation

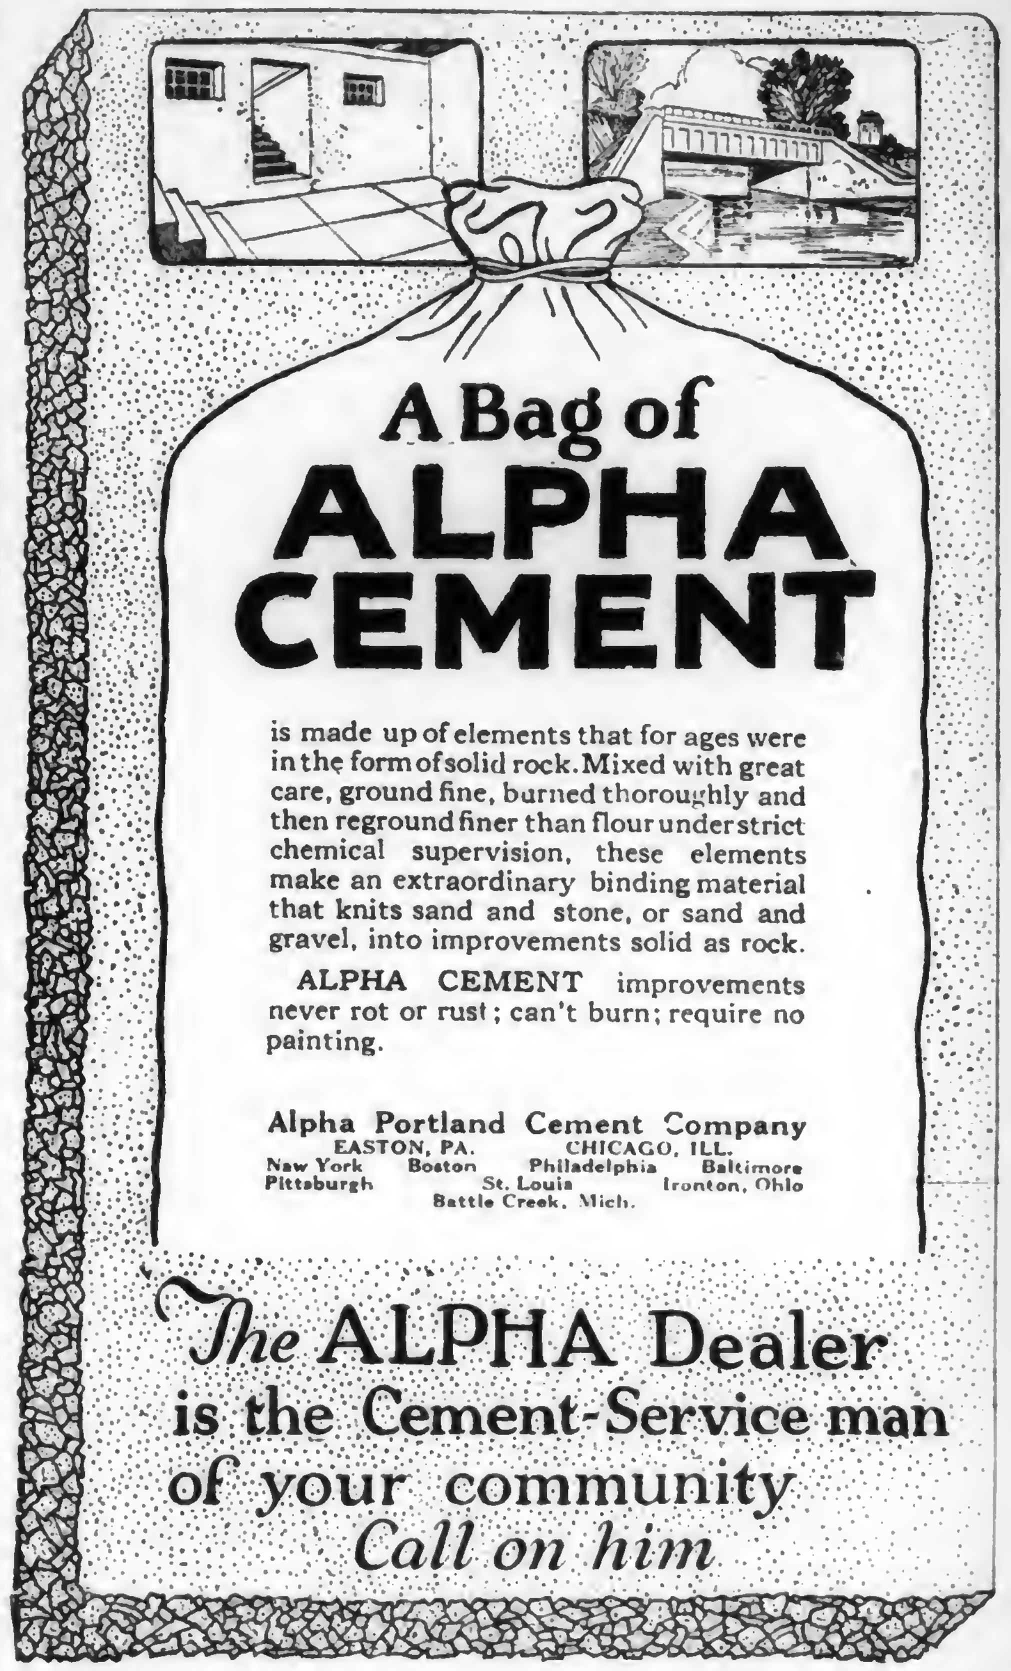
It was at a party. The young man had just been introduced to her, and after a brief and awkward silence he ventured, "You are from the West, I understand."

"Yes, from Indiana," she replied. "Hoosier girl."

He started and flushed deeply. "Why—er—really," he stammered. "—I—I don't know—that is, haven't quite decided yet."—Kind Words.



A Bag of ALPHA CEMENT

is made up of elements that for ages were in the form of solid rock. Mixed with great care, ground fine, burned thoroughly and then reground finer than flour under strict chemical supervision, these elements make an extraordinary binding material that knits sand and stone, or sand and gravel, into improvements solid as rock.

ALPHA CEMENT improvements never rot or rust; can't burn; require no painting.

Crows pulled one hill, and said: "Good night!"

writes C. H. Barrett, Thetford Center, Vt. "I wouldn't plant without it."

Hundreds of corn-growers write us letters like these: "Had no corn pulled that I could discover."—F. G. Vincent, W. Tisbury, Mass.

"Crows nor nothing seem to bother it"—M. Crockwell, Red Hook, N. Y.

"It does the job"—L. Varnum, Alexander, Me.

"One kernel was pulled by crows. None were eaten. Yet crows were in fields all the time catching bugs," says M. S. Taite, Turnhannock, Pa.

"The crows pulled only one hill of my corn"—L. Matt.n, Hillsboro, N. H.

"Saw but one hill taken"—A. J. Hicks, New Carlisle, Ind.

"Did not pull one hill in 1½ acres of corn"—G. Post, Dover, Mass.

Stanley's Crow Repellent

is what they are talking about. And we can give you scores and scores of more letters all saying the same thing. Why do you worry about your corn crop, when for $1.00 you can save from 1 to 2 acres of corn for every bushel of seed you plant? "Money Back" guarantee,—you to be the only judge. Large can, enough for 2 bu. of seed corn (8 to 10 acres) $1.50. Half sized can, $1.00. If your hardware, drug, or seed store doesn't have it in stock, order direct. Address Cedar Hill Formulae Co., Box 500 R, New Britain, Conn.

Keep Out. This field is mined. Brothers of the Crow
And this used to be our best Cornfield too

Our Young People's Forum

Cousin Ruth's Letter

Dear Forum Friends:—Outside the window, on a bare branch of the maple, a gay bluebird tilts back and forth delightedly preening himself. Around the corner, in a small bird box on top of a tall pole, Mrs. Bluebird is scurrying about getting the new summer home in readiness. For several days the two have been as busy as can be, now Mr. Bluebird is taking a rest. There he goes—a flash of gorgeous blue as he speeds back to his busy wife and their nest building.

Down in the grass, just showing green, a big, fat, contented Robin Redbreast is having the time of his life hunting for worms, and from the distance come the cheery notes of a song sparrow.

Aren't you glad to be alive these spring days so as to welcome back the birds after another winter in the southland? I'm sure you are tho, for several of you have been telling of the little feathered folk already seen around your homes. I hope there isn't a single Forum cousin who doesn't love the birds, but just the same I'm anxious for you to show me how much you do think of them. Here's how.

During the next few days keep your eyes and ears open. Watch the busy birds, see where they're building and how many are building near your home or school, listen for the notes of new comers, then before May 2 write me the most interesting letter about your bird friends you possibly can. But that's not all—the writers of the best letter and the second best letter will each receive a prize. The winner of the first may have his or her choice of a camera or a necklace, and the second either a flashlight or a fountain pen.

JOIN THE CONTEST, EVERBODY

Your letter should be called "My Bird Friends." With that for a title you can tell me about the bird house in the yard, if you have one, of the nest in the vines over the porch, of the darting barn swallows, of the swinging oriole's nest, and oh, just anything and everything you want to tell about your bird friends.

The prizes will be awarded to the two most interesting and neatest letters. Everybody try. There may be some more contests later if you show me that you like this one well enough. Sign all contributions with your full name and address and give your age, then be sure that they reach me by May second. They'll find me if you send them to Cousin Ruth, 261 S. Third St., Philadelphia.

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—I do not have to walk to school as we have a stage which takes the children. I have quite a lot of schoolmates and have lots of fun at school.

I have two sisters, one older than I and one younger. They each have a heifer and so have I.—Sarah Clark, Morris County, N. J.

Dear Cousin Ruth and Forum Friends:—I am nine years old and go to Logan School. I have a great many schoolmates and we play football, baseball and many other games. My favorite is baseball.

My father plows the ground and I harrow. It is getting nice now and I will help make the garden.—David B. Remfren, Butler County, Pa.

POSING WITH MOTHER
Dorothy and Beatrice West, Fayette County, Pa.

Dear Cousin Ruth and Forum Friends:—I am twelve years old and go to Princeton High School. My brother and I are freshmen. My other brother is in the graduating class this year.

We have an apple orchard of sixteen acres on our farm. My father was president of the New Castle Agriculture Association last year which put on the biggest display of livestock and farm products of any fair in the state.

My brother won a trip to State College next June for being the best in the judging contest at the fair last fall.—Martha L. Boak, Lawrence County, Pa.

Dear Cousin Ruth and Forum Friends:—I am ten years old and have six books in school. I also take music lessons every Saturday afternoon.

We live on a truck farm and go to Lancaster market. I like to go along to market, but I like the country better than the city.

We expect to go to the woods for flowers at school one of these days. We have jolly good times.—Erma Mae Snyder, Lancaster County, Pa.

Hello, Cousin Ruth and Members of the Y. P. F.:—School stops April 16 but I suppose I will not go to school any more this year. We always have a dinner on the last day of school. The reason I can not attend school any more is because I have twin sisters to help take care of. How many of you members have twin sisters or brothers?

I am very glad spring is near. I can hear robins singing every day. I live across the road from a woods and in the summertime I can hear most all kinds of birds singing. I love birds.—Margaret A. Morthland, York County, Pa.

Hello, Cousin Ruth and Forum Friends:—For pets I have a puppy, Brownie, a dog, Topsy, a calf, Daisy, and two ducks. We have lots of fun playing in the pines. There is a field not far away full of Jack pines.—Lucinda Moretz, Perry County, Pa.

Dear Cousin Ruth and Forum Friends:—I am fifteen years of age and live on a rented farm with my mother, six brothers and sister. I go to school in the winter and work away from home in the summer. My oldest brother works away, too. I am the oldest of all, tho.

How many of the Forum girls like to do fancy work? I do. I do a lot of embroidering. I am embroidering animals and flowers, etc., for a quilt. I am sending a recipe:

PLAIN CAKE RECIPE

⅓ cup of fat
3 egg yolks
2 cups flour
3 teaspoons baking powder
1 cup sugar
⅔ cup milk
⅛ teaspoon salt
3 egg whites
1 teaspoon vanilla

Cream fat and sugar, add beaten egg yolks, the milk alternately with flour mixed with salt and baking powder. Beat mixture thoroly, fold in the stiffly beaten whites and vanilla, bake in loaf or layers.

Here are three riddles:

1. When is the first man mentioned in the Bible?
2. If you go for ten cents' worth of long tin tacks what do you want them for?
3. Dick's father is Tom's son what relation is Dick to Tom?—Elsie Bish, Armstrong County, Pa.

THREE SISTERS
Elsie V. Cathcart, Clarion County, Pa.

Dear Cousin Ruth:—I have a few pets, a goose and a duck. I feed them every morning and evening, at dinner time I give them water and a little corn. They are pretty. The duck is black and white, the goose is black and yellow.—Violet C. Shoop, Philadelphia County, Pa.

Dear Cousin Ruth and Forum Friends:—I live in Maryland on a farm near the Blue Ridge Mountains. Every spring when arbutus comes open we go to the mountain for it.

I like to go to school. I live only one-quarter mile from the old brick schoolhouse. It is so old that my father went to school where I am now going.

For a pet I have a white cat that I call Whitey. We have nearly 300 little chickens. Mother is letting me set some eggs and I can have the money when I sell the chickens.—Caroline Leatherman, Frederick County, Md.

Answers to riddles published on the page last week:

1. Because the tail can't wag the dog.
2. There is not a single person in it.
3. Letter "m."
4. Ashes.

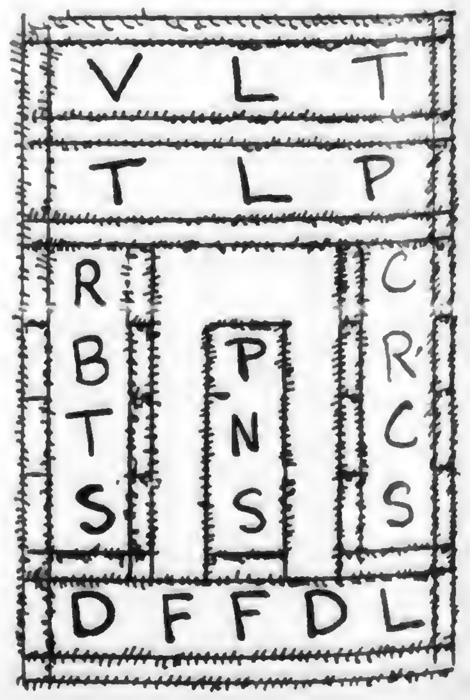
OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—Some of our little folks planted a garden. They wanted early spring flowers and brought two kinds in from the woods: one of these I think will grow for them and the other they are trying as an experiment. You can tell what flowers are blooming right now in their garden if you fill in the proper vowels along with the consonants you see popping up in each of the six flower beds in the picture. Teacher has told you, of course, that the vowels are the letters A, E, I, O, U, and sometimes W and Y. When you have found out the names of the six early spring flowers, send them to me on a POSTAL CARD so that your answer reaches me by April 25. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA. I'd like to thank the many little folks that sent in such friendly greetings along with the April fool puzzle. It is nice to know you are having a good time digging out the answers.

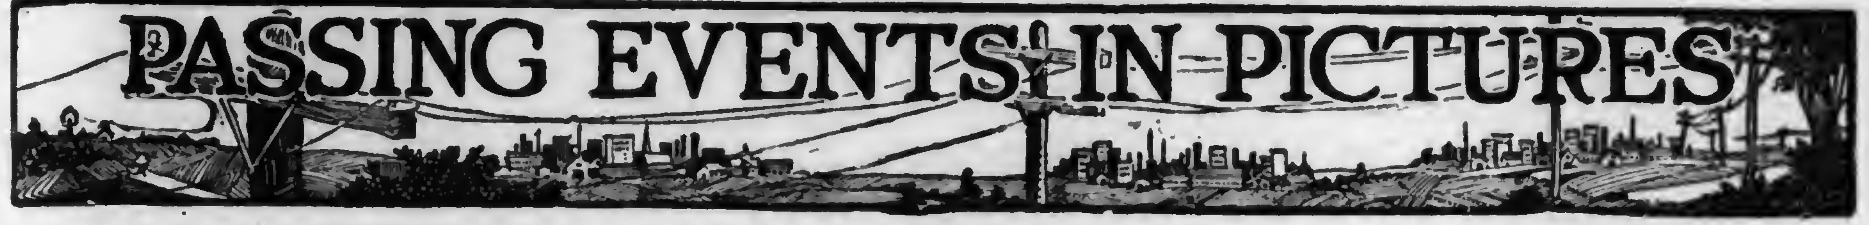
Puzzle Prize Winners

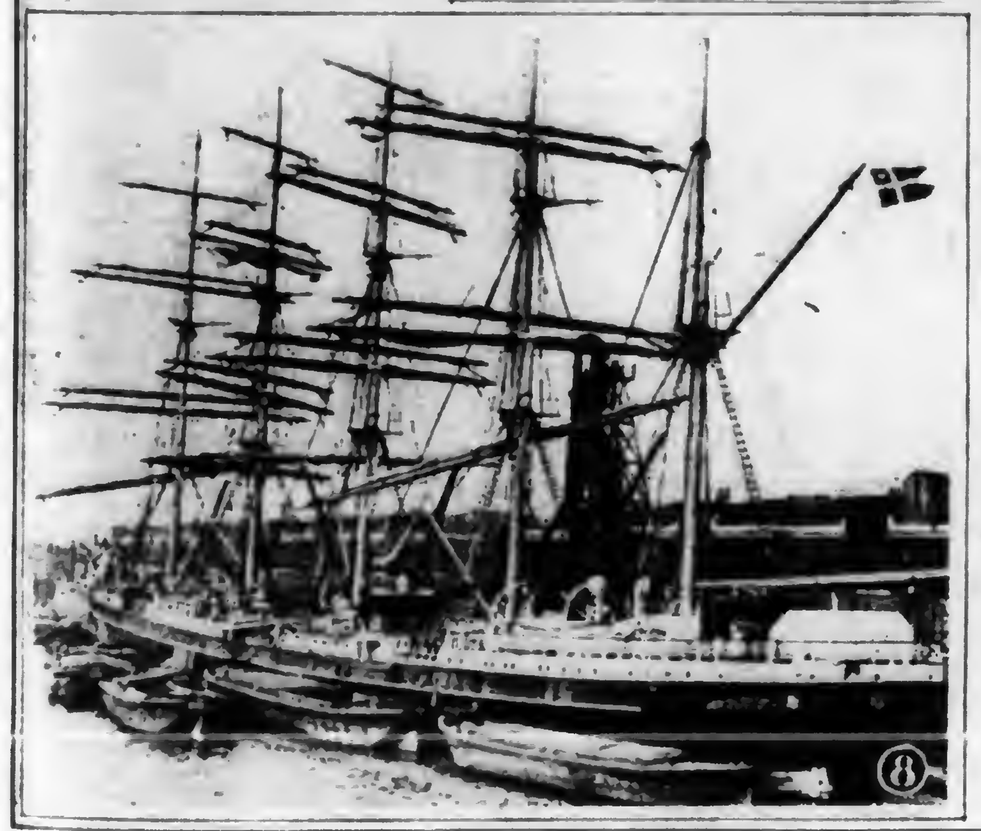
The answer to the puzzle published in March 28 issue of Pennsylvania Farmer is: APRIL FOOL.

The prize winners are: Della Calabrese, age 7, Bridgeton, N. J.; Lyle S. Cameron, age 7, Thompsontown, Pa.; Allen A. Green, age 9, Lehighton, Pa.; Elwood Koontz, age 10, Harney, Md.; Evelyn Miller, age 9, Patapsco, Md.; John M. Powell, age 10, Stittville, N. Y.; Harry Thomas Toulson, age 8, Chestertown, Md.; Gladys Tressler, age 8, Conyngham, Pa.; Bessie Elma Virdin, age 7, Smyrna, Del.; Vera Wilmarth, age 9, Honesdale, Pa.



PASSING EVENTS IN PICTURES





(Copyright by Underwood & Underwood)

1—Red Cross dogs in Alsace are trained to go over the top.
2—The New York receiving station which relays London programs.
3—Miss Sylvia Brainerd, chosen by a famous English sculptor as one of the most inspiring types of American beauty.
4—Portrait study of our new Attorney General, John G. Sargent, of Vermont.
5—Art students strive to catch some of the many phases of the new bridge between Philadelphia and Camden now under construction
6—A "visible air whistle" which its inventor expects will replace steam sirens.
7.—Prince Olaf, in center, heir to the throne of Norway, bends to the oar at Oxford, where he is a student.
8.—Danish training ship, docked in the Thames, during a visit to London. Practically all the cadets on this ship, as well as her officers, are of true viking build, topping six feet.
9.—Members of the army polo team inspected by General Pershing and Major General Hines, Chief of Staff. An international match will be held in England in June

A Fern Basket for the Home

More Directions for the Weavers Among Us

Materials needed:

- An eight-inch wooden base with nineteen or twenty-one holes, big enough for No. 5 round reed (best quality).
- Nineteen or twenty-one spokes of No. 5 reed, cut into eighteen-inch lengths.
- Two long weavers of "reed winding" (a nearly flat reed about one-fifth inch wide).
- Two long weavers No. 5 round reed.
- The tools listed in previous lessons.

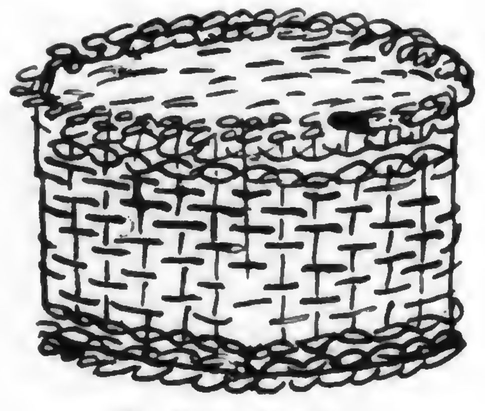
While soaking all the reeds thoroly, gradually straighten the spokes, then insert them thru the holes in the wooden base with three and one-quarter-inch ends extending on the under side, from which to make the "coil" on which the basket rests.

To make this "coil," start with any spoke, pass it to the left back of one spoke, in front of the next, and in. The last spoke will lock thru the very first one you laid down. This completes the base.

A "Pairing Arrow"

Now turn your work so that the long spokes stand up. Cut two weavers of No. 5 reed, fifty-five inches long. You are going to make a "pairing arrow" and the rule is that to make this the weavers should be twice the distance they must cover, plus four inches. With your pencil, mark the spoke which you are going to use as the starting point. Insert one weaver at the right of the "initial" spoke, and a second weaver to the right of the first one. Use the two weavers as in the directions for "pairing" in the March 21 number. The left weaver passes in front of the first spoke on its right, back to the next, and out, when the other weaver (now on the left) repeats,—in front of one, back of the next, and out. Let the two weavers cross each other each time.

When the right-hand weaver falls into the space before the initial spoke, carry this weaver in front of one spoke and back of one, then the other weaver in front of one and back of one. This finishes the first row of the arrow.



The finished basket.

Now Try the Reed Winding

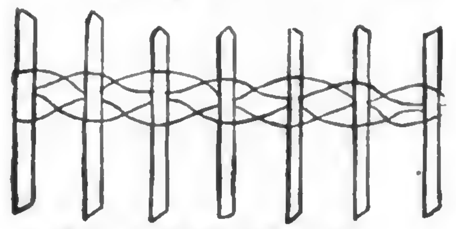
In the second row the left-hand weaver is carried in front of one spoke and back of one spoke just the same, but always under the right weaver. The first weaver ends back of the initial spoke and the remaining weaver passes in front of its proper spoke and under the top weaver at the right.

Now with your reed winding weave simple over and under for three inches, being careful not to weave too tightly. The spokes must be kept even and perfectly straight in this basket, so that the diameter of the basket is the same from top to bottom.

Another pairing arrow follows this, and then you are ready for the border, after the basket has had a thoro soaking.

The Border

First row. Start with any spoke and carry spoke one to the right back of spokes two and three, close to the "pairing arrow" and to the outside of the basket, and so on around.



How to do the weaving.

Second row. Carry any spoke over one spoke to the right and upward toward the inside of the basket, and continue on around the basket from left to right.

Third row. Carry any spoke downward over the next two spokes to the right under the border (close to the arrow) and let it rest close to the third spoke and inside the basket.

Clip the ends neatly, singe the basket, and stain dark green, using wood dye.—G. S. S.

Two Good Recipes

CORNED BEEF ROAST

TAKE a piece of meat of the desired size out of brine, soak over night in fresh water. Drain, pepper, put some onions and several pieces of mixed whole spices on it, and put into a roaster. Pour over it a half cup to a cup of vinegar and set in a hot oven for half an hour. Then pour over it some fresh hot water to which you have added several tablespoons of either catsup or chili sauce. Keep plenty of liquid in the pan. When the meat is done, brown some flour and use it in thickening the gravy. Serve with dumplings made as follows:

DUMPLINGS

To every quart of flour add two heaping teaspoons baking powder, one egg, a little pepper, one teaspoon salt, one teaspoon either dried celery or parsley, and almost a quart of well riced, cooked potatoes.

Mix into a stiff dough with milk, and into the center of each dumpling put a few squares of fried bacon, ham, or bread browned in butter. Boil in salted water. Serve piping hot—Mrs. F. G. M.

Keep in Best of Health

"THE biggest thing you need to work out now," said the doctor who had dropped in to make sure that all was well with Dorrit and with the baby that was coming, "is your health. If you stay healthy, if you and your husband just understand that the right care must be taken of you these months, then your happiness and your baby will take care of themselves.

"You are, in this relation, just an animal, and you need to develop and care for your physical side. Now put down good and hard that 'develop and care' means develop and care. It does not mean coddling and hysterics. Civilization has developed ages beyond the animal side alone. Don't imagine that God gave you the intelligence to buy a power washer, and that He still expects you to be like your advertised ancestors of the caves, and to bear your children with the ease and safety of primitive days.

"When your John trained for his track medals, and when you trained for your magnificent 'It'," (pointing to a cherished high school sweater) "you took the best possible care of your bodies. Bearing your child is a tremendously bigger feat than running a race, or thrashing a ball down the field. It deserves more, far more, of care.

"You must take your baths, watch your digestion, your circulation, your breathing. You must prepare your breasts. You must take exercises more surely than ever, to keep flexible and to keep the organs in balance. Farm women work hard, but their work tends to cramp them, throw them out of line and so out of health."

"So I am just a choice sort of animal, am I?" Dorrit finally teased.

"Yes, very choice. Worth a blue ribbon, in fact. Or, with those morning glories behind you, worth a picture. But, remember,—an animal!"

For Other Farm Women, Too

"But where can I get details? There must be special training rules for your your Baby Marathon!"

"Your doctor gives you a book."

"Yes. And for those other women, over the farms all over the land, who have not such doctors as you?"

"If the farm women over the land use their magazine editors, all may know where to get their instructions. Right here on the table is Pennsylvania Farmer. Write to the household editor there. She probably doesn't earn her living as it is, so give her a thing or two to do!"—M. M. F.

Our Newest Contributor

THE puzzles are not all in the Puzzle Corner. For months we have puzzled over the question of how to share with our readers the quilt patterns that come in from time to time.

Commercial patterns are fine (many of you are enjoying them) but there is even more sentiment connected with patterns that have originated right in Our Family.

As an experiment, the duplicating machine in our office has been pressed into service. It has reproduced two quilt patterns for us in color,—not beautiful or varied color, but anyway color. If you are interested in experiments, and want to try these patterns, send ten cents and ask for Quilt Patterns I and II—I. S. H.

Reducing the Overhea

PRESIDENT COOLIDGE is makin drastic cuts in the 1925 budge so also are the many women who a cutting down overhead expenses b making their own spring milliner

The state colleges are stressin millinery and millinery trimmings this time. In counties where the are home demonstration agents, mi linery groups have been schedul since early February. Where there no agent, it is often possible to g a specialist to come out from th state college and train a group of th leading women in a community, wh in turn pass the work on to other In addition to this help, there a bulletins which give explicit dire tions for the home milliner.

To Match Your Type and Wardro

Color is one of the first consider tions in choosing a hat. Select it f becomingness and suitability to yo wardrobe. Bright colors are in vogu in the spring to vie with Nature brilliance, tho the more sombe shades are always good. Your fa orite color is likely to appear wit a new name each season. This yea we have terrapin, Castilian, thistl orchid, blond, almond, wood, r wood, henna, Indian orange, rus bluet, and many others.

The shape of a hat should be se ond consideration. This is influence to some extent by the prevaili style,—as, for instance, the vogue a small hat. This spring it is bei replaced by a large hat which is b coming to tall folks, but tends shorten the less tall figure.

Matrons, Avoid Pokes!

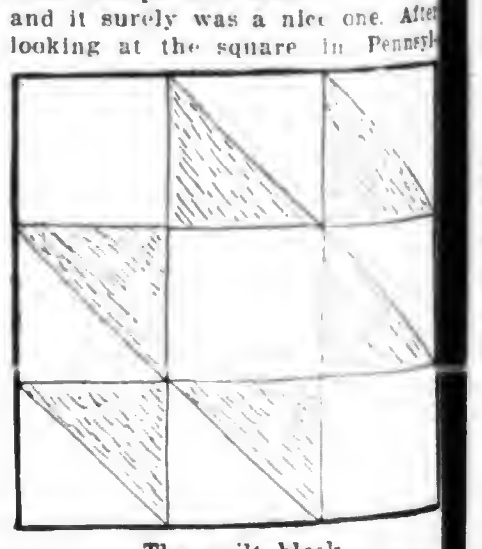
Few matrons can wear the popu lar poke-shaped hat well, for th downward lines of the hat tend accentuate such downward lines mark the face. Occasionally such hat may be worn well if it turns u in the back. In general, poke shap become youthful faces, and styles ap proaching the turban are best f mature ones.

Trimmings that stand up ad height to the figure, while tho that hang from the brim shorten th appearance.

Directions for making a simple ha at home will be given in another ar ticle.—Edith R. Dilts.

"Twin Sisters"

HERE is a quilt square called th twin sisters. I pieced a quil from this pattern when I was youn and it surely was a nice one. After looking at the square in Pennsylvania Farmer, I thought I would send this one. It should be pieced of fine white muslin and pink material or it could be made of green and white striped material, alternating with pink.—Mrs. E. M. Alexander.



The quilt block

THE CANNING SEASON

Twelve Steps in Cold Pack Canning to Remember

THE main steps in cold pack canning of fruits and vegetables are these:

1. Assemble all utensils and supplies.

2. Fill the boiler and put it on to heat. Put the blanching water on so that it will be boiling when needed.

3. Wash the jars and put them on to sterilize. No jar should be used that has any cracks. Large bubbles in the glass indicate a place where a crack may easily occur. New rubber rings should always be used (or new tops if the vacuum type of jar is used). If in doubt as to whether a jar will seal, partly fill it with hot water, seal it, and invert it. Any leakage shows that the jar should not be used.

4. Wash the product thoroly. Those with earth clinging to them must be washed with special care, as the soil may contain bacteria in the spore form.

5. Blanch by plunging into boiling water for from one to fifteen minutes, according to the product. The fruit or vegetable may be placed in a wire basket or square of cheesecloth for blanching and cold dipping.

For the Best Results

During the blanching process the pan should be closely covered, and the time counted as soon as the product comes in contact with the heat. There should be quite a surplus of water for the best results. The blanch cleanses the product, loosens the skin, causes shrinkage and destroys some surface bacteria. Omit blanch and cold dip for berries. Greens are best blanched in steam, to preserve mineral salts.

6. Cold dip. When the blanching period is up, take the product and lower it into cold water once or twice, but do not let it stand in cold water. The cold dip hardens the pulp, sets coloring matter, and makes the product easier to handle.

7. Prepare the product and pack into hot sterilized jars which rest on hot cloths or in hot water. Preparing the product consists of removing the skin from fruits and vegetables, as peaches, carrots and beets, and cutting them into convenient pieces to be packed. If in canning beets about one inch of the stem and all the tail are left on until this stage, they will not lose as much color. Corn is cut from the cob after the blanch and cold dip.

Work quickly at this stage so that the jars and product will keep hot, and place the jars in the canner or hot water bath as soon as possible. Fruit cut in half should be arranged pit surface down. Most products should be tightly packed to economize in jar space, but at least one-half inch should be left at the top in packing peas or corn, because they swell.

8. Fill the hot jars with a boiling liquid, —syrup for fruits.

9. Adjust the rubber ring and partly seal the jar, by closing one clamp on glass top jars, and by tightening completely the tops of screw top jars and then loosening them by a quarter turn. Vacuum type jars are prepared by placing on the lid and one clamp, and leaving the clamps in place till the jar is cold.

Finally the Hot Water Bath

10. Place the jars in the hot water bath. A wash boiler makes a very good one. Whatever utensil is used should have a tightly fitting cover and be deep enough for the water to cover the tops of the jars by at least an inch. During the processing the water level should never be allowed to drop below the tops of the jars. The jars must rest on some sort of a rack to prevent their touching the bottom of the boiler. This permits the water to circulate under and around the jars. The commercial wire rack is best, but a home made wooden rack is very satisfactory. Do not use newspapers, hay, or excelsior.

The water should be hot when the jars are put in, but the time should not be counted until the water boils. It should be kept boiling continuously, and when the time is up the jars should be removed at once and not allowed to stand in the boiler.

11. At once tighten the seal as each jar is taken from the boiler. If a rubber ring has been pushed out of place, put on a new one and return the jar for five minutes' additional processing.

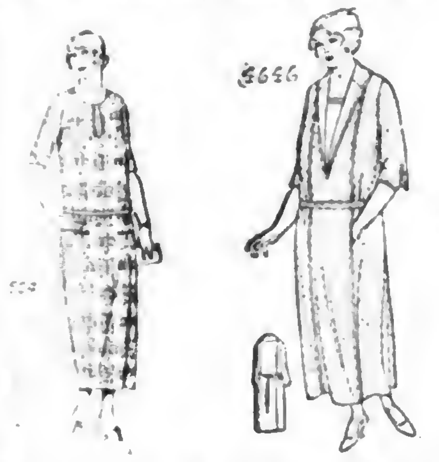
12. Cool the jars quickly, but avoid a draft. Invert to test for leakage, and store in a dark dry place. If necessary to store where the light can reach them, cover with brown paper to prevent bleaching.

Pressure canning and meat canning will be taken up in a future discussion.—Grace E. Fitts.

Now That Spring Is Here

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S Third Street, Philadelphia, Pa.

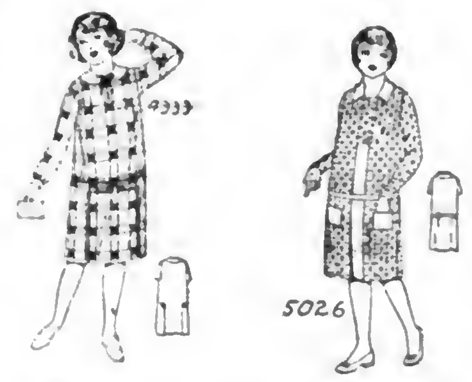
5011.—A Practical Dress.—Gingham, voile, chambray and linen are attractive for this design. It may be finished with the sleeves in wrist length or short as in the large view. The long sleeve may be finished with snap fasteners or buttons at the short outer seam, so that the sleeve may be rolled up conveniently. Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 4¼ yards of 36-inch material if made with long sleeves. With short sleeves 3⅞ yards will be required. To make as illustrated in the large view requires 3¾ yards of figured material, and three-eighths yard of plain material for cuffs and vestee. The width of the dress at the foot is 1⅝ yard. Pattern, 10c



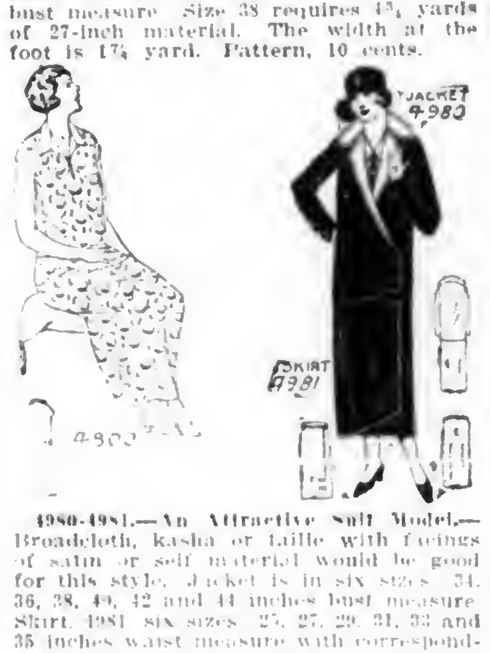
4646.—A Pleasing Style.—This is especially suited to stout figures. It is in slip-on style. Six sizes: 38, 40, 42, 44, 46 and 48 inches bust measure. A 42-inch size requires five yards of 36-inch material. For collar, facings and vest of contrasting material five-eighths yard is required. The width at the foot is 2½ yards. Pattern 10 cents.

4999.—Frock for Spring.—Plaid woolen with flannel in a contrasting shade will be good for this design. It is also very good for wash materials. Four sizes: 6, 8, 10 and 12 years. To make the dress as illustrated in the large view, requires 3¼ yards of plaid material 27 inches wide and one-quarter yard of plain for a 10-year size. If made with short sleeves one-quarter yard less of the plaid material is required. Pattern, 10 cents.

5026.—For School Days.—Plaid flannel combined with plain flannel is here shown. Wash materials may be used. Four sizes: 6, 8, 10 and 12 years. To make the dress as illustrated for a 10-year size, with long sleeves, will require 2½ yards of plaid or checked material and three-eighths yard of plain material 36 inches wide. If made with short sleeves 2¼ yards of the plaid material will be required. Pattern, 10 cents.



4809.—A Cool Summer Frock.—Printed crepe was used for this design, with facings of sateen. Chintz, ratine or gingham would also be attractive. Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 38 requires 4¾ yards of 27-inch material. The width at the foot is 1¾ yard. Pattern, 10 cents.



4980-4981.—An Attractive Suit Model.—Broadcloth, kasha or faille with facings of satin or self material would be good for this style. Jacket is in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 4981 six sizes: 25, 27, 29, 31, 33 and 35 inches waist measure with corresponding hip measures 35, 37, 39, 41, 43 and 45 inches. The width of the skirt at the foot is 1½ yard. To make the suit as illustrated for a 38-inch size requires 4¾ yards of one material 54 inches wide, and five-eighths yard of contrasting material 40 inches wide. Two patterns, 10c each.

Send 10c in silver or stmps for our up-to-date spring and summer 1925 Book of Fashions.

for WALLS

Tile Walls Like Magic

Beaver Tile Board works wonders in old kitchens and bathrooms. It gives you glistening white tile walls at one-tenth the cost of the old way because this miracle tile comes in big panels—ready to nail right over the dingy old cracked walls. Get a few panels of it from your local dealer, nail it up, enamel it, and behold the lustrous new beauty of your kitchen and bathroom. Or mail the coupon for a free sample and a full explanation of its use and application. Why put up with a dingy kitchen or bathroom any longer?

Beaver Tile Board

Beaver Tile Board comes in panels 4 feet wide and 6 to 10 feet long—each contains hundreds of uniform tiles—the indentations are deep and clean-cut. When nailed over old walls or direct to the studding it will not crack, fall or crumble. Wears like porcelain. Ask your dealer about it and mail coupon for free samples.

DIAMOND PICK MEAT and BONE SCRAPS

Meat and bone make the best animal food for poultry but various brands differ greatly in quality. Protein content alone does not determine value—the quality of raw materials used and care in making are equally important.

Diamond Pick, the best meat and bone scrap, is made in our modern, sanitary factory under constant, rigid inspection. Contains only selected meat and bone, fresh, sweet, clean. No dead or tainted stock, no hotel garbage, no fish, no tankage or filler, no splinters, glass, wire or other foreign substances. Thoroughly cooked in our patented roasters, pressed to remove grease, ground to a fine meal for easy mixing with the mash. An appetizing, safe, wholesome feed—45% to 50% protein—ample bone phosphate of lime—practically no fibre.

This product is the best animal food for poultry and in growing feed for chicks. Make us prove it! If your dealer does not have Diamond Pick Meat and Bone Scraps, we will ship three 100-lb. bags, freight paid, for only $10 to points in Pennsylvania, Delaware, Maryland and Virginia. Feed it. If YOU are not entirely satisfied we will return your money on request. You can't lose a cent.—you will make dollars. So mail the coupon today and get your birds to laying—and paying!

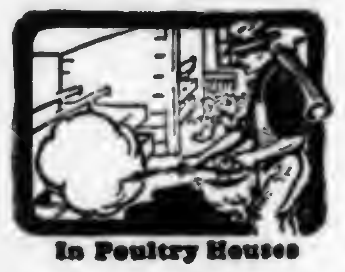
Clean Up with Carbola

Lice, Mites and Disease Germs Can't Stand It

In Stables



In Poultry Houses

In Hog Pens

Insures More Milk

Carbola is live stock insurance against tuberculosis, foot-and-mouth and other destructive diseases. The thorough sanitation you get with Carbola will *increase the vitality of your animals,* give you more milk and lower the bacteria.

More Poultry Profits

Apply Carbola to the walls, ceilings, roosts and dropping boards of your poultry houses. Dust the dry powder right on the fowls. Result—more light, thorough sanitation, healthy fowls, more eggs—and *no lice or mites.*

Paints and Disinfects

Just mix Carbola with water and you have a liquid disinfectant that *dries pure white.* It will not flake or peel off. And it is economical—one pound covers about 100 square feet. Your dealer has Carbola or can get it. If not, order direct.

5 lbs. 75c and 10c postage
10 lbs. $1.25 and 15c postage
20 lbs. $2.50 delivered
50 lbs. $5.00 delivered
200 lbs. $18.00 delivered.

USES FOR WALL PAPER

With the Odds and Ends She Dressed up the House

"MY FIRST experience with wall paper," said a capable young housekeeper, "was in renovating an old hat box. I first covered the box with muslin to strengthen it, pasting it carefully in place. Next I pasted a lining paper securely over the entire surface to be covered.

"The inside of the box was then covered with plain pink paper, while for the outside I used cream paper with tiny rosebuds. The edges were finished with paper binding.

"Next I sized the surface, taking care to cover every bit of paper, and followed this with a coat of good varnish. A really beautiful effect may be obtained if, last of all, a coat of dull varnish is applied to give softness and 'age'.

"My dining room screen was made from a remnant of tapestry paper. The frame is a rough, home made affair, completely covered first with a lining of cloth on both sides of each panel, then with the lining paper, and finally with the tapestry paper.

"Paper covered boxes for shoes or other accessories make dainty and useful additions to the bedroom.

Bedroom Furniture Renovated

"A set of old bedroom furniture was made really attractive by inserting panels of wall paper before the furniture was newly varnished.

"A lovely waste-basket for the living room desk was made by covering a suitably shaped box with a dark, rich looking paper.

"A clothes hamper was made as follows: The foundation and cover were made from heavy pasteboard reinforced with unbleached muslin and covered in the usual way with a gay striped paper.

"One of the obvious uses for lovely bits of wall paper is the making of lamp and candle shades by the same process used in making the other articles described.

"Charming work-boxes are made by covering suitable boxes with wall paper or by applying designs cut from paper. Always finish with varnish so as to make the surface waterproof.

To Prevent Unsightly Splashes

"Our house is an old one without modern plumbing. I soon discovered that my nice fresh wall papers were becoming splashed and stained back of the wash-stands.

"I made flat frames of the desired size, covered them with a pretty contrasting paper—or with that similar to the wall covering in one or two instances—and fastened them to the wall with a screw at each corner.

"These 'splashers' can be wiped clean of drops and stains and look very neat and good.

"I expect to find other uses to which I can successfully put some of the beautiful wall paper odds and ends which I am constantly seeing in the shops."—A. M. A.

Spending My Check

DEAR Pennsylvania Farmer:—I received your check and thank you. Do you want to know how I spent it? I added enough to cover the cost of a fifty-piece set of pure white dishes.

I find they are the most reasonable and best when one has a family of small children who often break a piece. One can replace these dishes so easily at the five-and-ten-cent stores.

And if you have a cake plate or bread plate of some pretty color, or better still, a bouquet of flowers or leaves, or a plant on the table to add a touch of brightness, you will not mind the undecorated china.—Mrs. F. G. M.

The Lunch Basket

THE housewife who prepares a picnic lunch, whether it be for a motor trip or a day in the woods or up the river will appreciate this attractive cover for the basket.

The cover can be made as elaborate or as simple as the fancy dictates for there are so many suggestions to offer. The cover shown on the basket is one of my favorites—made of light colored sateen with pink roses and blue birds.

The plain material used in the other is unbleached muslin and is good for roughing as it is easily laundered. For the motor trip, where the basket is put on the running board, a common market basket painted dust color with a cover of black oil cloth, is very serviceable for the cover can be cleaned with a damp cloth and is all ready for another jaunt.

Covers for the lunch basket.

Any one who is handy with the brush can make a pretty picnic outfit by painting a market basket in two contrasting colors, following the squares of the weave and having a cover to match one of the colors. For instance, a basket painted black and white with cover of black or white is quite fetching.

No pattern is required, just cut the material the shape of the top of the basket but about three inches larger all the way around, to allow for filling, then cut a half circle or V shape at each side where the handle will come. Hem, or bind with contrasting color around the edge, and put the tape thru for drawing up. A bias piece of cretonne faced on the right side of a plain cover makes a good trim unless a more elaborate one is desired.—C. S.

Do Farmers Grumble?

RECENTLY I met a school friend whom I had not seen for years. She has always lived in the city. In the course of our conversation, she remarked, "Oh, farmers are always 'poor'—they're always pleading hard times!"

At first I was inclined to be offended. Then it came to me, "I wonder if, as a whole, farmers don't grumble too much? We are warm, well fed, comfortably clothed, and have even a few luxuries. Ought we to grumble?"

On the other hand, compare our working hours with those of city people. This friend said that her husband had been laid off about half the time all summer, yet they came in their own car which they were running absolutely for pleasure.

The woman's working day was, of course, hours shorter than that of the average farm woman, yet she was doing nothing outside to bring in money. Many farm women, besides their own long list of duties, earn pin money.

Suppose farmers threw away the lantern. Suppose farm women put in as short days as do their city cousins. How long would farmers be able to keep on farming? Not long, I'm afraid. What do Pennsylvania Farmer readers think?—Mrs. E.M.C.

Here it is

The Delco-Light Millions Have Waited For

$195
F.O.B. DAYTON OHIO

AS THE world's largest manufacturers of farm electric plants we have been working for months on the development of a lighting plant that could be sold at a radically lower price—a price so low that it would bring electricity within the reach of every farm home in America.

We knew that a million farm homes were ready for electricity—that a million farmers realized the money-saving, time-saving value of electricity—that a million farm women had learned that electricity would lighten the burdens of farm life and bring new happiness and new opportunities to their families.

A Price That Is Revolutionary

We realized that a small reduction in price was not enough. It must be revolutionary—drastic. And we wanted to be able to offer this plant on very easy terms—so that every farm home, whether owned or rented, could have the benefits that are so much appreciated on the 200,000 farms where Delco-Light is now in use.

And Now It's Ready

Today the new Delco-Light is ready. It is more than we had hoped. Quantity production—modern engineering—millions of dollars worth of machinery—research and invention—have produced the Delco-Light that can make all farms electrically lighted farms.

A 600 Watt Non-Storage-Battery Plant

The new plant is a genuine Delco-Light in every respect—full 600-watt capacity, strong, sturdily built, economical in operation. It is equipped with a standard Delco starter and an economical starting battery. And its price is only $195 f.o.b. Dayton—the lowest price and the greatest value ever offered in a Delco-Light electric plant.

Complete Installation at a Remarkably Small Cost

In addition to this, special arrangements have been made whereby the Delco-Light Dealer in your community will install your plant and wire your house for five lights, to be located wherever you specify. You will receive with the plant five beautiful spun-brass lighting fixtures complete with bulbs.

And *all* of this—installation, wiring, fixtures, everything ready to turn on the lights—will cost you only $53 in addition to the price of the plant itself.

A Small Down Payment—Balance on Easy Terms

Finally, we have arranged that this new low cost for Delco-Light, completely installed, can be paid on terms so easy that anyone can take advantage of them. The total cost is only $248, including freight (a little more west of the Mississippi). But you make only a small down payment. The balance is payable on easy terms, arranged to suit your convenience.

Write for Details

Never before has such an offer been made. Never before has Delco-Light cost so little and been so easy to buy. It means that any farm home—*your* home—can have Delco-Light today.

We want to send you the full details of this remarkable offer. Write immediately for full information—specifications of the plant, illustrations of the fixtures that come with it, details of our complete installation and wiring plan and the figures that show how easily you can now get Delco-Light.

Sign and mail the coupon. There is no obligation.

An Opportunity for Salesmen
In a number of territories we have openings for Delco-Light products dealers and salesmen, who want a permanent and profitable business of their own. Previous experience is unnecessary as we conduct our own training schools. If interested, send for full information.

Yellow Corn—No 2 ear, $1.36@1.38; No 2 shelled, $1.21@1.22; No 3 shelled, $1.18@1.19.

Oats—No 2 white, 53@54c; No 3 white, 51@52c.

NEW YORK MARKETS

April 13, 1925.

PRODUCE

Butter firm. Creamery, higher than extras, 43½@44c; do, extras, 92 score, 43c; do, firsts, 88@91 score, 40c@42½c, packing stock, current make, No 2, 23½@24c.

Eggs firm; receipts, 29,972 cases; fresh gathered, extra firsts, 30@31c; do, storage packed, 31½@32c; do, fresh gathered, firsts, 29@29½c; do, storage packed, 30@31c; fresh gathered, seconds, 28½@28¾c; nearby hennery whites, closely selected, extras, 37@38c; nearby and nearby western hennery whites, firsts to average extras, 32@36c; nearby hennery browns, extras, 33½@35c; Pacific Coast whites, extras, 38@40c; do, firsts to extra firsts, 34@38c.

Cheese steady; receipts, 187,631 pounds. State, whole milk, flats, fresh, fancy, 24c; do average run unquoted; state, whole milk, flats, held, fancy to fancy specials, 26@26½c; do, average run, 25@25½c.

Live Poultry steady; no freight quotations; chickens, by express, 40c; broilers, by express, 55@65c; fowls, by express, 32@33c.

Dressed Poultry steady; chickens, 25@44c; fowls, 23@35c; old roosters, 16@21c, turkeys, western, 30@44c; southwestern, 20@42c; frozen, 30@45c.

LIVESTOCK

Cattle—Receipts, 640 head; steady, steers, $6.50@10.05; state bulls, $3@5.75, cows, $2.50@5.50.

Calves—Receipts, 1720 head; steady, veals, common to prime, $8.50@14; culls and little calves, $4@6.25; buttermilks and fed, $4@6.

Sheep and Lambs—Receipts, 760 head, steady; sheep, $3@7.50; culls, $2.50@3.50; lambs, medium to prime, $13@16; clipped, $11@13.25; culls, $9@10.

Hogs—Receipts, 390 head; steady, light to medium weights, $13@14; pigs, $11.50@12.50; heavy hogs, $12.50@13.50; roughs, $11.50@12.

Hay and Grain

Feed—Quotations were as follows: City bran, $28.50; middling, $29.50, in 100-lb sacks; red dog, $45, nominal, in 100-lb sacks; western spring bran, spot, $28.40, standard middling, $29.60; flour, middling, $37.60; red dog, spot, $44.75, all in 100-lb sacks, all-rail and lake-and-rail shipments; rye, middling, $30; white hominy feed, $39.75, all in 100-lb sacks; cottonseed meal, 36 per cent protein, $43; linseed oil meal, $43.75, in 100-lb sacks.

Hay and Straw—Hay, large bales, timothy and light mixed: No 1, $25; No 2, $22@24; No 3, $19@21; sample, $16@18. Straw, large bales, rye, $15@16.

Grain—Wheat, No 2 red, c i f, domestic, $1.39¼; No 1 dark spring, c i f, domestic, $1.95¼; No 2 hard winter, f o b, export, $1.77¼; No 1 North Manitoba, in bond, f o b, export, $1.85; No 2 mixed durum, f o b, export, $1.77¼. CORN, No 2 yellow, $1.33¾; No 3 yellow, $1.28¾; No 2 mixed, $1.33. OATS, No 2 white, 53½c; No 3 white, 51½c; ordinary white, clipped, 56½@53½c; fancy white, clipped, 60½@62½c. RYE, c i f, export, $1.29. BARLEY, malting, c i f, domestic, $1.09@1.12.

CHICAGO LIVESTOCK MARKET

Cattle—Receipts, 300 head; compared with week ago, better grades fed steers mostly 50c lower; spots off more on big weight; shipping demand very narrow; lower grades steady to weak; stockers and feeders 25c lower; she stock strong to 25c higher; bulls fully 25@35c up; light veal calves steady to 50c higher; handy and heavyweight taking 50@$1 lower. Top for week: Yearling steers, $12.25; handy weight, $11.75; heavies, $11.50; heifer yearlings, $11.50. Bulk prices follow: Fed steers, $9@10.75; fat cows, $5.25@7.50; heifers, $7.50@9.50; canners and cutters, $3@4.25; veal calves, $8.50@9.50; stockers and feeders, $6.25@7.50.

Hogs—Receipts, 3000 head; uneven, steady to mostly 10c lower than Friday's average; bulk, 160@300-lb averages, $12.50@13.20; top, $13.25.

Sheep—better grades handyweights [illegible]; clippers, $13.25@13.50; top, $13.75 [illegible]; kind as low as $10.25; California springers, $16.75@17; odd lots native springers upward to $22.50; ewes, top, [illegible]; shorn ewes, $8@8.25; shearing lambs, mostly $14.50@15.

WOOL MARKET

Boston, April 11, 1925.

Domestic—Ohio and Penna fleeces—Delaine, unwashed, 58@59c; ½-blood combing, [illegible]; ⅜-blood combing, 58@59c; ¼-blood combing, [illegible]; fine unwashed, 53@55c.

Michigan and New York fleeces—Delaine, unwashed, 56@57c; ½-blood combing, 56@57c; ⅜-blood combing, [illegible]; ¼-blood combing, 57@58c; fine unwashed, 50@52c.

Wisconsin, Missouri and average New England—½-blood, 55@56c; ⅜-blood, [illegible] 56c; ¼-blood, 54@55c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, April 11, 1925.

Clover, cash, $17.20; October, $14.65. Alsike, cash, $15; August, $13. Timothy, cash, $3.15; May, $3.25; September, [illegible]

County News and Comment

(Continued from page 7)

Frederick County, Md.—Weather clear and colder. About fifty per cent of the oats in this section is sowed, ground appears to dry off slowly. Some corn ground plowed. Grass looking good and if weather is at all favorable there should be good hay crop. Grain looking better, should pick up and make a good crop. Corn slightly lower in price. Quite a few farmers will have to buy corn before next corn harvest. Hogs scarce, especially shoats for feeding for fall butchering. Prices are accordingly high. Eggs are extra high for this time of the year. Due to scarcity of feed quite a few sold their chickens last fall. Milk situation slightly improved and prices better. Tuberculosis testing is going steadily forward.—R. J. W., April 7.

Gloucester County, N. J.—It looks as if there will be increased plantings of most truck crops in Gloucester County, with a corresponding decrease in white potatoes, and possibly watermelons and cantaloupes. There will be a big increase in peppers, tomatoes for canning and sweet potatoes. Preparations are being made to sow the seed for the late crop of tomatoes in the open ground by the tenth of the month. Community plant beds will be a big factor in the tomato game in Salem County, where they have secured $500 state-aid money to carry on this work. A very serious outbreak of apple aphis in all parts of the county, and orchardists are bending their effort toward proper spraying. Weather has not been favorable for the early spraying of peaches and apples. Hurff Weatherby will again operate his orchard electric system in the control of the Oriental moth. There seems to be a sufficient supply of farm labor to meet all the seasonable requirements. Good help is as high as last year, but the inferior help is not able to command the top prices as in previous years.—A. K., April 3.

Lawrence County, Pa.—Fine weather. Sod plowing being rushed, many tractors at work. Oats ground mostly ready and some few fields seeded where the soil was dry enough. Sugar making season short this year. Feed high and little stir in the sale of cattle and horses. Grass growing and stock will doubtless go on pasture much earlier than a year ago. Local prices for butter 50@55c; eggs plentiful, prices as low as 25@30c.—M. G. V., April 2.

Lebanon County, Pa.—Latter part of March left us with real cool weather. Most of the tenant farmers who contemplated moving have done so, and are busily engaged in their new abode. Much of the spring work has been done, most of the manure has been hauled and considerable plowing done. Many tractors are in daily use and this helps to facilitate the spring work to a great extent. A few farmers have sown their oats, while most have sown their clover seed. Most of the farmers who have orchards of any consequence have pruned and sprayed them or are doing so at this writing. Many chick brooders have been installed this spring throughout the county, indicating that many chicks are being raised. Many farmers are planting certified seed potatoes. New [illegible] fields look exceptionally good. Some of the wheat fields show up real well, while some look rather poor, due to the high winds of March, and [illegible] in the fall. Prices of produce: [illegible], $1.85; corn, $1.35 for No 1; oats, [illegible]; hay, $15; straw, $12; potatoes, [illegible]; butter, 55c; eggs, 28@30c; apples, [illegible].—P. L. M., April 2.

Lycoming County, Pa.—The weather having a tendency to dry the ground on the surface and in sunny fields has started farmers' plows going for oats and other spring planting, manure hauling and lime spreading. Fruit trees have not yet made any noticeable start but appear to have wintered in a fair condition. Most of the stock is apparently in good condition also. Onions and radishes are the principal plants in the gardens so far, but if the good weather continues many other things will be added soon. Eggs are selling in the country for 20@25c; butter, 50c; [illegible], 60c; potatoes, 65c; pork, [illegible] live weight, beef somewhat cheaper, depending upon quality, etc.—[illegible], April 6.

Monmouth County, N. J.—The fine spring weather came with a rush after the severe real winter of January and part of February. Most of the farmers were ready and by April 1 had a much larger percentage of potatoes in than usual. If the good weather keeps up most of the planting will be done by the fifteenth or twentieth. Making a rough estimate it looks at present as if there will be a cut of at least twenty per cent from last year's acreage. Aphis eggs never were more plentiful. Forty per cent nicotine solution has been used in most of the orchards with the delayed dormant spray. [illegible] observation shows better control than with oils. The [illegible] at Freehold, Farmingdale and [illegible] have increased their tomato contracts greatly over previous years. Vegetable planting in full swing. [illegible] acreage of sweet corn as well as tomatoes. About the usual acreage of other vegetables. Eggs are selling [illegible] with the yield up to normal, and about the same number of chicks being hatched in the county as in [illegible] year.—P. D., April 6.

Potter County, Pa.—Plowing is the order of the day among farmers at present. No grain can be sown yet as the soil is too cold and wet. More lime is being used each year and the results justify the practice. Several miles of concrete road will be added to that which we already have. Some potatoes are being shipped, the ridiculous price of 25c per bu. being paid. More herds of cattle being tested for tuberculosis. Four-week-old pigs cost $5 each. Veal calves, 9@10c lb. Help for farmers very scarce. The road work attracts the laborers by its higher prices and shorter days. Corn meal, $2.30; buckwheat, $2.10; butter, 55c; eggs, 25c.—M. C. S., April 10.

Susquehanna County, Pa.—This is the time of year we do a lot of talking about the "awful roads." With a few exceptions our roads are as bad as they were forty years ago during March and April. Mud and ruts are axle deep. The last snow made the mud so deep that cars are as much out of place as a balky horse. Many farmers do not have any corn that was safely matured and are seeking good seed which is hard to locate. Farmers are not selling hay liberally on account of corn failure and the generally high price of feed. The prospects are fair for wheat and young clover as the roots were protected with a deep blanket of snow for over two months steady while the temperature was the lowest (30 degrees below). They are in good condition to start off growing, providing we don't have winter conditions thru April. A few farmers are making maple syrup. Farm sales are quite numerous. Pork is high and scarce. Hay, $20; oats, 85c; chickens, 25c; butter, 48c; eggs, 28c.—J. A. G., April 6.

Feed Prices

THE quotations are for transit and nearby shipments, Thursday, April 9, 1925, according to the Pennsylvania Bureau of Markets, the New Jersey Bureau of Markets and the United States Bureau of Agricultural Economics, cooperating. The following quotations show the approximate cost of feed per ton (all in 100-lb sacks) in carlots, sight draft basis, delivered on track at Philadelphia and Scranton rate points.

Pure spring bran	$29.50
Spring bran	28.50
Soft winter wheat bran......	33.50
Hard winter wheat bran....	33.00
Standard middlings	29.00
*Soft winter wheat middlings	40.00
*Flour middlings	37.00
*Red dog flour	44.50
White hominy	40.20
Yellow hominy	40.20
Gluten feed	38.75
36 per cent cottonseed meal..	42.00
41 per cent cottonseed meal..	44.25
43 per cent cottonseed meal..	46.25
34 per cent linseed meal.....	43.20

*Superior grades of these feeds usually command premiums.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

Lancaster Tobacco Letter

THE movement of the 1924 crop into the hands of the packers' and manufacturing firms' warehouses has proceeded steadily during the past week, tho in diminished volume. A number of packers and buyers are out of the field, having secured their requirements for this year. Others who intend to do a little more buying later on have been forced to stop for the present because of the fact that their warehouses are jammed with large deliveries by growers.

Good Leaf Selling Well

The prices on good leaf have held up fairly well, and most good crops are still bringing fifteen and sixteen cents per pound. A lot of low grade leaf is being bought, and Bloch Brothers are particularly active in this line of leaf at prices of seven and eight cents thru.

A flurry in old tobacco was caused this week by the reported purchase of 3000 cases of 1923 goods by the General Cigar Company. This has had a healthy effect on the market in general. It is said that an export order in 1924 low grades is also being filled by a York County manufacturing house. The cigar business might almost be called the "sick man of industry," and the local market, in common with all other cigar leaf producing sections, is feeling the depression due to the slackened demand for cigars.

Looking Toward Organization

Good progress is reported by farm bureau officials on the proposed cooperative marketing organization. The committee named to appoint the general organization committee will meet tomorrow night. It is expected that the organization committee will proceed at once to set the necessary machinery in motion, as they are empowered to take whatever action may be deemed most logical in furthering the proposed association. An extensive program of education is planned to precede actual organization, so that every grower in the tobacco growing section may become thoroly familiar with the objects and aims of the cooperative. Leaders in the movement express confidence that the cooperative marketing program will meet with ready acceptance on the part of farmers.—Garden Spot Farmer.

Experiences with Radio

(Continued from page 2)

our late President Harding were also very impressive and will never be forgotten. The magic instrument brought everything right home to us. We felt the usual sad, depressing atmosphere attendant on all such sad occasions; we detected the movements made by the sobbing women and like actions; and then came the prayer, the singing and the sermon by the eminent clergyman.

I like all the good, high class music, both the instrumental and the vocal. By high class, I mean such music as is rendered as nearly perfect as possible. Sometimes a lady soloist gets me, then a man's solo and at other times a zippy orchestra. Even good jazz if correct and unsensual sounds fine for a change. Indeed, the youngsters like jazz best. I especially like to hear about a championship prize fight (I'm no hypocrite) the world's championship ball games, and all the great college football games.

When a Schoolmate Sings

The most impressive thing to me is listening to songs sung by some little girl who attended our school and whose "silvery whisper" was so annoying that she got measured with the ruler. It's great and it sets one to thinking.

Do you know that the radio has done in a few short years what parent's prayers have failed to accomplish, what all the eloquent preachers, all the good in literature, in sports and in every other thing, failed miserably of doing? The radio has renewed, completed and cemented the home circle. This is the last and grandest benefit of all.—R. I. W., Lebanon County, Pa.

Enjoys the Music

To the Editor:—I can't begin to tell you how many stations I have reached on my radio. I have heard from Canada, Florida, Kentucky, Washington, Cleveland, Cincinnati, Chicago. I don't know how far I have heard.

I enjoy the musical concerts and all the musical entertainment. Every Sunday night I hear the evening services in Pittsburgh which are fine. The weather reports are good, but rather late for me. I have heard the President and Vice President speak, also the Governor. The most disgusting thing I ever heard was the Democratic Convention in New York, last spring.

I am over seventy years old. I have had my radio over a year and would not part with it. There are very few nights that I cannot hear something going on.—R. E., Steuben County, N. Y.

Building a House

(Continued from page 3)

compactly as possible so as to reduce cost and lessen labor and the use of material.

The main floor of the house will be about two feet above the ground immediately outside; but this will be at least two feet above the general ground level. This means that in excavating for a seven-foot cellar we dig into the ground three feet, plus one foot for the subfloor drainage. The two-foot elevation around the building will be obtained from the ground taken out of the cellar, and the septic tank excavation. Since the tank will be in the filled in portion it will be covered by about three feet of earth, which is simple.

Receipts at Easton

RECENT tabulations of last year's fruit and vegetable receipts in the Easton-Phillipsburg market showed a twenty per cent increase over the 1923 business, according to a report of the Pennsylvania Bureau of Markets. Total arrivals amounted to 567 cars as compared with 465 in the previous year. This increase occurred in larger quantities of cantaloupes, peaches, watermelons and mixed produce. The 567 cars of the year represented perishable products from eighteen states of the Union and from Central America.

More cars of bananas were received during the year than any other commodity. Most of the 120 cars recorded came thru the port of Philadelphia and ran heaviest during the summer months.

Shipped from Philadelphia

The mixed business totaled 111 cars for the year. All but two of these cars originated in the Philadelphia market where many fruits and vegetables were bought in small lots and shipped to wholesalers in Easton and Phillipsburg.

Total potato receipts were identical for the past two years with 86 cars each year. Eight of these cars were early potatoes from New Jersey and southern states. Nine cars represented late potatoes, about half of which probably were seed stock. It is shown, therefore, that not more than four or five cars of table potatoes arrived on the market to compete with locally grown stock during the periods of January to June and October to the end of the year.

Total other receipts of fruits and vegetables at Easton-Phillipsburg during 1924 were as follows: Bananas, 120; mixed produce, 111; potatoes, 86; watermelons, 68; cantaloupes, 31; celery, 28; peaches, 25; apples, 21; sweet potatoes, 21; grapes, 20; cabbage, 10; strawberries, 9; oranges, 7; tomatoes, 3; cranberries, 1; grapefruit, 1; lemons, 1; lettuce, 1. Total 567 cars.

Customer—I want two pounds of four-penny nails.

New Clerk—We're out of four-penny nails, but I can give you four pounds of two-penny nails.—Good Hardware.

Chicks Dying From White Diarrhea

How to stop it in 48 hours

A letter from Chas. N. Kittinger, of Willows, Calif., contains good news for poultry raisers who are losing baby chicks. He says:

"Twelve of my chicks had diarrhea when I started giving them Avicol. By the second day the trouble disappeared, and now they are all lively as crickets. If I had only known of Avicol sooner, I would have saved lots of chicks."

There's no doubt that Avicol is wonderful both for preventing and stopping disease in baby chicks. It has a specific action as a bowel antiseptic and regulator. Usually within 48 hours, the sick, droopy chicks are lively and healthy. A liberal supply of these tablets can be obtained by sending fifty cents to The Burrell-Dugger Co., 549 Allen St., Indianapolis, Ind. As Avicol is positively guaranteed to do the work or money refunded, it costs nothing to try. Readers will be surprised at the way chicks grow and develop, in vigorous health, when these tablets are used in the drinking water.

BABY CHICKS
From 200-Egg Hens

Chicks from winter laying, farm raised, mature stock S. C. W. Leghorns, R. I. Questions on Soil and Crops

Answered by J. G. LIPMAN, Staff Contributor and Adviser

I have a field that was in corn last year which I intend to plant in potatoes. I manured it lightly and expect to mix 200 pounds of sixteen per cent acid phosphate and 100 pounds of muriate of potash and apply about 800 pounds to the acre. Also about 300 pounds of the above mixture per acre for corn broadcast. What is your opinion of the above mixture and can you suggest something better?—H. Z. S., York County, Pa.

The mixture proposed by you should be reinforced with some carrier of ammonia if you are to grow a large crop of potato tubers of good quality. I would suggest the following mixture: Nitrate of soda, 200 pounds; sulphate of ammonia, 200 pounds; acid phosphate, 1300 pounds; muriate of potash, 300 pounds.

The analysis of this mixture will correspond to a little more than four per cent of ammonia, ten per cent of available phosphoric acid and seven and one-half per cent of potash. Since your ground received a light dressing of manure, an application of 800 to 1200 pounds per acre of this mixture would be sufficient for potatoes. The application for corn should be at the rate of 300 to 500 pounds per acre.

Since the proposed mixture carries no animal or vegetable source of ammonia and no other material that would serve to maintain the mixture in a good drillable condition for some time, it would be well not to mix the ingredients until within a day or two of their application.—J. G. L.

Life of Legumes

I would like to ask you a few questions concerning sweet clover and alfalfa. (1). How long will sweet clover last in pasture ground if it is not cut? (2). If sweet clover is allowed to ripen every other year will it last more than two years? I have watched a small patch in a yard (about four feet square) for some years and it was just as thrifty last year as it has been for several years past. I also noticed that it seeds every other year. (3). About how long will a good stand of alfalfa last if it is properly cared for, and what kind of care will it require?

I intend to try a small plot of ground to alfalfa this year. There is no alfalfa in this community, and never has been. I intend to sow oats and sweet clover this spring, and cut this, whatever it makes, before time to sow alfalfa. The ground will get about three tons of lime to three-quarters acre, and about 400 pounds of acid phosphate. This ground was gardened last year and had a good coat of stable manure. Do you think I am safe in this experiment?—J. W. S., Elk County, Pa.

1. Sweet clover will persist in pastures when it is not grazed sufficiently to prevent some of the plants from going to seed. There always will be a few plants along the fence that will produce seed and some may be carried in by the wind.

2. By sowing sweet clover in alternate years, you will be able to have some seed produced every year. It is probable, therefore, that, while sweet clover seeds once in two years, an annual crop of seed may be had when the clover planted in alternate years is allowed to go to seed.

3. Under ideal conditions a stand of alfalfa will last almost indefinitely. Such conditions are approached in the irrigated soils of the Pacific Coast and elsewhere. In humid climates alfalfa sown on well-drained land and well supplied with lime may continue to yield large crops of good quality hay for six or seven years and occasionally even longer. Ordinarily, the stand begins to deteriorate after three years because of encroaching grasses and other plants.

4. Your plan for starting alfalfa is sound. The matter of inoculation should be considered. If sweet clover is abundant in your neighborhood, and it is presumably well inoculated, it will not be necessary to make a special point of inoculating the alfalfa seed or soil, since the bacteria which produce the nodules on sweet clover are similar to those that produce the nodules on alfalfa. It would be well, nevertheless, to make certain of the presence of a sufficient number of the right sort of bacteria to give the alfalfa a good start. Hence, the areas intended for alfalfa should be inoculated either with soil from an old alfalfa field or the alfalfa seed should be inoculated with one of the high-grade commercial cultures manufactured for the purpose.—J. G. L.

When Planting Barley

Can you tell me the best variety of barley, the proper proportions for mixing the seed and the amount sown per acre?—C. T., Cambria County, Pa.

Where mixtures of oats and Canada field peas are grown for forage purposes, one and one-half bushels of each is used and the seeding is generally at the rate of three bushels per acre. In the case of barley about one and one-quarter bushels mixed with one and one-half bushels of Canada field peas, and sown at the rate of two and three-quarter bushels per acre, should give good results.

Barley requires somewhat better soil than oats, and, hence, oats would be given preference on land which is not in a good state of fertility. The variety of barley usually recommended for seeding with Canada field peas is the Manchuria. If this is not available, any other six-rowed variety of barley may be used.

In the case of Canada field peas the Golden Vine should be a satisfactory variety. This is medium early. Early varieties that might be suggested are Canadian Beauty and Blackeyed Marrowfat. For late varieties, Green, Scotch, Greenfield and Prussian Blue are well recommended. While these late varieties produce a larger crop, they have a longer growing season. It is essential to mature the crop early in the Middle Atlantic States; otherwise, the crop may be seriously set back by the warm weather and by damage done to the field peas by the pea louse.—J. G. L.

Value of Stable Manure

Will you please give me some information in regard to using stable manure to the best advantage? Is it better to plow manure under, for a crop like corn or potatoes, or put it on meadows that are not to be plowed the same year? Which is the better way to get the most out of it in building up soil? Is there a likelihood of manure losing a portion of its strength, by absorption from the air, when spread on a meadow and not plowed down that year?—B. F. K., Mercer County, Pa.

The value of farmyard manure is attributed partly to the fact that it increases the supply of so-called humus or humus-forming material

(Continued on page 30)

Reliable Day-Old Chick Hatcheries

Questions on Soil and Crops

(Continued from page 28)

in the soil. It is also valuable because it furnishes ingredients of plant food such as nitrogen, phosphoric acid, potash and lime and very large numbers of bacteria that stimulate fermentation and cause plant food to become available.

It follows, therefore, that where the loss of humus from the soil is less than the accumulation of it, as happens in grass lands, manure would render better service for tilled crops, like corn and potatoes, than it would on meadows. For the latter top-dressing with chemicals will, under ordinary conditions, be as effective and, in some cases, even more effective than top-dressing with manure.

There are occasions, of course, especially for the more open soils, soils inclined to heave, etc., where the broadcasting of manure on meadow land would be desirable. Where no commercial fertilizer can be had at a reasonable price and a large supply of manure is available, the use of it on meadows would also, of course, be the proper procedure.

In a general way, it has been demonstrated by experiments in this and other countries that manure is used more effectively when it is put into the soil rather than spread on the top of the soil. For instance, manure spread on a field on a windy day tends to dry out and in the drying process some of the ammonia escapes into the air. For this reason, the plowing under of manure, where this is to be done, should not be delayed.

From what has been said above, you will note that where the supply of manure is limited it can be used to better advantage for corn or other tilled crops. The meadow lands will then have to be fertilized with commercial fertilizers or with a small quantity of manure reinfor with commercial fertilizers.—J. G.

One Mixture for All

I would like to have information in regards to the kind of fertilizer for corn, oats and potatoes, on a sandy loam and gravel ground. The corn and potato ground had a liberal coat of stable manure (all but about one acre) and does not have much of a clover sod, mostly timothy. The corn stubble ground for oats was partly manured last spring. It is also gravel and loam ground. Would like to know what analysis of fertilizer to use for these crops. R. J., Juniata County, Pa.

In order to avoid the handling several different sorts of mixtu for corn, oats and potatoes, it w be best to try to make up a mixt that would do for all three cro The amounts used could be so vari as to allow the economical feedi of each crop. A mixture made up

Ten per cent tankage.....	300
Nitrate of soda	170 "
Sulphate of ammonia	160 "
Acid phosphate	1170 "
Muriate of potash	200 "

would be suitable for application your land in the following-nam quantities:

Potatoes—1000 to 1400 lbs. acre.

Corn—400 to 500 lbs. per acre.

Oats—300 lbs. per acre.

The mixture sugested will conta about five per cent of ammonia, little more than nine per cent available phosphoric acid and per cent of potash.

The portion of your field that had no manure might receive add tional quantities of the same ture as a side-dressing in the case potatoes.—J. G. L.

Color Pigments in Concrete

HOW to beautify concrete by giving it color is often a serious problem that confronts the average user of cement. Too often the attempt to do good work with various materials ends in failure. However, definite and permanent results can be secured by following a few instructions pertaining to the method and kind of coloring matter inserted in the mixture.

Mineral colors only should be used for coloring concrete products and concrete surfaces. Organic coloring pigments should be avoided as they are unstable and fade in the sun.

A general guide to the selection of colors and coloring materials to obtain various effects follows:

For BLUE shade, use Prussian Blue or Ultramarine Blue.

For BROWNS use Burnt Umber or Brown Oxide of Iron.

For BUFFS use Yellow Ochre or Oxide.

For GRAYS use small quantities of Manganese Black or Germantown Lamp Black.

For GREENS use Greenish Blue Ultramarine or Green Oxide of Chrome. A mixture of yellow Oxide and Ultramarine Blue will also produce a satisfactory green pigment.

For PINKS use small quantities of Red Oxide of Iron.

For RED shades such as light brick, terra cotta, etc., use Red Oxide of Iron.

For SLATE effects use Manganese Black or Germantown Lamp Black.

Variations in the color of the materials, including the pigments themselves, are such as to make color formulas only approximate. Best results are obtained by experiment or trial.

After selecting the primary col desired the exact shade may be d termined by preparing a number small mortar panels which should made of the same materials a proportions as are intended to used in the actual work. The sha and color selected may be duplicat in the actual work by keeping a r ord of the percentage by weight color pigment used, based on th cement content. Ratio of cement aggregate should be kept constant.

Store the color samples made u der moist conditions for about f days; avoid placing them in dir sunlight until they have thoro hardened. Bear in mind that pane will have a darker shade when dam than when dry.

In no case should the amount color pigment exceed ten per cent the weight of the cement used. other words, do not use more tha nine pounds of color to one sack cement. (Ninety-four pounds.) Th addition of larger amounts is like to reduce the strength of the resul ing mixture.

White portland cement should used to obtain the more delica shades of the lighter colors and t all white finishes. When clear whi is desired white sand should be use in the mortar, proportioned one pa of white portland cement to thre parts of white sand. The use o white portland cement with yello and brown sands will produce vary ing shades of cream, yellow and bu This may be determined by makin trial panels with these materials. the colors desired can be secure without pigments such practice recommended.—N. S. Grubbs.

SWINE

ERKSHIRES PUREBRED REGISTERED
Brood Sows, Boars. Male and female pigs.
OLF CREEK FARM, R. D. 2, Slippery Rock, Pa.

STRAWBERRY PLANTS

TRAWBERRY PLANTS—25 Progressive Everbearing 1 dozen Giant Washington rust-resistant Asparagus 25c; $1.25 per 100 by mail, postpaid. Price list other leading varieties, free. John B. Miller, Lancaster County, Route No. 1, Pa.

HAMPION Everbearing Strawberry Plants $1.50 per $9.00 per 1000; 5,000, $12.50. M. S. Salisbury, Md.

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

GRUBS, WARBLES—DEFORMED COLT—WORMS IN SWINE—LICE. —What is the matter with my cattle? They have lumps all over their backs and when squeezed grubs come out of openings. I have a cow that is hump-backed and was told she had catarrh of the bowels. Can she be cured? What can be done for pigs that have too many worms? What is the best remedy for cattle and hog lice?—J. H., McClure, Pa. Pressure properly applied to the swellings will cause the grubs to "pop out" if they have reached a late stage of development, or enlarge opening with sharp pen knife, then apply pressure with the neck of a bottle. Care should be taken to crush all grubs, so as to prevent the possibility of their further development and transformation into flies. Another method of treatment is to force grease or oil into the opening of the warbles, which kills the grubs. This method I have found less certain than that of removing the grubs and has the further objection that the dead grubs remain beneath the skin. The intestine of swine is a common abode for parasites, and on account of the mode of eating and the habits of swine it is rather the exception to find even an old hog entirely free from intestinal parasites. Their injury to the hog depends upon the kind and the number of parasites. Treatment: Prevention is far more satisfactory than treatment of infested hogs. The extent of infection can be materially diminished by keeping the quarters clean, gathering their droppings and mixing some lime in them or burning. Thoroly mix a teaspoonful of dried powdered sulphate of iron in ground feed and give it to your hogs daily, this is enough for six or eight hogs weighing 100 pounds each. One part coal-tar disinfectant mixed with twenty parts water will kill cattle and hog lice. Kerosene emulsion is another remedy. Your colt is deformed.

BREEDING QUESTION.—I wish you would tell me what caused my sows to have pigs which failed to live. Last fall the sows ran in the orchard, were fed corn, bran, and had running water to drink. Turned boar into lot with the five sows, one sow had thirteen pigs, four lived; another sow had eight pigs, six of them lived; another sow had four pigs, all of them lived; the fourth sow had one dead pig. The fifth sow failed to get with pig.—W. S., Lancaster, Pa. Had your sows been fed some tankage and eaten fewer apples they might have had stronger pigs. A brood sow, to do well, should be fed a balanced ration, especially during pregnancy.

COW SUCKS HERSELF. — We have a cow which had her second calf some two months ago, now she persists in sucking herself.—Mrs. N. J. J., Trenton, N. J. Put a strap around the cow's body just back of the front legs and a stick from the strap to her halter, running the stick between her front legs, but don't use too long a stick. Another method is to apply a surcingle around body behind her front legs, a ring fastened on each side with a strap attached to each ring leading to a halter on her head. As long as this appliance remains on she can graze, get up and down, but will be unble to suck herself. In some cases putting an old horse collar on a cow will prevent her sucking herself.

"What has become of that bad curve just outside of Plunkville?"

"The town did away with it."

"A good idea."

"Yes, it was cheaper to do that than to build a hospital."

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 3 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

How to Read the Chart:
E means Gargoyle Mobiloil "E"
Arc. means Gargoyle Mobiloil Arctic
A means Gargoyle Mobiloil "A"
B means Gargoyle Mobiloil "B"
BB means Gargoyle Mobiloil "BB"

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures are experienced.

The Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

Transmission and Differential
For their correct lubrication, use Gargoyle Mobiloil "C," "CC" or Mobilubricant as recommended by complete Chart available at all dealers.

UNSAFE
CROSS AT YOUR OWN RISK

What is your Margin of Safety?

NO GOOD BRIDGE IS built without providing an ample margin of safety. No skyscraper is erected without allowing a margin of safety. No good automobile is designed without making sure that there is a margin of safety in all those parts which must withstand severe strains.

No lubricating oil should be used in your automobile engine which does not provide an ample margin of safety. Unusual strains are sure to come—demands of cold weather which congeals unsuitable oil, the added heat of a hard pull in low gear through snow or mud, the added friction of a necessary spurt of speed. Even the most careful drivers run into these conditions.

It is then that the difference between haphazard lubrication and Gargoyle Mobiloil, with its greater margin of safety, may mean

—*the difference between a burned out bearing—or a* protected *bearing*
—*the difference between a damaged engine —or a* protected *engine*
—*the difference between excessive carbon —or* infrequent *carbon*
—*the difference between dangerous frictional heat—or minimized frictional heat.*

When you use the grade of Gargoyle Mobiloil specified for your car, you secure the fullest possible margin of safety in the operation of your automobile engine. For no other automobile oil has back of it such specialized manufacturing experience and success.

That is why practically every automobile manufacturer endorses the Gargoyle Mobiloil recommendation for your car in the Chart of Recommendations.

That is why Gargoyle Mobiloil is asked for by name at least five times as often as any other oil.

If you want the greatest margin of safety in the lubrication of your automobile engine, you want Gargoyle Mobiloil —the grade recommended for your car.

TRACTOR *Lubrication*

The correct engine lubrication for the Fordson Tractor is Gargoyle Mobiloil "BB" in summer and "A" in winter. The correct oil for all other tractors is specified in our chart. Ask for it at your dealer's.

The cost of producing milk in Pennsylvania—a summary of the records of thirty-five cow testing associations. Page three.

Your House is on Fire and Slowly Burning

Slowly but surely, without flame or smoke or apparent heat, the unprotected surfaces of your home are being burned by the oxygen of the air. Chemistry shows us that oxygen is combining with the carbon of the wood to form carbon dioxide and ashes—the same wastes as are produced by fire. The only difference is in the matter of speed.

Lucas
Tinted Gloss Paint

offers the best and cheapest insurance against this slow fire.

IT COVERS more square feet per gallon and more thoroughly hides the surface. IT BEAUTIFIES and its beauty lasts. IT LASTS longer because it is made of highest-grade materials, carefully selected, scientifically combined by skilled workers of long experience. IT PROTECTS positively because its smooth, glossy surface is impervious to weather.

IT IS ECONOMICAL—costs less both first and last.

You can preserve your property on convenient time payments. Ask the *Lucas* dealer in your community or write us for name of nearest dealer.

"Purposely Made for Every Purpose"

CAMBRIA FENCE

Good Fence Requires Good Steel

CAMBRIA FENCE is a Bethlehem product, made by experienced steel makers who have been making farm fencing for many years.

The best wire for the purpose is used—strong, springy, clean steel wire, carefully selected, full gage and heavily galvanized.

CAMBRIA FENCE is of the *hinge-joint* type, with a tension curve that insures tautness. It is strong, durable and dependable.

Ask your dealer for CAMBRIA FENCE. There is a kind to meet any requirement.

BETHLEHEM STEEL COMPANY, Bethlehem, Pa.

BETHLEHEM

Questions on Soils and Crops

Answered by J. G. LIPMAN, Staff Contributor and Adviser

I have a half acre of ground which had an old building on it. The ground is very rich black soil, as good as you can get. I have farmed it for three years now and have manured every year after plowing. I put hen manure and ashes all over it and 200 of phosphate on it. I have been growing onions on this ground, then after they are pulled I plant buckwheat. The onions have big tops but roots are small, the buckwheat straw is very tall, like big wheat straw, but no buckwheat. Can you tell me what is wrong?—W. T. S., York County, Pa.

Your description makes it clear that your land is well provided with some ingredients and deficient in others. You have a good supply of nitrogen in the soil, but, evidently, an insufficient supply of lime, phosphoric acid and potash. An abundance of these is particularly important for a good onion crop. In view of the fact that the onions make very large tops and small bulbs and the buckwheat very tall straw and little seed, it is to be recommended that you apply both lime and a fertilizer containing a good proportion of potash. A large application of lime need not be made. At this time 400 to 500 pounds of hydrated lime per acre would answer your purpose.

In addition, you should use a commercial fertilizer containing about two per cent of ammonia, eight to ten per cent of phosphoric acid and ten per cent of potash. This should be used at the rate of 800 to 1000 pounds per acre. The application suggested should help you grow a good crop of onions.—J. G. L.

Has a Poor Field

Please advise as to the most economical and yet profitable method to prepare a very poor field for fall seeding to wheat and grass without manure. It is a shale or slate gravel soil lacking humus and plant food. Have been thinking of sowing either of the following crops to turn under: oats and sweet clover, soy beans, buckwheat, rye or cow peas, or would you suggest some other crop and would it be best to use any fertilizer and what analysis?—J. D. W., Lebanon County, Pa.

Of the crops mentioned by you, oats and sweet clover would be by far the best for the purpose which you have in mind. You might utilize also oats and spring vetch or barley and spring vetch. These mixtures, however, offer no advantages over oats and sweet clover. If it is not practicable to sow the oats and sweet clover before May 1, soy beans would be the next best crop. These might be planted at the end of May or at the beginning of June. Buckwheat or rye and cow peas would hardly be satisfactory.

In order to give the green manure crop a good start it would be desirable to use some commercial fertilizer, preferably a 3-8-5 or a 3-8-6, at the rate of 300 to 400 pounds per acre. If neither the sweet clover nor the soy beans had been grown on the land before, inoculation would be desirable.

Turn under When Practicable

The green manure crop should be plowed under as soon as may be practicable and the land fitted for the wheat and grass. In the case of oats and sweet clover, the entire crop might be plowed under in the early part of June and the land summer fallowed. It would be better, on the whole, to harvest the oats and to plow under the sweet clover between the first and the middle of September. The wheat and grass would presumably be sown between September 15 and twenty-fifth.

An additional application of fertilizer for the wheat and grass would be worth while. A 3-8-5 mixture, used at the rate of about 300 to 400 pounds per acre, should help to bring your land into good condition. In the case of the soy beans, the crop should be ready to be plowed under between September 1 and 15 and the land fitted and sown to wheat and grass as indicated.

If the land has not been limed for some time, it would be well to make an application of lime in order that the sweet clover or the soy beans, as the case may be, would have a fair start.—J. G. L.

To Get Rid of Scab

Could you tell me what to do for potato scab on clay bottom soil? I have used lime.—S. B. W., Bradford County, Pa.

Lime, wood ashes and other similar materials, by sweetening the soil, create conditions more favorable for the growth of the potato scab fungus. By making the soil sour, the conditions for the growth of the potato scab fungus may be made unfavorable.

The material that has given the best results for this purpose is commercial flour sulphur, preferably sulphur inoculated with such bacteria as will quickly change the sulphur into acid and increase the acidity of the soil to a point where it might not be injurious to the potatoes but will discourage the growth of the fungus.

The amount of sulphur recommended for the purpose will vary under ordinary conditions from 200 to 600 pounds per acre. For a clay-bottom soil that had had applications of lime the use of 500 to 600 pounds of sulphur per acre may be recommended.—J. G. L.

Spring Wheat Uncertain

Will you advise how to sow spring wheat? The land is last year's (1924) sod ground. It was plowed last summer and replowed last fall. Is it necessary to give wheat special treatment in order to prevent smut? Would you advise me to buy fertilizer? I do not have much money.—L. K., Broome County, N. Y.

Spring wheat is quite uncertain in the eastern states, hence, the growing of spring wheat in this region is usually not advised. Barley would be much more certain.

Should you decide to grow spring wheat after all, it would be desirable to use some fertilizer, preferably a 4-8-4 or a 5-8-5 mixture at the rate of 200 to 300 pounds per acre. Ordinarily, loose smut, which is the more troublesome type of smut on wheat, is not very serious in this part of the country. The hot water treatment commonly recommended is not entirely simple. For this reason, it would scarcely be necessary for you to try to treat the seed for loose smut.—J. G. L.

A Correction

THE American Cyanamid Company has advised us that the directions for killing woodchucks with Calcium Cyanide as given in their advertisement in Pennsylvania Farmer, issue of April 18, page two, were incorrectly stated. The directions should have read: "Place a heaping tablespoonful in the opening to each burrow" instead of "a heaping teaspoonful."

Milk and Butterfat Production Costs

Cow Testing Association Records Again Prove That High Producers Pay Best

By EARLE L. MOFFITT
Division of Agricultural Extension
The Pennsylvania State College

T ALWAYS pays more to grow the best, whether crops or livestock. The acre producing a all yield of a poor grade crop requires the me amount of labor to prepare, plant and cultie as the acre producing a big yield of first ality product. The animal that produces a big eld of a high quality product occupies the same m space and requires e same labor as the one oducing a low yield and low quality product.

Under any conditions, bor, capital and current penses are lost if a poor oduct is produced and der present conditions is is especially true. hen labor is scarce, exnses high and there is a eat uncertainty about e price to be received, l farmers should make a rious effort to eliminate om their business all anls or crops that do not oduce economically.

Should Keep Accounts

It is only by means of mplete accounts on the rm and cost accounts on e more important procts upon which he is deding for the major part his income, that the rmer is able to find out hich projects pay. Without accounts, farmers have ten increased or decreas- certain projects only to d themselves worse off the end of the year than ey were before. If we ve cost records we know hether a project is being rated at a profit, and if l, we can make an ansis to find out why and then change those ctices that are causing a leak in the business.

This is brought out forcibly in the case of two mers in one county who were growing seven es of potatoes each. One farmer used his own mmon seed, six tons of manure per acre, 200 nds of fertilizer per acre and did not spray at all. He received a yield of 89 bushels per acre of potatoes that were not of the best quality, at a cost of 70 cents per bushel. The other farmer secured disease-free seed, used ten tons of manure, 1000 pounds of fertilizer per acre, sprayed eight times and received a yield of 386 bushels of merchantable potatoes per acre at a cost of 39 cents per bushel.

If we assume that both crops were sold at the same price, 70 cents per bushel, the one man made 31 cents per bushel and the other just made expenses. In addition to this, the one man had an income per acre of only $62.30 while the other had an income of $270.20 per acre.

The first farmer expressed the opinion that he thought he was making more money on his potatoes than his neighbor because he was putting no expense on the crop and all that was made was profit. However, the figures on the crop showed that the opposite was true and he was losing most of what little expense he was putting on them. It was purely a case of getting more out of the crop by putting more into it.

Covers Four Years

All of the above discussion is true when applied to livestock. The accompanying tables on the comparative cost of producing milk and butterfat are figures secured thru thirty-five Pennsylvania cow-testing associations from 1918 to 1922 inclusive. The associations are distributed over about eighteen counties and are quite representative of conditions in the entire state. In each case, ten per cent of the net cost has been added to allow for the dairy's proportionate share of lost time, managerial ability and unassigned overhead. The milk tested, on the average, 3.8 per cent butterfat. Skimmilk is credited at forty cents per hundred weight.

The records of milk costs cover thirty-four cow-testing association years as follows: two associations ending in 1919; nine in 1920; fourteen in 1921; nine in 1922.

The records on butterfat costs cover thirty-five cow-testing association years, as follows: two associations ending in 1919; nine in 1920; fourteen in 1921; ten in 1922.

(Continued on page 29)

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Sympathy is the safeguard of the human soul against selfishness
—Thomas Carlyle

A Billion-Dollar Business

THE stockman, the grain man, the dairyman and the cotton grower may be inclined at times to sneer at the fruit and vegetable growers as being engaged in small business. The figures, however, tell a different story. The farm value of the fruit and vegetables grown in the United States in a three-year average amounts to over one billion dollars annually. Nearly one-fourth of this amount goes to California. Other states following in the order of their production are New York, Florida, Washington, New Jersey, Pennsylvania, and Michigan. The estimated value of apples and other fruit raised in this country in each of the three years is $508,000,000, and the value of potatoes and other vegetables amounted to $492,000,000.

No other line of agricultural products has experienced so great an increase in consumption per capita during the past ten years as fruit and vegetables. The better information on food values, the result of education along those lines, is no doubt, the cause of the rapid increase.

What Do You Like?

IT SHOULD go without saying that editors are anxious to please as well as instruct their readers. They realize that they must do the former before they can do the latter. We heard an elderly agricultural paper editor say once that he started out as an editor with the intention of filling seventy-five per cent of the space in his paper with what he thought the readers ought to have, and devoting the other twenty-five per cent to what they wanted. He did not go far until he found he must reverse the order of his division. While we get a good many comments and suggestions in the course of a year we would like to have more. We wish that we could induce every reader to sit down, go thru the paper from beginning to end, and write us just what he thinks of each department and feature. Which do you read most regularly? Which should be enlarged and which curtailed? What might, in your opinion, be left out? Which would you miss most if omitted? It would require so little of each one's time to write us such a letter and it would aid us so much in making Pennsylvania Farmer just the kind of paper our readers like it to be.

Taxes and Prices

THE promise of certain big interests to reduce prices if their taxes are lowered may be made in good faith and might be carried out. But the dear public still remembers the experience following the removal of the so-called nuisance taxes. The movies and many other places of amusement lowered the admission fees the amount of the previous tax for a short time only, but very soon the prices were restored to what they were when the federal tax was collected. In such cases the removal of the tax benefited no one but the theater owners. Of course, the government should collect no more than is absolutely necessary to meet its expenses, but the general public should benefit by the lessening of taxes instead of continuing to pay former prices.

Make the Soil Right

IF WE had to choose between a very stony field and a very cloddy field in which to plant a crop we would unhesitatingly choose the stony field. We know that every good farmer is of the same opinion, yet thousands of acres will be planted in poorly prepared soil this year, as is the case every year. The first operation necessary to good tilth in soil is proper plowing at a right degree of moisture. Ground that is plowed too wet and then allowed to bake into lumps is practically ruined for that season. The proper working of the soil before planting is necessary for best results. Too many farms are not equipped with the right kind of tools to put the soil in good condition. The very best plows, harrows, rollers and crushers are most economical in the end and no good farmer will try to do without them.

Freight Rate Changes

THE railroads of the eastern states are proposing some changes in freight rates on farm products that will affect practically every farmer in the East if put into effect. The general plan seems to be to increase the rates on the higher class commodities, and to decrease them on the more bulky products, such as potatoes, hay, fertilizer, etc. The Interstate Commerce Commission is holding hearings on the proposed rates. Those who wish to inform themselves on the possible effects of the new rates, should they go into effect, would do well to write to the Bureau of Markets of the Pennsylvania Department of Agriculture at Harrisburg for the booklet which this Bureau has issued on the subject. This publication presents in table form the present and proposed freight rates from the principal eastern shipping points to the leading market centers on the following commodities: potatoes, cabbage, apples, peaches, celery, lettuce, grapes, fertilizer, limestone, wool, tobacco, wheat, flour and hay. The most drastic changes proposed are large increases in the rates on peaches, celery, lettuce, grapes, wool and tobacco.

The Legislature Goes Home

ANOTHER session of the Pennsylvania Legislature has drawn to a close. During the few stormy weeks the state's lawmaking bodies were at work in Harrisburg this year 2073 bills were introduced in the House and Senate. Many of these bills were passed and are awaiting the action of the Governo

After finding that it had hurt its ow prestige, and not the Governor's, when it re fused to approve the appropriations for whic Mr. Pinchot asked in the budget, the Legi lature reversed its first action and grant practically all that was asked, and some b sides. No one can tell what the net result the recent session will be until the Governo has finished paring down the appropriatio bills and has decided which of the others will sign and which he will veto.

Evidently there is going to be a sizab sum available for carrying on the work tuberculosis eradication. But the rum ru ners are, no doubt, rejoicing that the Burea of Plant Industry will not have enough fun to enforce the right kind of a quaranti against the Japanese beetle. When booze a beetles travel in the same company, neith must be molested.

The New Milk Law

ON AND after May 25 of this year all mi served in Pennsylvania must be serv in the original bottle or similar contain This applies to restaurants, hotels, lun rooms, dining cars, etc. It is believed th this law will aid in the customer's receivi milk in a more sanitary condition. Milk is most hospitable host to every kind of bacter and since the air is more or less laden wi germs at all times it is but logical to conclu that the less milk is exposed to the air th more healthful it will be. The law will rigidly enforced.

Pennsylvania Land Values

WHEN the per acre value of farm la in Pennsylvania is compared with t prices obtaining in the corn belt area it wou seem that better bargains can be obtained the East than can be had in the Middle We This is all the more noticeable when the yi per acre is also compared and it is found th it equals or exceeds that of the much high priced land. The figures recently compil by the Pennsylvania-Federal Crop Reporti Service show the following average figu for the state: plowlands, per acre, $53; fa lands, with improvements, $77; farm la without improvements, $46. Plowlands h ing a value over $100 per acre are in the f lowing counties: Delaware, $100; Lancast $104; Montgomery, $102; Philadelphia, $ It is to be remembered, of course, that a la part of these prices are speculative values cause of their nearness to large cities.

High Grain Prices

WHEN the government's report April was published showing the w ter wheat crop to be far below that of l year and much below the average it was natural that wheat took a decided turn ward. Altho reports from most other co tries show about an average prospect, prospects for a crop in this country of 1 000,000 bushels below last year's crop at o affected the price thruout the world. T price of other grains advanced in sympat and the market wiseacres prophesy a m stable grain market condition than has ex ed for several months.

Washington Letter

GERMANY TO STRENGTHEN I FARM INDUSTRY.—The leading though Germany, France and the countries of cent Europe at this time is that they may bec self-sustaining nations, according to Eldon Shoup, agricultural commissioner of the U Department of Agriculture at Berlin. fore the World War Germany's chief aim w

---

be the leading industrial nation, nufacturing for export, and her iculture was neglected. Now the dency is to develop agricultural duction to an extent comparable h industry, so that the nation not be dependent upon other ntries for anything. The cost of ng is high in Germany, and Mr. up does not believe that Germany become a serious competitor of domestic manufacturers in the ted States under our present tar- law.

UCH ACTIVITY IN WASHING- N.—The elimination, consolida- and rearranging of old offices bureaus and creation of new ones usually takes places when there change in the presidency is now There are indications that under Coolidge administration economy play a large part in the shuf- of offices, not only in the execu- departments but the indepen- agencies of the federal govern- t.

AY KILL MANY BOARDS AND MISSIONS.—A new economy ey ordered by the President in- es the United States Shipping rd, Federal Trade Commission, Finance Corporation, office of n Property Custodian and others, e forty in all. While these inde- dent agencies have been created pecial acts of Congress, it is said President thinks that some of might well be abandoned or gated to some department or au. It ought not take much per- ion on the part of the Adminis- ion to convince Congress that it ld be doing a very popular act in cing the number of offices.

ARDINE ALSO MAKING NGES.—In line with the Presi- t's economy program all the of- in the Department of Agricul- having to do with the business inistration and personnel have consolidated by Secretary Jar- into a single unit, with Dr. W. Stockberger, director. The three r main divisions are those of tific work, headed by Dr. E. D. ; regulatory work headed by W. Campbell, and extension work ed by C. W. Warburton. These s, it is explained, act in the ca- ty of clearing houses for depart- tal activities, assuming much of detail work formerly carred by secretary. Under this plan the etary is given opportunity to de- more time to the consideration neral agricultural policies.

HICK BUSINESS HIT BY POST- RAISE.—Just now the raisers y-old chicks are the leading vic- of the recent postal rate in- e. They say that their prices baby chicks are fixed in the fall ch year, and that the new rate using them heavy losses. It is believed that this increase in el post rates will give the express panies a new lease of life.

ALIFY AS SHEEP SHEARERS. lesson in sheep shearing was re- y given Secretary of Agriculture ne by Senator Warren, of Wy- g, and Senator Stanfield, of Ore- The event took place at the rtment of Agriculture's Belts- farm near Washington. Sen- Stanfield and Warren are ex- ve wool growers, each owning s of 50,000 sheep.

e Senators and the Secretary, on [illegible] the [illegible]'s canvas coats and be- the [illegible] of shearing. Experts [illegible] say they did a good qual [illegible] for a position on any p farm.—E. E. Reynolds.

Harrisburg Letter

TWO M[illegible] IONS LIKELY.—Altho Legis[illegible] passed the H[illegible] provi[illegible] $3,000,000 for pay t of [illegible] to owners of cat- killed to prevent the spread of culosis it is probable the bill will be approved for $2,000,000, the sum for which the Department of Agriculture officials hoped at the beginning of the session. The Bureau of Animal Industry has been getting ready for the biggest campaign in state history against bovine tuberculosis and with considerable money voted from the dog license fund it is now in shape to undertake examinations on an extensive scale. Work will begin very soon and it is planned to ask the next legislature to be even more liberal so the state may be cleaned up.

PLAN FERTILIZER RULES.—The Department is also getting ready to make effective the new fertilizer act, which is to become operative January first. In brief this bill provides that Pennsylvania fertilizer must contain fourteen per cent of plant food. It is a big advance and when it is considered how legislation dealing with this subject was handled a dozen years ago it seems remarkable. The new insecticide act also will be given attention and all such mixtures will have to bear proper brands. The new paint bill brings rulings and regulations on paints, etc., down to date, nothing else.

CUT BEETLE PLANS.—Owing to the manner in which the general appropriation bill was tossed around in the final month of the legislature only $100,000 is available for fighting the Japanese beetle and Director C. H. Hadley, of the Bureau of Plant Industry, is getting ready to launch his quarantine. Plans will have to be trimmed because they were made on a $150,000 scale and there were hopes of federal aid which is not forthcoming. It will mean an intensive campaign and probably some differences on patrol methods.

VILLAGES CARED FOR.—Among the legislative acts featuring this session have been measures providing for better lighting, fire protection and other things for villages. The number of bills of purely rural character ran higher than ever known before and many of them will be in the pile awaiting action by the Governor, which must come by May sixteenth.

POWER PLANS AT STANDSTILL.—The net result of the legislative refusal to enact the giant power program has been to stop proposed schemes to bring the rural phase to public attention. The bills providing for electric districts and electric mutual companies will be reintroduced in 1927 by the state administration. Until then there will probably not be much doing.

COURT TO RULE.—The Dauphin County Court will pass upon the question when the forestry and other proposed bond issues will go to the people for action. General opinion is no amendments will be voted upon before 1928.—Hamilton, Harrisburg.

New Jersey Letter

TOMATO CROP LARGER.—Farmers in southern New Jersey, Gloucester County, particularly, report a considerably larger crop of tomatoes this year, altho indications point to a crop not up to the record season of four years ago. Business at the canneries promises to be brisk and efforts are being made to locate canhouses at new points in central and southern New Jersey. Increases in such other trucking crops as sweet potatoes, peppers, and sugar corn are also reported. The pepper acreage centering in Atlantic and Cumberland Counties is estimated at 9000 acres against 6000 acres as the usual acreage of this crop.

FARM ENGINEERS MEET.—The New Jeresy State College of Agriculture sent Professor E. R. Gross of its Rural Engineering Department to the meeting of the American Society of Agricultural Engineers at Cornell University, April 10 and eleventh. New Jersey is interested in the development of power and light on New Jersey farms and its representation in the society is bringing New Jersey farmers into closer contact with modern farm equipment and power farming methods employed satisfactorily in many other states. Professor Gross is taking part in the organization of a North Atlantic section of the society including the states from Virginia northward, which will focus its attention on the problems pertinent to eastern conditions.

APHIS DAMAGE FRIUT TREES.—The apple aphis is doing considerable injury to apple and peach trees this spring in western New Jersey's fruit belt. Fruit growers have been spraying more thoroly than usual and with good weather conditions for spraying and dusting little permanent damage from general fruit tree pests is expected. Nicotine sulphate and fish oil are being used most generally in meeting attacks of the aphis.

MANY FOREST FIRES.—Forest fires thruout New Jersey have been particularly severe this year, apparently no section escaping some damage. In the southeastern part of the state large areas of timberland have been destroyed. Some damage to barns and houses has resulted. Organization for fire protection, coupled with more general insurance of farm properties, however, are bringing less permanent loss to farmers than in former years.

HOLSTEIN BREEDERS' NOTES.—The April tour of the Somerset County Holstein Breeders' Association will include a visit of the membership to the Brentwood Farms and sale at Abington, Pa. In June a Holstein judging demonstration will be held at Suydam Farms, Franklin Park, N. J. In August the association will conduct a tour to the Essex County Hospital at Cedar Grove, where an inspection of the dairy herd will be made. The fall schedule includes the consideration of practical problems such as concrete on the farm, and the association will close its year with an annual meeting and banquet in December.—B.

New York Letter

FERTILIZER SHIPMENTS PARALYZED.—Refusal of tug-boat crews in Baltimore, the center of the fertilizer industry, to handle fertilizer shipments has nearly paralyzed the industry. Even tho the strike should end immediately shipments would be two to four weeks late. Strikers have prevented other boat owners from helping in transportation. The G. L. F. Exchange of this state has a deep water plant in the harbor, and many of its farmer customers will seed as usual and use the fertilizer as top dressing when it does arrive.

FARM BUREAU SAVES FARMERS FREIGHT EXPENSE.—Tho the danger is not yet removed, the Farm Bureau Federation of the state, thru its representative, G. Thomas Powell, has so far prevented western hay growers from raising New York state freight rates on hay. Another attempt will be made by Michigan growers before the Interstate Commerce Commission to secure preferential rates. New York farms look to the Federation to protect their interests.

RURAL DISTRIBUTION OF ELECTRICITY.—The conference on electricity for rural sections just held at Albany decided that rates were the crux of the situation and that the extension of lines is highly desirable if the better class of rural citizens is to remain on the farms. Possibilities of developing water power resources for this purpose were discussed. A representative of the Public Service Commission stated his belief that rural service is as necessary as urban.

SPRING PROSPECTS.—Dairy farm pastures are better than in 1924. Farm labor is more abundant at about the same prices. The number of cattle is considerably less. Milk prices have been the best in years, but are expected to go down with the increased production due from now on. Spring work is about two weeks ahead of the usual season as temperatures have been warmer than usual. Potato planting is well along on Long Island. Winter wheat injuries are not serious.

RURAL YOUTH PERMITTED TO DRIVE.—A bill has become law [illegible]

County News and Comment

Armstrong County, Pa.—Almost all plowing is done and about one-half of the oat area has been seeded. Pastures are starting very slowly but new clover meadows are making an encouraging start. Orchards are showing promise of a full bloom. All spring crop areas will be somewhat less than last season. The purpose is to farm less and plow and till better. Rough feed has been abundant but some will not have corn, oats and wheat sufficient to meet demands. Potato seeding will commence in the concluding days of this month. About twenty per cent of the potato growers have ordered certified seed from northern counties. Such seed is costing about $1.75 per bushel at shipping point. Baled straw, $14; good baled hay, $16@18. No wheat for sale. [illegible] No corn for sale. Home-grown potatoes of good size and quality [illegible] $1.75 per [illegible] [illegible]—W. M. [illegible], April [illegible]

Carbon County, Pa.—[illegible] School children planted several thousand seedling trees furnished by the Department of Forests and Waters for reforesting purposes. Butter [illegible], eggs 28c, old chickens, 28c, milk, 7c qt.; potatoes, 40c bu. Dairy feed somewhat lower in price.—L. E. B., April 15.

Chautauqua County, N. Y.—Most of the June graduates from all western New York start tonight for their ten-day trip to Washington, D. C. Hens have laid poorly all winter. They are doing better now and eggs are down accordingly. The present price is 27c. Butter is [illegible]. Grains and ground feeds continue to be high priced. Fruit and grain farming promises more profit than livestock. [illegible] undoubtedly it will be overdone, as is so often the case with anything that pays. Here in the village [illegible] a better spirit of cooperation than they had back on the hills—[illegible]

Chester County, Pa.—[illegible]

"Get out o' here!"

—that's what seed corn, when coated with Stanley's Crow Repellent, says to crows and pests

and they do GET!

You don't have to plant twice as much seed, sort o' feeling that crows will pull up half of it. You don't have to put up scare-crows, and then keep a shot-gun handy to kill off the crows that have built nests right in the scare-crow's coat pocket. No sirree; you just buy a can of

Stanley's Crow Repellent

then mix it thoroughly with the seed corn, and plant it at once. No waiting for it to dry. And it positively will not clog the planter! Non-poisonous. Won't injure the seed. Won't kill birds or animals. BUT,—it WILL keep them out of your fields, absolutely. It WILL save you all loss of time and expense in having to replant. It WILL let you get 3 bushels of corn where now you've been getting only 2. Because, no crows, moles, gophers, chucks or squirrels will touch any seed corn, nor the young sprouts, that have been coated with Stanley's Crow Repellent. And thousands of corn-growers will gladly testify that it does all we claim for it. "Money Back" guarantee. Large can, enough for 2 bu. of seed corn (8 to 10 acres), $1.50. Half sized can, $1.00. If your hardware, drug, or seed store doesn't have it in stock, order direct. Address, Cedar Hill Formulas Co., Box 500R, New Britain, Conn.

Mead CYCLE COMPANY DEPT. A-209 CHICAGO Write to us today

The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

TWO readers of this column write to say that the cutaway type of harrow is indispensable for properly discing unplowed ground. One expresses his surprise that we do not have one at Neshaminy Gardens. The reasons given by the writer bear out my observation in regard to the cutaway type and we shall buy an orchard disc later. This disc is spread apart by an iron frame inserted between the two halves, enabling one to disc under tree heads. We purchased an ordinary disc at a sale the other day for temporary use but the discs are only twelve inches in diameter instead of sixteen inches and it tends to choke up when working in the orchard where a heavy cover crop stands.

✦ ✦ ✦

WE finished setting our two acres of asparagus on April third. It was covered lightly and is already coming up. A liberal application of high-grade fertilizer will be applied in the furrows and more soil worked in. The trench will be entirely filled by frequent cultivations. The furrows were made by using the plow and tractor, setting the plow as deep as it would go and returning in the same furrow. The plants were set and covered by hand. It is necessary to spread the roots out flat on the bottom of the furrow or they will not grow. I set a few plants a few years ago and stood them upright, not knowing any better, and they never did any good.

✦ ✦ ✦

THE weather has been breaking just right for us so far this spring. After we finished planting asparagus and three bushels of our Cobbler potatoes it rained. Today, April 14, they will finish setting the 5000 strawberry plants and the clouds and the weather man promise rain this evening. Setting strawberry plants is something of a gamble unless one is prepared to water them in. There was no rain for three weeks after we set our bed two years ago and the plants nearly all died.

✦ ✦ ✦

NO information has been received so far as to the effect of the severe freezing last winter on peach trees. In our own orchard we notice a few dead twigs, the very small ones, the damage is negligible. An joining neighbor finds his practi all dead, or at least killed back the trunks. His few trees were pl ed two years ago and flowers garden truck were raised betw the rows. These were highly ferti ed and cultivated late into the The result was a heavy growth (were much larger than our planted at the same time) and probability is that they were not ficiently mature to stand the win He proposes cutting them back stubs to see whether or not they start new heads.

✦ ✦ ✦

WE have started a simple sys of cost accounting which we will to carry out with the crops gro at Neshaminy Gardens. It is kno as the card system and is used various ways in business offices consists of a box of ruled cards dividing cards to serve as an in One or more cards is devoted to crop; they are arranged alphabe ally in the box. All that is nece to keep the system is to sit down the evening, take out the cards voted to the crops on which w was done and note on them the the fertilizer, the labor, etc., app to them that day. It requires few minutes and is easily When sales are made the amount ceived will be noted on the card. This may not be an orig use of the card index system but is new to us so far as farm acco ing is concerned.

✦ ✦ ✦

SINCE starting our new far venture two years ago we have trying to learn from truckers, fa ers and fruit growers which paid best, but have been unsu ful in receiving any definite info tion. It is true that returns from year to year and what best one year may be produced loss the next year, but we find the average man knows little bey the general outcome of all his and simply guesses at which most, or least, profitable. We are ing to try to do better than th R. P. K.

A man went to see his phy for advice as to how to be cured the habit of snoring.

"Does your snoring disturb wife?" asked the M. D.

"Does it disturb my wife?" the patient. "Why, doc, it dis the whole congregation."—The worth Herald.

THE CHEERFUL PLOWMAN

Starting Right

I STARTED right, I'll say, spring: I cleaned and poli everything. I toned up all my and plows, I fixed the [illegible]es for cows; I mended ragged halter and trimmed the horses' tails manes; I patched up holes in bags and did some dental work drags.

I sewed up sieves in [illegible]ning and welded forks and [illegible] dr I plumbed up buckl[illegible] bars, bolts, and patched the mangers for the colts. I put new hook[illegible] on doub trees and liniment on horses' knees; I replaced feeble neck-[illegible] rings, crepit rods and other things; I lined up dizzy wagon wheel[illegible] and trea corns on Dobbin's heels.

I greased all rigs that groaned and squeaked, I plugg[illegible] bins th warped and leaked; I dusted off the water jugs and reinfo[illegible] [illegible]one weat- zled tugs; I nailed new boards on broken racks and sorted o[illegible] and sacks.

I fitted locks on cow-barn doors, replaced some spl[illegible] two- fours; I scanned my stuff from A to Z, and had a real repairing spree. I was ready, doubly so, I knew, to plow, and disc, and sow.

The time was well and wisely spent, it gave a feeling of content. It will come back twenty fold in minutes saved as well as gold.—I Edw T

Low Grade Fertilizer

AN AMENDMENT to the state fertilizer law passed by the recent legislature and signed by Governor Pinchot on April 2 prohibits the sale in Pennsylvania of any mixed fertilizer or mixture composed of two or more ingredients containing less than fourteen per cent of total plant food. It likewise provides that no commercial fertilizer shall be sold which contains less than one per cent of ammonia, one per cent of available phosphoric acid or one per cent of water soluble potash.

This amendment is designed to prohibit the sale of those low grade mixed fertilizers which contain unnecessarily large amounts of filler, states James W. Kellog, chief chemist, Pennsylvania Department of Agriculture. In the past approximately fifty per cent of the total tonnage of this class of fertilizer contained excessive amounts of filler and farmers have consequently paid freight on a vast amount of material which had no plant food value.

Fewer Mixed Fertilizer Brands

Another valuable feature of the amendment is the fact that the number of brands of mixed fertilizer will be greatly reduced and farmers will find it less confusing to make purchases. Still another feature is the fact that the law as amended will enable farmers desiring to purchase fertilizer for tobacco to have the assurance that such special brands will not include potash in the form of chlorides. This is extremely important since it has been demonstrated that potash in the form of chlorides in fertilizer injures the burning quality of tobacco.

The amendment will become effective January 1, 1926.

Fill up the Gullies

THIS is the time of year when the gullies which have been washed in fallow fields should be closed so that they will not become worse. Stones are poor material to use as they will interfere with future plowing. Corn stalks, when laid properly, make good ditch-closing material. They catch and hold the dirt until it can set and grass or grain roots grow over it. The stalks should never be laid lengthwise in the ditch, but crosswise. Several stalks should be placed at many places. If the ditches are deep, manure first should be put in the bottom. Plow or shovel dirt on the stalks and sow plenty of seed over it. Timothy and alfalfa are the best grasses to sow for this purpose.

It is well to use manure liberally where seeding is done on such places, as the soil is nearly always thin where it washes badly. It pays to do a good job in the closing up of gullies since they make farming and hauling over them difficult and sometimes dangerous. If plenty of humus is introduced and the soil made deeper gradually by deep plowing there will be less tendency to wash into gullies.—A Farmer.

Much Interest Shown

OVER 2700 farmers visited the soil-laboratory car operated by the New York Central Lines in northwestern Pennsylvania during March. These farmers brought 1500 samples of their soil which were tested in the car for lime requirements. The need for lime was found much greater than had been supposed. A total of 150 sweet clover demonstrations, involving the distribution in the thirteen counties of four carloads of lime and a ton of sweet clover seed will be started as a result of the interest created in soil improvement.—J.

DODGE BROTHERS COACH

A popular and attractive addition to Dodge Brothers line of motor cars.

Every coach convenience is provided: unfettered vision on all sides, an intimate yet roomy interior, easy handling in traffic, protection for children against open rear doors, modish hardware and finish, balloon tires and smart whipcord upholstery.

Built on Dodge Brothers sturdy chassis, the Coach will deliver years of dependable service at a very moderate annual cost.

It is available both in the Standard and completely equipped Special types.

For Apples

NOW IS THE TIME TO APPLY

NITRATE OF SODA

2 pounds to 10 pounds per tree according to age and condition

University of Illinois Circ. No. 233 says:

"It has been amply demonstrated that nitrogen is usually the controlling factor in Apple production.

"Among the more strictly commercial fertilizers mentioned, Nitrate of Soda has come into the widest use for orchard purposes and has sufficiently proved its value in many experimental and commercial orchards to warrant a rather general recommendation of its use in unproductive apple orchards."

Missouri State Fruit Experiment Station Fruit Notes No. 9 says:

"For immediate results there is probably nothing that will excel Nitrate of Soda in the sod orchard. The standard recommendation is five pounds for a mature tree which can be increased or decreased to suit conditions.

"In many cases this chemical has shown itself to be the only one that is of direct assistance to the tree."

Arkansas Experiment Station Bulletin No. 181 says:

"The yield of apples has been materially increased by the timely use of quickly available nitrogen.

"The best results have been obtained by using about 2½ pounds of Nitrate of Soda per average tree for early application; and about the same amount for the June drop application.

"Nearly the same results have been had, however, by using 5 lbs. at one application and applying it early."

From New Hampshire College Experiment Station Technical Bulletin:

"It is also well known that nitrogenous fertilizers, especially the more readily available forms such as Nitrate of Soda, will bring about increased growth of the trees."

Director McCue of the Delaware Experiment Station says:

"These studies verify the results which have been obtained in other states that nitrogen is the limiting factor in production of apples and peaches."

Maryland Experiment Station Bulletin says:

"Of the three materials, Nitrate of Soda or some other quick acting nitrogenous material is most likely to give direct benefit."

Ohio Agricultural Experiment Station Bulletin says:

"Quickly available nitrogen is clearly the determining element in successful orchard fertilization on thin; poor upland soils such as abound in the hilly regions of southern Ohio."

"The addition of 2½ lbs. of Nitrate of Soda per tree to the regular application of 2½ lbs. Nitrate, 5 lbs. Phosphate and 2½ lbs. Potash per tree gave a gain of 24 barrels of apples per acre per year."

Peaches, Pears and Cherries respond equally well.

This is but a small part of the evidence from undisputed authorities that

IT PAYS TO USE

NITRATE OF SODA

and to use it liberally early in the Spring

If you wish to have our Bulletins on the use of Nitrate of Soda, put your address on the coupon and mail it to this office.

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser

Manager Pomona Gardens, Newark, Delaware

When Shall I Plant?

What is the right time to plant kale, oyster plant, and parsnips?—L. M. P., Gloucester County, N. J.

Kale is satisfactory only as a fall and early spring crop. Scotch kale can be sown about July 1 for use in the fall, and in mild seasons will stand the winter and give a small crop in spring. Siberian kale is hardier and will endure the winter if sown about August 15-31.

Salsify and parsnips are planted as early as possible in spring, if the largest roots are required. They may be planted up until June 1 but the later the planting the smaller the roots, and it is easy with salsify to get roots so small as to be worthless, since at best the roots are not very thick.—W. C. P.

Tomato Plant Spray

CAREFUL tomato plant growers are preparing themselves to dust or spray the plant if flea beetles appear. Even large plants grown in greenhouse or hotbed are injured by the beetle in some seasons, and it is thought that the beetles spread disease.

Combinations of bordeaux mixture and a poison are used for flea beetle, either in powder form for dusting or as a spray. Plain lime, or almost any kind of fine dust, seems to discourage the insect, but by using a combined insect killer and disease preventive several benefits are obtained at the same time.

Open-air tomato plant beds have to be watched carefully to determine when the first seedlings appear. Sometimes the flea beetles are right on hand to welcome the first comers; again, they appear much later in the season.

It takes about twenty pounds of commercial dust in a hand machine to cover an acre. More is still better, and the cost of the dust is less than ten cents a pound when bought in quantities of a hundred pounds.—W. C. P.

Canning House Beets

We are figuring a bit on how profitable a crop of canning-house beets would be. There are several uncertainties in growing beets, at least figuring profits beforehand. W would expect from 160 to 200 bushels of small sized beets to the acr and if these bring fifty cents a bushel, the total receipts are easy know.

The chief item of expense, asi from ten or twelve dollars for fertilizer, would be the weeding. Th beets are not to be thinned, but almost surely some hand weedi would be needed. If more than on such weeding had to be given, a the joy would be taken out of th crop.

When to Plant Seed

The seed would be planted arou the first of August, and at that tim the principal weeds would be smart weed, chickweed, purslain, and fa grass. All of these are plentiful good ground, and the purslain is extremely hard to get rid of in a w season.

Then, too, there is the question drought. These beet seeds would into the ground at a time when dr weather often prevails, as folks kno who try to get alfalfa started or wh have late celery still unplanted that time. Getting a good stand plants and weed control at small expense seem to us the chief proble in the growing of fall beets for canning.—W. C. P.

Top Dressings

IF FOR any reason the early cabbage and cauliflower were set the field without the usual amou of manure or fertilizer, they can given top dressings quickly and fectively at any time until they a about half grown. Of course, if o is rushing the crop for an early market, the quicker the needed fertilizer can be applied the better.

Mixed fertilizers or nitrate of so are useful for this purpose, dependi upon the treatment that has alrea been given the land. If the spri proves cold and a legume sod is being depended upon to provide so of the nitrogen, probably extra nitrogen, as nitrate of soda, sulphate ammonia, will prove profitable. hundred pounds to the acre w show results, but 200 pounds is too much. Both cabbage and cauliflower are less easily injured by fertilizers on the leaves than are lettuce and tomatoes.—W. C. P.

This Method Saves Tired Backs

With puncher and tongs experts can set plants quickly but it takes experience to do the work well.

Holding Back Growth

NEARLY every spring there comes a time when we need to hold ck the growth of plants to prevent from growing too large for use the field. This is especially true tomato plants, because the hard- plants like cabbage can be plant- out in less favorable weather, and be held back in growth by ex- re to cold and drought that ld injure tomatoes.

Many growers cut back the tops tomato plants, aiming not so much cut out the central bud as to shear ay some of the larger leaves. Done th skill, this operation seems to ve the purpose well.

Other growers who think this aring injures the plants try grad- l exposure to cold to hold back wth. That can be done if the ather man provides the necessary l nights at the time we wish to train our plants. In early May, wever, as likely as not the days e so sunny and warm that the nts grow too rapidly even when y are entirely exposed.

Hold Back the Water

A third plan is to hold back water, necessary practice under any con- tion, to harden the plants for field e. This can easily be overdone, when it is carried to the ex- me the plants do not quickly take ld when they are set in the field.

A fourth plan is to cut between e plants with a knife, to cut off e long roots. This is not so much e to hold back top growth as to se the formation of new roots r the cut points, but it does pro- de a gentle brake upon very rapid wth. If it is done a week or ten ys before the plants are to go to e field their condition for easy nsplanting is likely to be greatly proved.

Still another plan, which like the t one is chiefly designed to im- ve the root system, but which al- restrains growth a little, is to dercut the plants several weeks fore field planting. To do this one ns a knife blade from one side and an angle so that some side roots d the tap roots are cut off. When is practicable to water the plants ter this operation, the roots on th sides may be cut on the same y, but if no water is at hand only e side should be treated at one e, the other side a week later. This vents too great a check and per- ps severe wilting.

When It Is Practicable

This undercutting is practicable th canning house plants started in mes and standing rather close to- ther in the rows. Under these con- tions, if the ground is very rich d plenty of water has been used, e root system may consist of little a tap root, and a treatment like s undercutting is helpful to induce nching of roots. It is a substitute transplanting.

Even in large scale tomato plant wing undercutting would often helpful, altho it is doubtful ether the average plant buyer uld be willing to pay any more the year for plants treated in this y.—W. C. P.

Worthley at State

MR. H. N. WORTHLEY, formerly with the Massachusetts Agri- tural College at Amherst, has ned the extension force of the nsylvania State College and will vote his time to insect control rk in the state. He will work with E. Hodgkiss, entomology exten- n expert, and fill the vacancy sed by the resignation of D. L. n Dine who is now field director the Tropical Plant Research ndation, in charge of the field vestigations for the control of ar cane insects in Cuba.—A.L.B

Large, Luscious Blueberries Tempt the Buyer

FOR many years the consumer has been buying on the market the ordinary swamp huckleberries gathered in the swamps and other wild sections by people who make their living largely by this means. Within the last few years, however, there has appeared in the New York and Philadelphia markets a fancy grade of blueberries which have been developed for size and the absence of seeds and which are grown and cultivated on a commercial scale.

These enlarged blueberries are actually improved wild huckleberries which have been obtained by years of experimental work carried on by Miss Elizabeth White, of Burlington County, New Jersey. Since 1910 this work has been conducted by Miss White on her father's six-hundred-acre cranberry tract. In this painstaking enterprise she was assisted by Mr. Frederick V. Coville, of the U. S. Department of Agriculture, who has spent much time in studying the blueberry and methods of propagating it.

Secured Selected Stock

The improved blueberries were started with the selection of wild plants in order to obtain bushes having unusually large berries as foundation stock for breeding. In order to obtain exceptional bushes from other sections of the country, $50 was offered for each plant having three or four berries three-fourths of an inch in diameter or as large as a cent.

In addition to the plants propagated from the wild bushes many seedlings from the U. S. Department of Agriculture also were set. The main object was to get large berries and have them as seedless as possible. While the well-known berries from wild plants are small, occasional berries from the cultivated bush are three-quarters of an inch in di ameter, and over ninety per cent wi exceed half an inch across. In addi tion, these cultivated berries hav seeds so small as to be almost un noticeable, while ordinary huckl berries frequently seem to contai nothing else.

The Three Conditions Necessary

It has been found that the thr conditions necessary for the success ful raising of blueberries are a pe and sandy soil, so acid as to be pra tically useless for ordinary agricul ture, good drainage and an even su ply of moisture. On wild blueber land, of which there is many thou and acres along the Atlantic sea board, the acidity is naturally ke up, but where soil has to be speci prepared for blueberries it is nec sary to add fresh leaves or oth vegetable matter each year to mai tain the proper acid condition.

Blueberry plants are most succes fully grown on soil that is alwa damp but never soggy wet. They re quire a continuous supply of mois ure, but become sick when they ha "wet feet." The foliage will indicat when the plants have the righ amount of water by keeping rich green till frost colors it. When th plants are too dry the edges of th leaves wither and turn brown a when too wet the leaves become r or purplish during warm weath However, if the plants are drain soon enough these same red lea turn green again.

The plants are set out any tim after frost is out of the ground a should be placed at least four f apart, otherwise the branches a ely to interlace within three or r years and make picking difficult. is believed that to obtain the maxi production per plant, they ould be placed eight by eight feet.

A blueberry plantation on land heretofore unproductive.

Blueberries three-quarters of an inch in diameter are now a reality

Setting Out the Plants

The picking of this crop begins ut the first of July and extends to middle of August, thus coming ad of the cranberries which be to ripen in September, and per tting the growing of the two crops h an equal distribution of labor.

Some of the pickers can pick from nty-five to one hundred quarts a . The berries are placed in quart es and packed in regular berry tes holding thirty-two boxes, each being covered with a square e of heavy brown paper bearing distinctive label advertising the wer's special brand. Altho the cul ted blueberries carry better than wild ones this method of market has proven very satisfactory and rants the extra time and expense cially when catering to a high s trade. In 1920 the yield from lve acres exceeded 500 bushels. s production was largely from ll plants yielding for the first or ond time.

Storage Meeting

URING the forenoon of the Farmers' Field Day to be held the Marble Laboratory at Canton, dford County, Pa., on May 1, tors will inspect the storage ex ments that have been in prog during the winter.

Mr. Marble has made a very close dy of potato storage methods. He pped to his laboratory last fall a e quantity of Potter County po oes, which have been held during last few months under almost types of storage conditions. De led records and observations have n made regularly thruout the on. The great variation in loss indicate very clearly which thods of storage carry the pota thru the winter in best condi n.

Afternoon's Program

ndwiches and coffee will be ved at noon. Beginning at 1:30 M. there will be a program of dis ions by the following men: Ad s, Hon. F. P. Willits; Mature sus Immature Seed for Planting, lliam Stuart; Fundamentals of tato Storage, L. M. Marble; Stor Requirements for Certified Seed, A. McCubbin; Coudersport Ex ience with Storage, Bert Straw; perature Control in Bank Cellar rage, R. D. Anthony.—W.

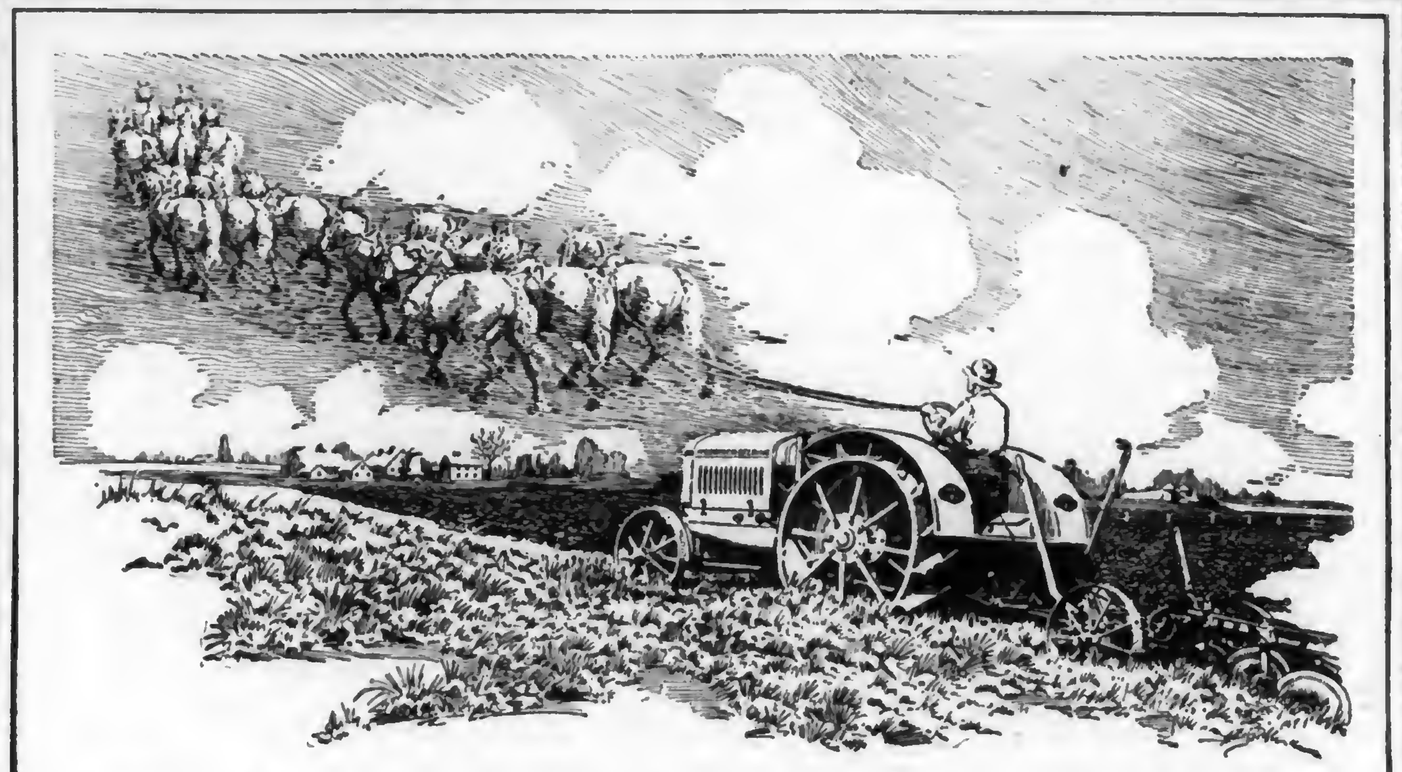
The Apple Maggot

HE apple maggot, one of the in sect pests causing wormy apples ich is more or less general thru the state, is the subject of a cir ar just issued by the Pennsylvania rtment of Agriculture. This in is often known as the "railroad m" due to the habit of the mag making irregular dark colored rows or tunnels thruout the pulp he infested apple.

Control of Insect

This destructive insect can be con lled. The recommended control asures are divided into the follow three important steps: 1. Pick up destroy all fallen fruit. 2. Cu n wild or volunteer apple trees ich cannot be properly cared for. Follow the poison spray schedule given in detail in the circular.

The circular was prepared by T. Guyton and J. N. Knull, entomol ists in the Bureau of Plant Indus It is sent free to all persons in state requesting it.



They're On the Job When You Need'em
—and Cost No Feed When You Don't!

THIS is the day of "steel horsepower," when men direct the power of sturdy horses through the simple twist of a steering wheel. City streets and country roads swarm with proof of this statement. And if you will cast your eye over the countryside you'll find thousands of examples wherein "steel horsepower" is the drawbar and belt power that operates modern-day farms at top efficiency.

What kind of power will you depend on this year? Will you rest content with plodding horseflesh, or will you enter a new era of progressive farming with a new McCORMICK-DEERING TRACTOR at the head of your program?

Think of your plowing, your tillage work, your haymaking, your grain harvesting and threshing, your corn harvesting, and the hundred and one belt jobs that must be done one way or another during the coming years. Consider what it will mean to you to put these operations out of the way quicker, more profitably, and more pleasantly with a McCORMICK-DEERING TRACTOR!

And don't forget, there is a complete line of McCormick-Deering farm-operating equipment at your command—tools built to work especially well with McCormick-Deering Tractors.

We shall be pleased to forward a tractor catalog to you, on request, in which all mechanical details are explained fully and illustrated simply. Or, if you prefer, call on your local McCormick-Deering dealer.

A GRO-MOR JR. Cultivator Will Pay for Itself in 30 Days

It is the greatest labor-saving tool ever used by the vegetable grower and while not a plaything, an average 14-year-old boy will do 3 to 6 times as much work as a man with a double-wheel push-plow, and do it better.

Will cultivate smaller plants and closer to the row than a push-plow and eliminate 50% of the hand weeding.

With it you get deep, level, perfect cultivation, stimulating plant growth and conserving moisture. It will do much better work than the push-plow when the soil is hard and crusted.

The GRO-MOR JR. *solves the labor problem*

The Gro-Mor Jr. will seed 3 times as fast as the single seeder and do a better job.

Mr. C. Born, Mgr. Riverdale Market Gardens, West Springfield, Mass., writes:

"After using the Gro-Mor Jr. for the past season will say that it will save in seeding 75% of the work, and in cultivating 50%, and that we are more pleased with the work that it has done, so well in fact that we have added two more outfits to our equipment."

With a 15-inch clearance the Gro-Mor Jr. can be used at all stages of growth and with 12-inch centers will work perfectly, rows planted 12 inches apart and 10-inch rows can be worked until plants near maturity.

The Gro-Mor Jr. is strongly built, of the best of materials, by experienced mechanics, weighs 190 lbs., and will give long and economical service. It is driven by a four-cycle engine, air cooled, with multiple disc control.

Any of the Planet Jr. hand machine tools can be attached to the Gro-Mor Jr.

The price of the Gro-Mor Jr. places it within the reach of every grower. Write today for full particulars, without any obligation on your part. We can make quick deliveries and probably have a distributor or dealer near you.

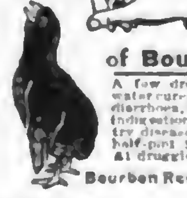
How to Stop Chicks Dying

Put this in the drinking water

If you are one of the many readers who are losing baby chicks, read this letter received from Mary J. Vincent, of Sweet Water, Ala. She says:

"I used a package of Avicol and was so well pleased with it that I hardly know how to say enough for it. It beats all I ever saw. Before I used it, I was losing half my hatch. I haven't lost a one since. I don't think I will ever be without Avicol if I can help it."

There's no doubt that Avicol is wonderful both for preventing and stopping disease in baby chicks. It has a specific action as a bowel antiseptic and regulator. Usually within 48 hours, the sick, droopy chicks are lively as crickets. A liberal supply of these tablets can be obtained by sending fifty cents to The Burrell-Drugger Co., 551 Allen St. Indianapolis, Ind. As Avicol is positively guaranteed to do the work or money refunded, it costs nothing to try. Readers will be surprised at the way chicks grow and develop, in vigorous health, when these tablets are used in the drinking water.



One Drop of Bourbon Poultry Remedy **Cures Gapes**

A few drops in the drinking water cures and prevents white diarrhoea, limberneck, cholera, indigestion and other poultry diseases. Small size 60c, half-pint $1, full pint $1.50. At druggists, or sent by mail.

Bourbon Remedy Co., Box 8, Lexington, Ky.

DO THIS FOR—
CHICKS' BOWEL TROUBLE
(White Diarrhea)

[illegible] the simple sure way that all [illegible] breeders have [illegible] for [illegible] years. They knew it was [illegible] for them. [illegible]

Get some B-K. Your dealer has B-K in quart and [illegible] bottles. Put it in the chicks' drinking water from the very first day [illegible]. Keep it up for 10 days. Also disinfect the incubator, spray the pens too. This will destroy the germs that spread in the droppings. White diarrhea will have no chance at your brood. B-K absolutely prevents this bowel trouble.

B-K is more powerful than carbolic acid, yet it contains no poison or acid. Much better and [illegible] than [illegible] and safer than [illegible] tablets. [illegible] don't notice it at all.

Don't put off getting B-K today. [illegible] Money back guarantee on every package.

R. G. KIRBY
Staff Contributor and Adviser
Kirby Poultry Farm

Tobacco Dust Remedy

I read in Pennsylvania Farmer that tobacco dust was good for worms in poultry. Does it kill the worm or does it only remove it from the chicken? You recommend two pounds of tobacco dust of one per cent nicotine to 100 pounds of mash. Would it be all right to use the same amount of dust containing one and one-half per cent of nicotine?—R. C. P., Perry County, Pa.

The tobacco dust should contain not less than one per cent nicotine but I think the one and one-half per cent tobacco dust will be all right to use at the rate of two pounds to 100 pounds of mash. I believe most of the worms are killed by the treatment but it is safest to scrape up the droppings under the roosts in the morning and destroy them if the flock has been seriously infested with parasites. Spreading the droppings on fields where chickens do not range, helps in controlling such infestations.—R. G. K.

Cures for Blackhead

I have noticed on the poultry page numerous inquiries about blackhead, a deadly disease among poultry and have not seen that R. G. Kirby replied with a treatment that would cure the disease.

I have found a cure for blackhead. I never saw it printed in the poultry columns and I woul like Mr. Kirby to experime with it on some flock of poult affected with the disease. Mr Kirby may know about the cu but if he doesn't, I will gla send him a sample to try out— H. B. T., Butler County, Pa.

It would be best to send the for blackhead to the poultry de ment of your state experiment tion as they are equipped with oratories for scientific investiga A commercial poultryman can ly afford to risk his own flock such experimental work. In my case, there is no blackhead in flocks and I could not bring in mens for experimental purposes cause of the danger of spreading disease.

Remedies Not Efficient

The statement that there is cure for blackhead is based on failure of so many remedies to satisfactory results. Many rem have been suggested and tried oly without proving efficient. If good remedy is discovered at the periment stations I am sure the will be promptly broadcasted as much needed.

I would write the experiment tion, send them a sample and them what it contains. I believe fair to tell a scientific worker a remedy contains to aid him in termining its value as a cu R. G. K.

Selling Breeding Rabbits

THE rabbit business pays best as a mail order proposition. This means that at least a small amount of advertising must be done to locate customers. The continued success of the enterprise depends upon pleased customers which will bring repeat orders from buyers and also orders from their friends.

Promptness in answering letters is essential. The buyer who needs rabbit stock answers the advertisement because at the moment he is anxious to see some good rabbits in his hutches. If the reply is delayed his enthusiasm has a chance to cool and the lack of promptness may lose a good order.

The seller of rabbit breeding stock soon finds that many of the inquiries will be from boys and girls under age who like good rabbits and wish them both as pets and business propositions. Much care should be used to give these children fully as much or more than their money's worth. It is not only a simple business deal with them. You should insure their success with rabbits as much as possible and not put them out of business, causing a loss of confidence which is detrimental to their success in any line.

Give Them the Best

Give the boys and girls the best kind of rabbits you can sell. They appreciate it and often tell friends and this helps make your business grow. The production of fine quality rabbits is not exactly a child's business but observation proves that many children are learning business methods thru the care and selling of rabbits. In sections where clubs have been formed there is a fine outlet for trios of purebred stock among the beginners. These buyers deserve all the encouragement the experienced breeder can give them. means a great deal to the futu the purebred rabbit business to the beginners enjoy success.

In answering inquiries much should be taken to state the we and ages accurately. When se Flemish Giants, where the weights are much desired, it pa underestimate rather than to o timate the size of the breeding s The buyer who obtains a weighing a half pound more tha expected is sure to be a friend of seller. If that buck is half a p underweight the buyer feels he been cheated even if the rabbit fine type and very vigorous.

Not Hard to Raise

Rabbits are comparatively ea raise and easy to ship. But proposition of raising market some farmers find them less sa tory than expected. This happe cause the people of the comm have not been educated to eat r meat. But all over each state are thousands of small commu where some of the people lik raise a few rabbits for the meat supply. They are in the m for first class breeding stock.

This gives the farmer who is lated a chance to raise rabbits sell them thru a mail order bus No matter how far from rabbit ce people that farmer may live be has a chance to do a very profi business thru the selling of st vigorous breeding stock.

It is the farm boy's chance learn business methods and lives breeding without investing m money. By combining fine qu stock with the use of [illegible] ads, possible to sell breeding rabbits a very satisfactory profit and d without exaggerating the quality the stock or charging too prices.—R. G. K.

White Diarrhea

plendid Success of Mrs. Ethel Rhoades in Preventing White Diarrhea

Mrs Rhoades' letter will no doubt e of utmost interest to poultry aisers who have had serious losses om White Diarrhea. We will let rs. Rhoades tell it in her own ords:

"Gentlemen: I see reports of so any losing their little chicks with ite Diarrhea, so thought I would ll my experience. My first incubat chicks when but a few days old, gan to die by the dozens with hite Diarrhea. I tried different medies and was about discouraged ith the chicken business. Finally, I t to the **Walker Remedy Co., Dept. , Waterloo, Ia.,** for a $1.00 box of ir Walko White Diarrhea Remedy. s just the only thing for this terle disease. We raised 700 thrifty, althy chicks and never lost a single ick after the first dose."—Mrs. hel Rhoades, Shenandoah, Iowa.

Cause of White Diarrhea

White Diarrhea is caused by the acillus Bacterium Pullorum. This rm is transmitted to the baby chick rough the yolk of the newly hatch egg. Readers are warned to bere of White Diarrhea. Don't wait til it kills half your chicks. Take "stitch in time that saves nine." emember, there is scarcely a hatch ithout some infected chicks. Don't these few infect your entire flock. event it. Give Walko in all drinkg water for the first two weeks and u won't lose one chick where you hundreds before. These letters ove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek, d., writes: "I have lost my share of icks from White Diarrhea. Finally ent for two packages of Walko. I sed over 500 chicks and I never t a single chick from White Diarea. Walko not only prevents White arrhea but it gives the chicks rength and vigor; they develop icker and feather earlier."

ever Lost One After First Dose

Mrs. C. M. Bradshaw writes: "I d to lose a great many chicks m White Diarrhea, tried many medies and was about discouraged. a last resort I sent to the **Walker medy Co., Dept. 518, Waterloo,** , for their Walko White Diarea Remedy. I used two 50c packs, raised 300 White Wyandottes d never lost one or had one sick er giving the medicine and my ickens are larger and healthier an ever before. I have found this mpany thoroughly reliable and alys get the remedy by return mail." Mrs. C. M. Bradshaw, Beaconsfield, a.

Hatchery Chicks

OUR experience with chicks from large commercial hatcheries covers a number of years. The first ones procured numbered only several dozen which were given to hens to mother. Later the number of chicks ran into the hundreds. Without a single exception I am glad to say that the hatcheries have done their utmost to insure the prompt and safe arrival of the baby chicks.

The baby chicks themselves from these commercial hatcheries may not all be as husky as those hatched out by hens but I must admit that I have often had chicks come out of nests, where eggs were broken and where a hen failed thru sickness or other cause to keep her eggs covered, that did not come up to the average hatchery chick. In the long run there is hardly any difference in the vigor of the chicks.

Prefers Hatchery Chicks

When I compare the quality—laying ability and breed—of our own hatched chicks of years ago with those of today that come from large hatcheries, I prefer the hatchery chick. There are several reasons for this preference. One is that new blood is gotten yearly into the flock and another is that the hatchery breeders have birds of a higher laying record which tendency is apt to descend to offspring.

I am personally acquainted with a number of men who run large hatcheries and I have seen with my own eyes how the best layers were selected and mated with the best roosters that money could buy and all this for the betterment of the baby chicks.

Feeding Is Most Important

Feeding, whether you give the chicks to hens or raise them in brooders, is the most important thing in chick raising. We feed a well-known, good, baby chick feed as directed by makers and give milk, sour, thick, not sweet, and encourage the chicks to drink large quantities daily until they are fairly large and even then if we can spare or buy it.

We change gradually from one feed to another because baby hatchery chicks, brooder raised, will sometimes go on hunger strikes if their rations are changed while they are small.—R. I. W.

The World's Wealth

THE comparative wealth of the leading countries of the world is shown by the following figures compiled by the National City Bank of New York. It is noteworthy that the national wealth of the United States is nearly four times that of the second country on the list, the United Kingdom of Great Britain. The fifteen countries which lead are:

United States	$320,803,000,000
United Kingdom...	83,840,000,000
France	67,710,000,000
Germany	35,700,000,000
Spain	29,319,000,000
Italy	25,986,000,000
Canada	22,095,000,000
India	21,960,000,000
China	19,087,000,000
Poland	17,000,000,000
Argentina	13,178,000,000
Brazil	13,020,000,000
Australia	9,689,000,000
Holland	8,260,000,000
Cuba	8,000,000,000

No figures are available for Russia at present she stood fourth in wealth in 1912

The term wealth as used here includes real property and improvements, clothing, furniture and kindred property, manufactured products, railroads and their equipment, manufacturing machinery, tools and implements, livestock, agricultural products, street railways, and telegraph and telephone systems.

WOLVERINE Comfort Shoe

June 6, 1924
Michigan Shoe Makers
Rockford, Mich.

Dear Sirs: Two years ago I bought a pair of your Comfort Work Shoes, size 7. I have worn these shoes for every day steadily ever since. The only repairs were the nailing of one of the soles.

They are almost worn out now and I wish to get another pair of the same style and size. Very truly,
(Signed) FRED BASTING,
Bloomington, Illinois

Two Years Wear PLUS+
a new comfort for the tender foot
It's the way we tan our leather

A work shoe can be made to wear like iron and still be as comfortable as a carpet slipper. It's all in the leather. You'll realize this the first time you slip into a pair of Wolverine Comfort Shoes. Thousands of men write us letters like the one above. They say Wolverines actually outwear three ordinary pairs. And you never knew such comfort in a work shoe.

The secret of this combination is in our leather. We select the best hides for this shoe. And we tan them ourselves.

We have a special process that makes the heaviest leather pliable. Note how easily the thick sole leather bends. It's soft and easy on your feet. But it wears like iron. You'll say there never was a work shoe like it for summer wear.

We specialize on work shoes only. And from the hides to the finished shoes we do everything ourselves. That's why you'll find Wolverines different from any other work shoes.

Try a pair of Wolverine Comfort Shoes this season. Feel the mellow pliable leather. Soft as velvet but tough as rawhide. You'll see why it wears so well. And still feels as comfortable as a carpet slipper from the first day you put it on.

There's a Wolverine shoe for every job. For lumber camp, mine, oil field, factory and farm—and for every season. Send today for our catalog that will show you your shoe—the one exactly suited to your needs.

If your dealer hasn't Wolverines, please write us. We will send our catalog at once, and the name of your nearest Wolverine dealer.

Which Hay for Cows?

Which do you consider makes the better rough feed for cows, soy bean hay or cow pea hay?
—B. W., Hartford County, Md.

The analyses of soy bean hay and cow pea hay are quite similar, altho the latter is slightly higher in protein, and the soy bean hay is slightly higher in carbohydrates. The following table gives their analysis and also that of alfalfa hay cut while in bloom:

Feed	% dig. protein	% dig. carbohydrates	% dig. fat	% total dig. nutrients
Cow pea hay in bloom to early pod	12.6	34.6	1.3	50.1
Soy bean hay	11.7	39.2	1.2	53.6
Alfalfa hay cut during bloom	10.5	38.5	.7	50.6

It is to be noted that both cow pea hay and soy bean hay are slightly higher in protein content than alfalfa hay cut while in bloom. The general composition of the three different roughages is similar and each is an excellent feed for dairy cows.

Cow pea hay does not have quite as coarse stems as soy bean hay. On account of this fact, together with the additional fact that it is slightly higher in protein content than soy bean hay, it would seem to have a slight advantage over the soy beans. Especially would this be the case in the vicinity of Bel Air, Md., or in any of the southern states, where cow peas do well. It should be mentioned, however, that a variety such as New Era would be preferable on account of its stronger stems which enable it to stand up better and thus facilitate harvesting the crop.—A. A. B.

Six New Areas

SINCE the first of this year six new counties in four states have received official recognition as tuberculosis-free areas, following the completion of testing all cattle within their borders. The new counties are in California, Iowa, Minnesota and North Carolina. This progress swells the total of "modified accredited counties," as they are called, to fifty-nine and is further evidence that tuberculosis eradication is a practical undertaking and a reality.

More than 400 other counties in the United States, as shown by records of the Bureau of Animal Industry, United States Department of Agriculture, are engaged in eradicating the disease from their cattle. At the beginning of March there were unfilled applications for testing representing more than 2,500,000 cattle.

Resolutions Adopted

AT A meeting of the representatives of the five dairy breeds held at Washington on February 20, 1925, the following resolution was unanimously adopted:

"Resolved, that the representatives of the dairy breed associations here assembled recognize the value of the 305-day test, with calving requirements, and recommend its general adoption, in the belief that the 365-day test will be ultimately eliminated."

The day after this resolution was passed by the representatives of all of the dairy breeds the directors of the American Jersey Cattle Club met and considerd this question. The result was the unanimous adoption of the following resolution:

"Resolved, that on and after January 1, 1926, no test will be accepted by the American Jersey Cattle Club based on more than 305 da work, but tests for 365 days be prior to that date will be accepte

Dual Purpose Sale

BREEDERS of Milking Shortho cattle in Bradford County, P are making plans for their seven annual sale which is to be held Troy on Saturday, June 6. The cess of the sales held the past years has made this event one of portance to those interested in d purpose cattle. Bradford Cou Milking Shorthorn breeders h sold animals to breeders in sixt states and some have gone to C ada.—W.

Maximum Production

ACCORDING to popular opini dairy cow is mature and rea her maximum production at or after five years of age. Dairy b associations in formulating the quirements for the Advanced Re try early decided that as far as th work was concerned maximum m and buttermilk requirements sho be made by cows five years of In a study of this question, R. Clark, county agent of Hunting County, found that the average of maximum milk production eight years for Holsteins, Jers and Guernseys, and nine years Ayrshires. A similar study was of the grade Guernsey herd at Pennsylvania State College by A. Beam, of the Department of D Husbandry, who found that g Guernseys reached their maxim milk production at an average of eight years with but a slight y ly increase after the sixth year age.—B.

Standard Set

A MINIMUM requirement of 7 pounds of milk or 250 pound butterfat is the standard which been set for the production of d cows in Butler County, accordi E. B. Fitts, in charge of dairy tension at the Pennsylvania S College.

This standard of production one of the topics of the dairy provement program which was cussed at the Butler County F Bureau Executive Committee m ing. At the same meeting it was cided to encourage cow testing bull association work, and to mote the organization of calf cl

Sentiment was also in favor of creasing the acreage of alfalfa clover and the adoption of coun wide area testing for tubercul One township in Butler County boasts of having 100 per cent p bred bulls.—A. L. B.

Poland China Prizes

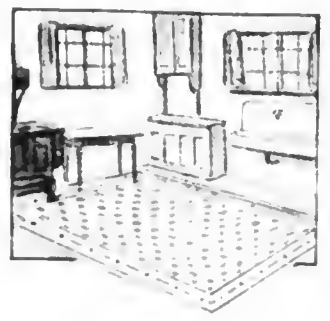
BREEDERS of Poland China sw in Pennsylvania have an op tunity to win one of three prizes fered by the American Poland C Record Association. The first priz $50 will be awarded to the state ing the largest number of ton lit sired by registered Poland C boars. The state having the se largest number will receive $30. $20 will be given to the state ta ing third.—A. L. B.

For Cleaner floors with Less work

Armstrong's **Linoleum Rugs**

Wear longer—genuine cork linoleum clear through to the burlap back

The cost is so little



Your Kitchen

About the easiest way to protect your kitchen floor from the stampede of heedless barnyard stained boots is to cover it with an Armstrong's Linoleum Rug. No more beating, shaking, or old-fashioned, back-breaking scrubbing brush methods.

"2 minutes mopping and—CLEAN!"

Your Living-Room

There's precious little beauty and no satisfaction left in a floor covering that still looks soil-stained and grimy right after you clean it. The beauty of an Armstrong's Linoleum Rug lies in the fact that it always looks neat and clean.

"2 minutes mopping and—CLEAN!"

"And even now, old floor, you're not really clean. That's what's *so* discouraging

—you ought to look far brighter after all the scrubbing I've given you. I'm THROUGH *—I simply* MUST *have a floor covering that's easier-to-clean."*

Armstrong's Linoleum Rugs *are* easier-to-clean. "2 minutes mopping and—CLEAN!" And they *stay* clean longer because an Armstrong Rug is always solid, genuine cork linoleum clear through to the burlap back.

You just *can't* dislodge ground-in soil from a floor surface that splinters and chips off into pits and jagged hollows, without going back—hands and knees—to the old-fashioned, backbreaking scrubbing brush. So let's forget that once and for all, and get an ARMSTRONG RUG.

Which Hay for Cows?

Which do you consider makes the better rough feed for cows, soy bean hay or cow pea hay?—B. W., Hartford County, Md.

The analyses of soy bean hay and cow pea hay are quite similar, altho the latter is slightly higher in protein, and the soy bean hay is slightly higher in carbohydrates. The following table gives their analysis and also that of alfalfa hay cut while in bloom:

Feed	% dig. protein	% dig. carbohydrates	% dig. fat	% total dig. nutrients
Cow pea hay in bloom to early pod	12.6	34.6	1.3	50.1
Soy bean hay	11.7	39.2	1.2	53.6
Alfalfa hay cut during bloom	10.5	38.5	.7	50.6

It is to be noted that both cow pea hay and soy bean hay are slightly higher in protein content than alfalfa hay cut while in bloom. The general composition of the three different roughages is similar and each is an excellent feed for dairy cows.

Cow pea hay does not have quite as coarse stems as soy bean hay. On account of this fact, together with the additional fact that it is slightly higher in protein content than soy bean hay, it would seem to have a slight advantage over the soy beans. Especially would this be the case in the vicinity of Bel Air, Md., or in any of the southern states, where cow peas do well. It should be mentioned, however, that a variety such as New Era would be preferable on account of its stronger stems which enable it to stand up better and thus facilitate harvesting the crop.—A. A. B.

Six New Areas

SINCE the first of this year six new counties in four states have received official recognition as tuberculosis-free areas, following the completion of testing all cattle within their borders. The new counties are in California, Iowa, Minnesota and North Carolina. This progress swells the total of "modified accredited counties," as they are called, to fifty-nine and is further evidence that tuberculosis eradication is a practical undertaking and a reality.

More than 400 other counties in the United States, as shown by records of the Bureau of Animal Industry, United States Department of Agriculture, are engaged in eradicating the disease from their cattle. At the beginning of March there were unfilled applications for testing representing more than 2,500,000 cattle.

Resolutions Adopted

AT A meeting of the representatives of the five dairy breeds held at Washington on February 20, 1925, the following resolution was unanimously adopted:

"Resolved, that the representatives of the dairy breed associations here assembled recognize the value of the 305-day test, with calving requirements, and recommend its general adoption, in the belief that the 365-day test will be ultimately eliminated."

The day after this resolution was passed by the representatives of all of the dairy breeds the directors of the American Jersey Cattle Club met and considerd this question. The result was the unanimous adoption of the following resolution:

"Resolved, that on and after January 1, 1926, no test will be accepted by the American Jersey Cattle Club based on more than 305 d work, but tests for 365 days be prior to that date will be accepted

Dual Purpose Sale

BREEDERS of Milking Shortho cattle in Bradford County, are making plans for their seve annual sale which is to be held Troy on Saturday, June 6. The cess of the sales held the past years has made this event one of portance to those interested in d purpose cattle. Bradford Cou Milking Shorthorn breeders h sold animals to breeders in sixt states and some have gone to C ada.—W.

Maximum Production

ACCORDING to popular opinio dairy cow is mature and reach her maximum production at or after five years of age. Dairy b associations in formulating the quirements for the Advanced R try early decided that as far as th work was concerned maximum m and buttermilk requirements sh be made by cows five years of In a study of this question, R. Clark, county agent of Hunting County, found that the average of maximum milk production eight years for Holsteins, Je and Guernseys, and nine years Ayrshires. A similar study was m of the grade Guernsey herd at Pennsylvania State College by A. Beam, of the Department of D Husbandry, who found that gr Guernseys reached their maxim milk production at an average of eight years with but a slight y ly increase after the sixth year age.—B.

Standard Set

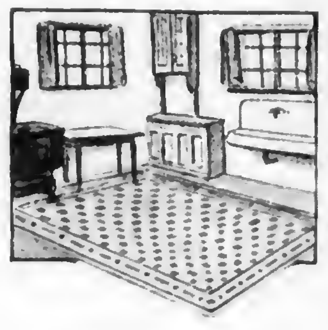
A MINIMUM requirement of 70 pounds of milk or 250 pounds butterfat is the standard which been set for the production of d cows in Butler County, accordin E. B. Fitts, in charge of dairy tension at the Pennsylvania St College.

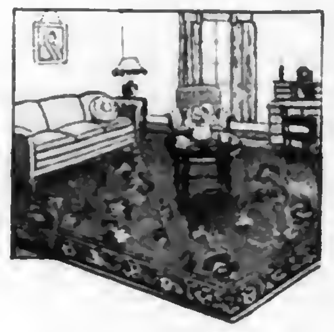
This standard of production one of the topics of the dairy provement program which was cussed at the Butler County Fa Bureau Executive Committee m ing. At the same meeting it was cided to encourage cow testing bull association work, and to p mote the organization of calf cl

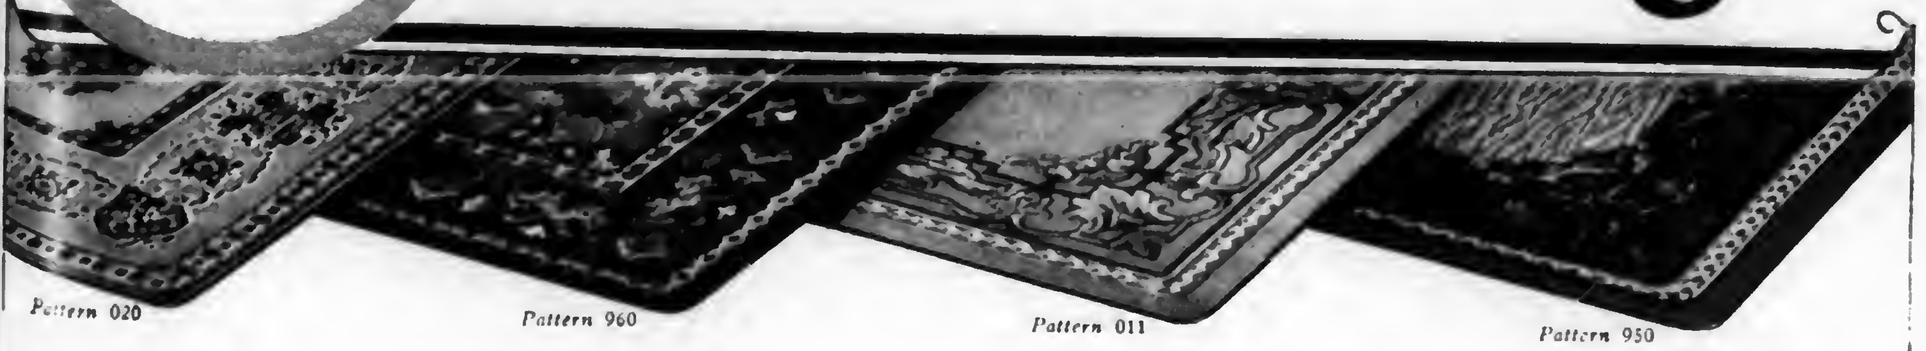
Sentiment was also in favor of creasing the acreage of alfalfa clover and the adoption of count wide area testing for tubercul One township in Butler County boasts of having 100 per cent p bred bulls.—A. L. B.

Poland China Prizes

BREEDERS of Poland China sw in Pennsylvania have an opp tunity to win one of three prizes fered by the American Poland Ch Record Association. The first prize $50 will be awarded to the state h ing the largest number of ton litt sired by registered Poland Ch boars. The state having the seco largest number will receive $30, a $20 will be given to the state ra ing third.—A. L. B.







For Cleaner floors with Less work

Armstrong's **Linoleum Rugs**

Wear longer—genuine cork linoleum clear through to the burlap back

The cost is so little

Your Kitchen

About the easiest way to protect your kitchen floor from the stampede of heedless barnyard stained boots is to cover it with an Armstrong's Linoleum Rug. No more beating, shaking, or old-fashioned, back-breaking scrubbing brush methods.

"2 minutes mopping and—CLEAN!"

Your Living-Room

There's precious little beauty and no satisfaction left in a floor covering that still looks soil-stained and grimy right after you clean it. The beauty of an Armstrong's Linoleum Rug lies in the fact that it always looks neat and clean.

"2 minutes mopping and—CLEAN!"

"And even now, old floor, you're not really clean. That's what's *so* discouraging

—you ought to look far brighter after all the scrubbing I've given you. I'm THROUGH*—I simply* MUST *have a floor covering that's easier-to-clean."*

Armstrong's Linoleum Rugs *are* easier-to-clean. "2 minutes mopping and—CLEAN!" And they *stay* clean longer because an Armstrong Rug is always solid, genuine cork linoleum clear through to the burlap back.

You just *can't* dislodge ground-in soil from a floor surface that splinters and chips off into pits and jagged hollows, without going back—hands and knees—to the old-fashioned, back-breaking scrubbing brush. So let's forget that once and for all, and get an ARMSTRONG RUG.

ARMSTRONG CORK COMPANY

This flame heats the kettle ~ not the kitchen

¶ This cut-away view shows how the blue flame of the Florence goes straight to the cooking. The heat is *focused* just where you want it for quick cooking.

See how the focused flame of the Florence sends the heat straight where you want it!

COOKING heat thrown out into the kitchen means a three-times-a-day drain on your time and temper. Cooking heat that goes straight to the bottom of the kettle will give you the best cooking results in the least amount of time.

That's the working principle of the Florence—the oil range with *focused heat*. Specially designed burners send the heat directly into the cooking, where you want it.

Naturally, this more efficient stove helps you cook better meals. The certainty and the simplicity of the Florence cut out all the guesswork. You can have the right heat—where you want it—at the turn of a lever. To start the Florence you have only to turn a lever, touch a match to the asbestos kindler, and the range is ready to cook your dinner.

Florence kitchens are cool in summer

No use to hope for a cool kitchen if your cooking stove throws much of the heat out into the room. The Florence uses the heat for cooking and leaves the kitchen cool—a pleasant place to work on a hot summer day.

Your first glimpse of the Florence will tell a story of service and beauty. The sturdy frame is built for years of hard use; the shining enamel means just as many years of good looks. Here's an oil range that you, as a good housekeeper, would be proud to have in your kitchen.

Go see for yourself

Ask one of your neighbors who use the Florence to show you how convenient it is. How it lights at a turn of the lever and a touch of a match to the clean asbestos kindler. No wicks to trim. Let her tell you how reasonable the Florence is in its demands for kerosene—one of the cheapest fuels known, and one that is always easy to obtain.

Or—go to the nearest department, furniture, or hardware store and look the Florence over.

The Florence Leveler

is one of the Florence's many refinements—a device on each leg, which overcomes any unevenness in the floor. Just turn the screw to the exact height indicated by the spirit level on the feed pipe.

INTENTIONAL 2ND EXPOSURE

Look for the Hood White Arrow

WHY? Because it marks the new Hood Flat Tread Balloons. The flat tread is important to you because it shows less destructive side wall flexing — insures longer balloon tire life.

Hood developed this flat tread principle in balloons. A Hood Balloon at proper inflation puts more rubber on the ground — gives better traction — more speed with less motor overload than the average balloon, and the Hood self-cleaning, non-skid tread assures maximum car safety.

Let the Hood dealer tell you how Hood is maintaining quality for your protection.

Let the tire prove these statements to you.

Get the facts — they're behind Hood White Arrow.

Why Cream Tests May Vary

Some Reasons That Influence the Variation

MISUNDERSTANDING as to why cream tests vary from month to month often causes much discussion, and sometimes leads to dissatisfaction among those who sell cream on the basis of the butterfat content, according to L. W. Morley, dairy extension specialist of the Pennsylvania State College.

There are several important reasons why cream tests may vary.

First, the richness of the cream varies with the richness of the milk. Any factor which materially influences the amount of milk may produce a lower testing milk, and as a result the cream test goes down. If for any reason a herd which averages four per cent milk drops to three and six tenths per cent, a variation of from five to eight per cent may result in the butterfat test of the cream.

Another important factor in explaining the variation of cream tests is the speed of the separator. High speed yields a rich cream, since the faster the separator is turned the larger the proportion of skimmilk to the amount of cream produced. Lowering the speed from sixty revolutions per minute to forty or even fifty may result in a lower butterfat content in the cream produced.

The use of a large amount of water or skimmilk to flush out the bowl tends to dilute the cream. This materially lowers the butterfat test. Temperature of the milk may also influence the test of the cream. The effect varies with different machines. —A. L. B.

Cattle Testing Rate

THE tuberculin testing of cattle, to eradicate bovine tuberculosis from the United States, is now going forward at a rate exceeding six million cattle annually, according to a recent statement of the Bureau of Animal Industry, United States Department of Agriculture.

A Noticeable Increase

Figures for the last six months of 1924 show that under the cooperative plan there were tested 283,935 herds containing 3,157,126 cattle. This rate of testing was a noticeable increase over that for the preceding six months. Estimates based on the gradually increasing volume of testing, indicate that from six and one-half to seven million cattle will be tested during the fiscal year ending June 30, 1925. This is in comparison with about five and one-third million during the fiscal year 1924.

Area Plan at Work

DETERMINED to rid Franklin County of tubercular cattle, committees are working at the present time in all but three townships in the county to secure the signatures of dairymen interested in having their cattle tested for tuberculosis. County Agent J. H. Knode reports that at least ninety per cent of the cattle owners in Southampton, Lurgan, Fannette, Peters, St. Thomas, and Montgomery Townships are now signed up. Green Township, with a seventy per cent enrollment now, will soon be ready for the test.

It is estimated that within two weeks ninety per cent of the cattle owners in Franklin County will be signed up to have their cattle tested. This will mean the testing of about twenty-six of the twenty-nine thousand cattle in the county.—A. L. B.

ASTRONOMERS say that with a powerful telescope they can count about ten thousand stars for each one that is visible to the naked eye.

✚ ✚ ✚

Swat the fly,—also the rat. It has been figured that it would be possible for a single pair of rats to produce a posterity of over 350,000,000 in three years.

✚ ✚ ✚

A professor in Zurich Technological University in Switzerland has invented a machine which he calls a hochdruckkondensationsdampflokomotive. That has paradichlorobenzene, the peach borer remedy, beaten by a mile. The new machine is a high pressure condensing steam locomotive.

✚ ✚ ✚

According to "Nature," the daisy is not a native American plant. Its original home was Europe and Asia and it was brought to this country by early settlers in grass seed. In Colonial days it was a favorite garden flower.

✚ ✚ ✚

Russia exported about fifty million dozens of eggs last year, most of them going to Great Britain. The Russians use dry shavings for packing eggs for export.

✚ ✚ ✚

One-third of all the Red Top seed grown in the world is said to be marketed by the Egyptian Seed Growers Association, composed of 826 producers living in eight counties of Illinois.

✚ ✚ ✚

Up to April 1 a total of 230 farmers had enrolled for the 1925 Keystone Ton Litter Club. York County led, with forty farmers entered. Jefferson had twenty, Cumberland and Northumberland fifteen each, Adams and Dauphin fourteen each, Lancaster twelve and Union ten. Last year the enrollment was doubled after April first. The goal of each contestant is to raise a litter of pigs that will weigh over 2000 pounds when 180 days old. County agents will enroll contestants until May fifteenth.

✚ ✚ ✚

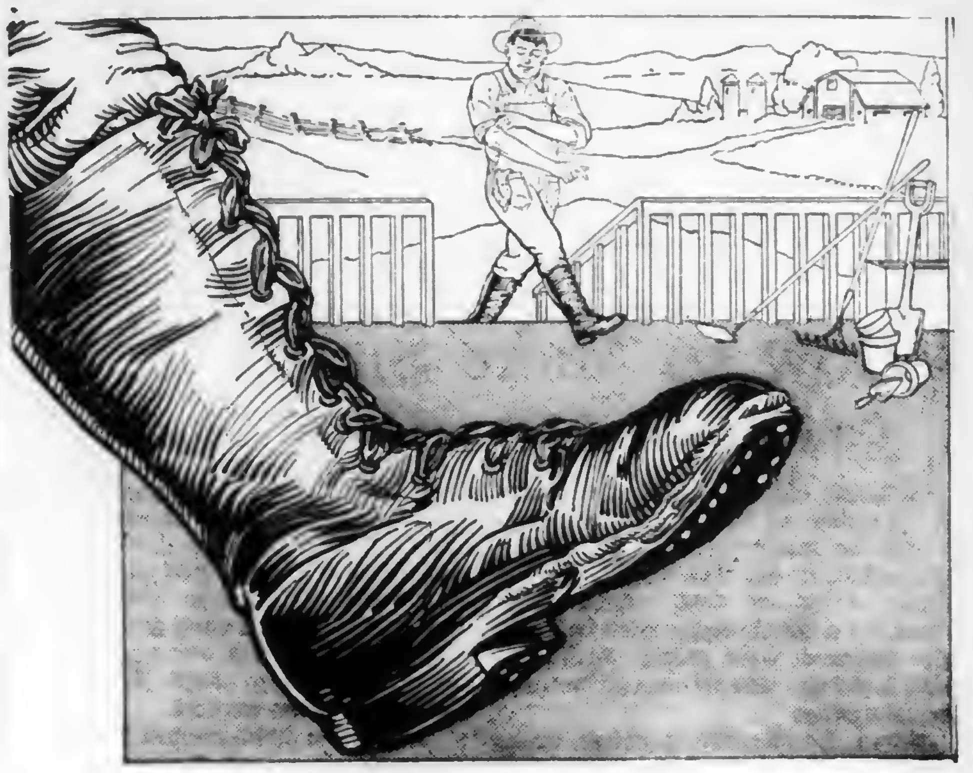
It is the European barberry, and not the harmless Japanese barberry, that infects wheat with the black stem rust, causing great damage. The dangerous European type has tooth-edged leaves; the Japanese type has smooth edged leaves. The fruit is like a loose grape cluster in the European, but single or paired in the Japanese.

✚ ✚ ✚

The herd bulls grind the feed and milk the cows on a Jersey farm in North Dakota. Two of them are kept in box stalls. Each morning one is led onto a tread mill where he gets his daily exercise and furnishes power to run the milking machine. The other has his turn at night. They also operate a small feed grinder which is belted to the tread mill.

✚ ✚ ✚

Glista Ernestine, the famous Holstein cow that has been in the herd at Cornell University for sixteen years, has produced during her life over 101 tons of milk. She has given an amount of milk equivalent to her own weight for every month of her life since she reached producing age. At sixteen years of age she made a record of 14,665 pounds of milk containing 540 pounds of fat.—W.



Talked about everywhere
Unlike anything you've ever used
The *liquid* floor covering *applied with a brush*—
Resists hardest wear; Waterproof
for any floor: WOOD OR CEMENT INSIDE OR OUTSIDE

KOVERFLOR is entirely different from anything you have ever used.

It beautifies and protects all floors, creating a fresh, wholesome surface—tile-like in appearance—which is easily cleaned with a mop. It resists the most rugged wear and tear and is impervious to water, weather, oil and grease.

It prevents the elements of decay from attacking the flooring material. If your cement floors dust, Koverflor will stop it. It will also enhance their beauty and add to their value.

Koverflor is supplied in solid colors for any floor—wood or cement—inside or outside. Ideal for the porch. Also for cellars, garages, factories, stores, industrial and commercial buildings, steamships, yachts, boats, etc. Particularly effective for old floors.

Economical. Easily applied with a brush—just like paint. Hardware and paint dealers sell it. If unable to obtain it conveniently, we will supply it direct.

How to Make Simple Hats

Combinations of Silk and Straw Have Style

THE felt hat described in a recent number of Pennsylvania Farmer can be made to look spring-like by combining the felt with straw. A double brim of felt, edged with straw, or a single brim with an edge wire covered with straw braid, is good looking. Straw should be used for trimming.

Clever hand-made touches make hats expensive in the shops, but these touches can be given by the skillful home milliner at very slight expense. An all-straw braid hat is perhaps the easiest for a new milliner to make, but it does not have the expensive and stylish look that the combinations have.

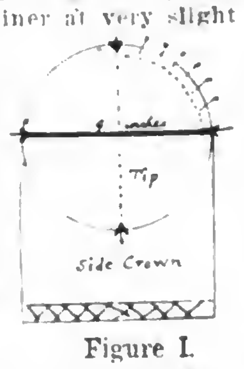

Figure I.

Choose a good buckram frame if you are going to make a hat with a straw brim and a silk top. Silk purchased at a millinery supply house will be cut on the bias. One-third of a yard will make a "tip" (the top of the crown) and a side crown. Measure the frame around the fullest part of the crown, taking a snug measure. Cut the bias side crown this length and twelve inches wide, allowing three-eighths of an inch for a seam.

Notch the Edges

Cut the tip, a circle with a nine-inch diameter, using a tea plate to get it perfect. Fold the tip in half and notch the two edges. Quarter, and notch again (see Figure I). There should be four notches.

To piece the bias side crown, place the two straight edges together, allowing the upper right edge to extend beyond the lower so that it forms a triangle three-eighths of an inch high. Begin to sew at the tip of the triangle (see Figure II), using a combination stitch of three running stitches and one back stitch. Keep the seam parallel to the outer edge. Press the seam open with the thumb and forefinger.

Fold the side crown at the center point of the bias seam. Notch at the folds on one edge, quarter and notch again, having four notches in all. Turn over the unnotched edge three-eighths of an inch, pressing it gently between the thumb and forefinger.

Begin from the right and cat stitch the hem. Place the tip and the side crown together, matching the notches. Hold the tip toward you and pin at the notches, placing the pins at right angles to the edge. Pin several times between the notches. Sew with a combination stitch, making a three-eighth inch seam.

Covering the Brim

To cover the brim use a good straw with a thread in the edge to pull it up to the shape of the hat. If the brim turns down, cover the lower brim first, if it turns up, the upper brim. Beginning at the back, place the straw flush with the edge, allowing the end to extend toward the left two inches. Pin the straw all the way around once, placing the pins up and down thru the straw and the brim's edge.

When you come back to the starting point, pin over the first layer and keep flush with it until over the center back. Then gradually start downward until the outer edge of the second row is just over the inner edge of the first row. To sew, take a long stitch thru the straw and buckram, and then two small stitches in the two straw edges. Repeat until both brims are covered.

The under brim should have straw extending up into the crown about an inch, the upper brim onto the crown one inch. Mercerized thread the color of the braid makes the sewing easier. Slip stitch the straw edges together.

Putting on the Silk Top

Place the silk top over the crown with the center point of the piecing in the side crown in line with the center back of the brim. Stretch the tip smooth, pinning front, back and sides. Drape the side crown and then take a few small stitches to hold the crown in place. Conceal these stitches if possible.

The same methods are followed in the making of children's hats, tho the frames are more youthful. Felt hats are very nice for young girls and even small children. Their trimmings should be very simple.—Edith R. Dilts.

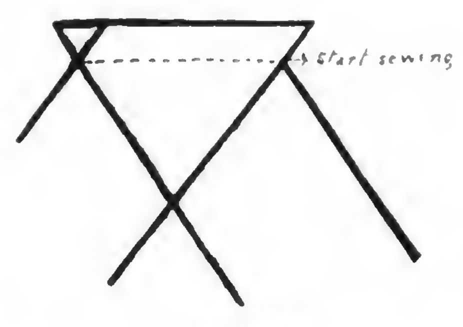

Figure II.

If you would like the address of a millinery supply house where you can order hat frames, millinery needles, wire, and other supplies for making hats, write to the household editor, enclosing a self-addressed stamped envelope.

Where Baby Was

I SAW a friend of mine come into an all-day meeting minus her four-month-old baby. I tried to think who could be keeping the baby for her. At the first opportunity I got around to her side of the hall and said: "Where is that baby?"

"Come along and I will show you," she replied, "it is about time to feed her anyway."

I was still more mystified, but she led me out to her closed car, and opened the door. There in a clothes basket in the rear of the car, was baby, playing with her fingers and as contented as you please.

The curtains on the car had been pulled down so there was not too much light, and a window opened from the top in front so the wind would not blow on her ladyship.

The mother stepped into the car and nursed her baby, put the baby back in the basket and returned to the meeting for dinner with the crowd in the basement.

That basement was surely not a fit place to take a baby, and needless to say a day in the crowded hall would have tired her dreadfully, but as it was both mother and baby enjoyed the day, and neither was any worse.

Of course, the baby was warmly dressed, tho she didn't have too much clothing. Too much clothing tires a baby as well as an older person.

The mother told me that quite often when she wanted to get the baby out in the fresh air at home and did not have time to take her out, she used the clothes basket method.—May H. Mumaw.

Enjoyed Electric Fuss

THE comment by one of your readers recently in regard to the "electric fuss" interested me. Too many women are of the same opinion. I have no electricity and perhaps never shall have, but I enjoyed the number that told about the electric devices, and I surely should enjoy using many of them.

It seems to me that good light and heat are the fundamentals of home comfort. No light is as good as electricity.

One very good reason for the lack of labor savers in many homes is that the women themselves do not want them. Many want them who cannot get them, but one thing is sure,—they must want them before they get them.

Can If They Would

We have a gas engine that fills the bill in some respects. Washing had come to be my hardest job. After doing a small wash, I was completely tired out. After we got the engine at it, wash day was my rest day. I really am less tired on that day than when doing most other work.

A number of people could wash this way if they wanted to. A neighbor saws wood with a small engine and could wash as well. No high priced washer is needed. Any wheel-driven washer will do, altho, of course the high priced ones are nicer.

Churning is the same. While we are busy at something else, the churning is done. We used the same barrel churn with an old wheel which we happened to have, for a pulley. One could have been made from wood if we had not had the other.

When there are so many calls upon time and strength on the farm, every convenience and labor saver is desirable.—Mrs. E. M. C.

Her Kitchen Stool

SHE is a tiny little bit of a woman, and finds it very inconvenient many times when she wishes to reach the top shelves of the cupboards.

I was sitting in her kitchen one day, and by actual count she carried a chair from the dining room five different times to get up onto to get something from the top shelf of the cupboard, in an hour.

Saves Miles of Walking

Finally I said: "Why don't you have one of those kitchen stools that has a step ladder up the side? It would save you miles in the course of a year, besides the convenience of the thing."

"Why," she said, "I did not even know there was such a thing made."

The next time I went to see the friend, she had her kitchen stool with the steps on the side, and she declared it was her most useful article of equipment.—M. H. M.

May Day Is Child Health Day

AT THE request of the American Child Health Association, May 1 is to be kept as a national day to spread information on child health and community health programs.

A message from Secretary Hoover asks that we use the day as a reminder of what we owe our children, as expressed in the "child's bill of rights":

"The ideal to which we should drive is that there should be no child in America that has not been born under proper conditions, that does not live in hygienic surroundings, that ever suffers from undernutrition, that does not have prompt and efficient medical attention and inspection, that does not receive primary instruction in the elements of hygiene and good health."

The three youngsters whose picture appears on Our Page are plainly getting their "rights." The simple outdoor supper of cereal and milk shows that these children are being given a square deal so far as fresh air and food are concerned. If any other proof was needed that they have had a good start and are headed in the right direction, one look at the sturdy straightness of the little backs ought to be enough to convince anyone.—I. S. H.

Getting their rights, plenty of fresh air and wholesome food.

A Canning Time-Table

Blanching and Processing Fruits and Vegetables

THE blanching and processing periods for some of the more common fruits and vegetables are given below:

Product	Blanch	Hot water bath	Pressure cooker	
			5 lbs.	10-15 lbs.
Apples	1½ min.	20 min.	10 min.	6 min.
Berries	Omit	16 min.	10 min.	5 min.
Cherries	Omit	16 min.		5 min.
Peaches	1-2 min.	16 min.		5 min.
Pears	1½ min.	20 min.		6 min.
Plums	Omit	16 min.	—	5 min.
Asparagus	5 min.	2 hours		40 min.
Carrots	5 min.	1½ hours		40 min.
Corn	5 min.	3 hours		60 min.
Greens (steam)	15 min.	2 hours		40 min.

Strawberries

Boil the berries slowly for three to five minutes in a sirup made with three cups of sugar to two cups of water. Let stand over night. The next morning reheat to boiling, fill the jars and process eight minutes in the hot water bath.

Pumpkin for Pie Filling

Cook the pumpkin first in a very little water or in steam. Force it thru a sieve. Pack the pulp into hot sterilized jars and process two hours in the hot water bath or forty minutes in the pressure cooker. If desired, the sugar and spices may be added before canning.

Sirup for Canning Fruits

In making the sirup, the sugar should be stirred into the boiling water in the way that breakfast food is stirred in, and it should be boiled until all the sugar is dissolved. Different sirups are used according to the fruit.

Thin sirup is made by using one part of sugar and three parts of water. Medium sirup calls for one part of sugar and two parts of water. For thick sirup use one part of sugar to one part of water.

For vegetables, salt is added first,—one teaspoon to a quart, and the jar is then filled with boiling water. —Grace E. Fitts.

Wild Vines for Beauty

AMONG the truly beautiful native vines there are five very often offered for sale which dwellers of the eastern United States may have for the careful transplanting. The five are the ground-nut, the mountain fringe, the wild clematis, the true bittersweet and the woodbine.

The ground-nut might well be called the wild wistaria, for its leaf, tho smaller, is very like the leaf of the Chinese wistaria. The blossoms, which are rather small, and in a close cluster, are not at all showy, being a rather dull brownish purple, but one forgets their lack of brilliant color when inhaling the delicious odor.

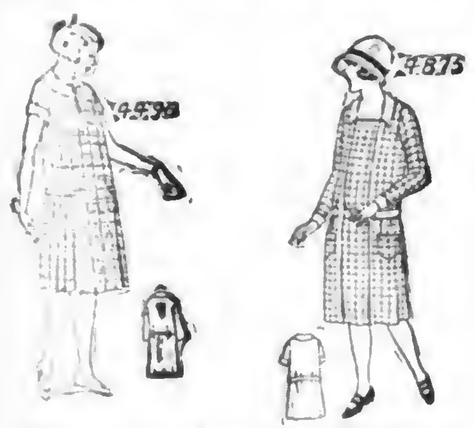
This vine selects for its natural habitat a tangle of bushes along a neglected fence. Take a hint and plant it along the garden fence or

(Continued on page 30)

Now It's the Children's Turn

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

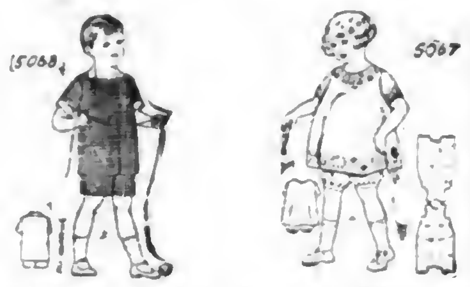
1196.—A Dress with New Features.—Plaid gingham with linen in a contrasting color would be attractive for this style. Printed cotton, crepe or ratine are also pleasing. The waist portions are cut with skirt sections, that are joined to plaited side portions. Four sizes: 8, 10, 12 and 14 years. A 12-year size requires 3½ yards of 36-inch material. To trim as illustrated with contrasting material requires one-half yard of 36 inches wide. Pattern, 10 cents.



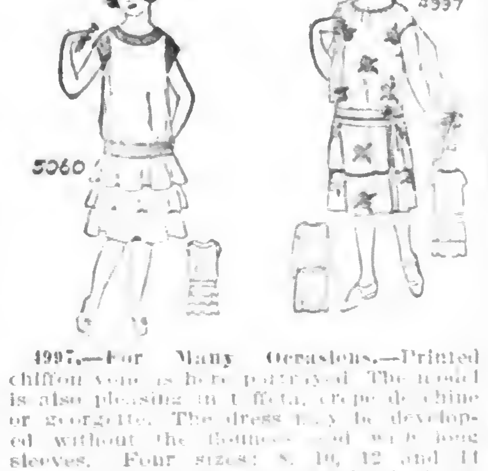
4875.—A Good Model.—Plaid gingham is here combined with white linene. This [illegible] also be suitable for alpaca, [illegible] linen. Four sizes: 8, 10, 12 and 14 [illegible]. A 12-year size requires 3⅞ yards of 32-inch material. For collar and cuffs of contrasting material one-half yard [illegible] inches wide is required. Pattern, 10 cents.

5068.—For the Small Boy.—Checked gingham, poplin, pique, linen and flannel may be used for this model. The smock closes at the right side of the front under [illegible] or trimming band as illustrated. Three sizes: 2, 4 and 6 years. A [illegible] size requires 1⅞ yard of 36-inch material with one-eighth yard of [illegible] contrasting material for collar and facings. Pattern, 10 cents.

5067.—A Unique Rompers Style.—This [illegible] has the bloomers and smock cut [illegible] piece, as the accompanying diagram shows. The sleeves may be omitted. One would develop this pretty model in pongee, rep or chambray. Embroidery, braid or stitchery will form a suitable decoration. Four sizes, 1, 2, 3 and 4 years. A two-year size requires two yards of 36-inch material. Pattern, 10 cents.



5060.—A Dainty Frock.—Chiffon or georgette and lace or embroidery could be used for this style. It is also nice for radium silk, taffeta or crepe de chine. The flounces are mounted on a two-piece under skirt. Four sizes 8, 10, 12 and 14 years. If made of one material a 10-year size requires four yards 32 inches wide. To make as illustrated requires 3¾ yards of material with five-eighths yard of lace, embroidery or contrasting material 22 inches wide. Pattern, 10 cents.



4997.—For Many Occasions.—Printed chiffon voile is here portrayed. The model is also pleasing in taffeta, crepe de chine or georgette. The dress may be developed without the flounces and with long sleeves. Four sizes: 8, 10, 12 and 14 years. To make the dress as in the large view, will require [illegible] yards of 32-inch material for a 12-year size. If made with long sleeves [illegible] yards are required. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date spring and summer 1925 Book of Fashions.

Every
Cooking Convenience
for Rural Homes

The Alcazar Oil-Duplex is the ideal cooking range for farmers' wives. A three-fuel stove, equipped to burn either wood or coal and kerosene oil—singly or together.

This model keeps your kitchen warm in winter, cool in summer, and makes cooking the year 'round a real pleasure.

There are Alcazar models for every kitchen—from kerosene oil cook stoves, with every convenience that the city home enjoys from a gas range, to the latest types of coal and wood ranges.

The leading dealer in your town carries an "Alcazar" range perfectly adapted to your kitchen. See him—or write to us direct.

ALCAZAR RANGE & HEATER CO.

Quality Kitchen Ranges
Every Type, Style and Price for Every Fuel

To a Hampton Roof
the Kind of Weather
Makes No Difference

PENCO HAMPTON METAL is the greatest of all rust-resisting irons (not steel) and is made from a special formula that has proven its superiority over all others. We have made exhaustive tests for years: soil tests, acid tests, salt air tests and weather tests and know that in Hampton Metal we're offering you the best that money will buy: that is if you measure value by the number of years a roof will last.

For barns, sheds, pump and tool houses, in fact all farm buildings there is nothing else so good. It is fireproof, spark-proof and withstands the blistering sun, blustering winds, beating sleet and driving rains alike and, if properly grounded is one of the best lightning safeguards. Can be put on easily and quickly [illegible] Pressed Standing Seam, Imitation brick or stone, etc. NEEDS NO PAINT.

If there's such a thing as roofing permanently it's with Hampton Metal

You owe it to yourself to know more about how metal is made and why some is better and lasts longer than others. If you wish to include measurements of any space you'd like to cover we'll be glad to figure it and give you a price, including nails, and washers, delivered right to your station.

PENN METAL COMPANY, 25th and Wharton Sts. Philadelphia, Penna.

Send for Hampton Booklet and a sample of Hampton metal.

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth:—This week our page was very small, there were only four letters, but I enjoyed Cousin Ruth's. Wake up, wake up, Lackawanna County.

I have a pet dog and two pet kittens. The dog's name is Betty and the kittens' names are Aggie and Tom. It snowed a few days ago here, but the snow is nearly off the ground now.—Lucille Post, Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—I like to run and jump. In the last part of the winter and in the early part of spring I tap the trees for the sap to make maple sugar, which is fun.

I wish some more people of Potter County would get interested and join this club.—Howard C. Neefe, Potter County, Pa.

Dear Cousin Ruth:—I was very sick last week and I could not write to you and Forum friends.

I am twelve years old. I have two rabbits and we have a pair of geese and they have laid nine eggs.

We have set six hens on hen eggs and two hens on goose eggs.—Richard Staub, Venango County, Pa.

Hope you are better now, Richard. Sorry you were sick.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I am twelve years old and am in the fifth grade. I go to the Middletown School. I have about a mile to go. There is to be a festival at our school April the third. I have gone to school every day so far. I like to go to school, we have good times. We play lots of games. Our teacher plays with us sometimes. We certainly do enjoy our play.—Gertrude Hartge, Westmoreland County, Pa.

Dear Cousin Ruth and Forum Friends:—I am ten years old and live on a farm of about 128 acres, so, Cousin Ruth, you know there is lots of work, but I like it on a farm better than in the city. I have three brothers and one sister. We grow strawberries, raspberries, currants, dewberries, apples and lots of cherries. I don't have any pets. I had scarlet fever but now I am over it. —Vera Irene Hertzog, Lancaster County, Pa.

Answers to riddles published on the page last week:

1. In chapter one.
2. Ten cents.
3. Tom is Dick's grandfather.

Dear Cousin Ruth and Forum Friends:—I have a great many schoolmates and we play jump rope and leap frog and football. My favorite game is jumping rope. I live on a farm and my father plows and harrows the field. I always roll the field for him and I also take hay for him. I have a goat for a pet. The snow is all gone now. It will soon be time to dig the garden and plant flowers and vegetables.—Anna Davis, Burlington County, N. J.

Dear Cousin Ruth and Forum Friends:—I have been a reader of the Forum page for about three years but this is my first letter.

I am in the eighth grade in common school at Mill R[illegible]. We play up set the fruit basket, [illegible] base and many other games.

The snow is all gone now and we will soon dig the garden and plant the seeds.—[illegible], Franklin County, Pa.

Dear Cousin Ruth and Forum Friends:—I am twelve years old. I do not live on a farm. I have a pet dog. Her name is Fido. She will shake hands, walk on her hind legs and sit up on a chair. I enjoy reading the Forum page very much. I like to go to church and Sunday school, and I play the organ for church. We have twenty-two pupils in our school.

In the summer we pick strawberries and blackberries down back of our house. We have a car and a nice horse. She is a dappled gray and is seven years old.

I wrote a letter before but forgot to send it. I have two brothers and two sisters. I take music lessons almost every Saturday.—Viola Schenk, Wayne County, Pa.

Dear Cousin Ruth and Forum Friends:—Hello! how are you all? On Friday, when the paper comes, I always get the paper and read our page. I have two sisters and two brothers. I have twin sisters that were eighteen months old on the tenth of this month. I was twelve years old on the seventh of April.

We have about 650 chickens and we are getting an average of 400 eggs a day. We have about 550 young chickens.

I love to live on a farm. Living on the farm at this age is as good as living in town. I am going to take music lessons this summer.—Mary Zulder, Centre County, Pa.

"ALL ABOARD"
Dorn Preston, Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—I would like to join the Forum friends' club. I have been reading the interesting letters of Pennsylvania Farmer for a long time.

We live on a farm of seventy-five acres. I am eight years old and am in the fourth grade in school. I walk a mile to school every day.

There is a run down below the barn. We have four geese and one duck. It is fun to watch them in the water.—Tessible Elliott, Butler County, Pa.

Dear Cousin Ruth and Forum Friends:—I am in the sixth grade. I live on a farm which is back from the road. I have a pet dog. His name is Rover. My father has a herd of twenty-three cattle. Every summer I help my father do his haying. At school I play tag and catch. I help my mother and sister rake stones out of the road.—Bessie M. Benjamin, Bradford County, Pa.

Dear Cousin Ruth and Forum Readers:—I enjoy reading the letters on the Forum page so I thought I would like to join our club. My father has taken Pennsylvania Farmer for a good many years and he would not like to do without it. I am eight years old and live on a farm. I think the [illegible] is the nicest time of the year. My brother and I have some bird houses and we enjoy watching for the birds to come and make their homes in them. The robins and bluebirds have been here for some time. I hope the weather will soon be nice and warm. With best wishes to all the Forum friends and Cousin Ruth.—Ruth Louise Beegle, Bedford County, Pa.

You must be sure to join the contest, "My Bird Friends," Ruth. I know there are lots of interesting things you can tell about the birds that make their homes in your bird houses.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I live on a farm about four miles from town. I like to go to school and we had examination at school last Monday.

We have chickens, geese, cows, calves and horses on our farm. The birds are here and the Easter flowers are coming up.—Richard Staub, Venango County, Pa.

Dear Cousin Ruth and Forum Friends: May I join your happy circle? I sure enjoy reading the Forum page very much, it is very interesting.

I am nine years of age and live on a farm of about eighty-four acres. I go to Beckley School which is just a short distance from my home.

My pets are six cats and a bulldog; his name is Snub. Will add a couple of riddles and close.

1. Why is a cat's tail like the end of the earth?
2. What is the first thing a man sets in his garden?—Ruth Stuckey, Bedford County, Pa.

Dear Cousin Ruth and Forum Friends:—I have two sisters and one brother. My oldest sister works and my other sister goes to school with me. She is in the eighth grade.

I live on a large farm. We have thirty-eight cows, seven calves, five horses and many chickens. For pets I have two cats and a dog. The cats' names are Tom and Bluie; the dog's name is Jack.

We have a radio in the same house which we live in and we can hear much music from far away.

Cousin Ruth, here are a few riddles.

1. Four legs up and four legs down soft in the middle and hard all around.
2. When is it dangerous to hit a nail with a hammer?
3. As round as a biscuit as busy as a bee, the prettiest little thing I ever did see.
4. Why are travelling men unsafe to associate with?

Cousin Ruth, I never saw a letter from Orange County yet.—Marjorie Waibel, Orange County, N. Y.

Dear Cousin Ruth and Forum Friends:—I have been reading your letters in Pennsylvania Farmer for a long time and enjoy them very much. I am twelve years old and live on a farm. My dad works a sugar bush and I help gather the sap. We have seventy-seven gallons made and still making more.

I have some pets. I have a cat, his name is Timmy; a dark brown horse named Dexter, and a red and white dog named Ring. I ride Dexter and ride bareback. I go to Horse Run School. I am in the eighth grade.—Anita Perkins, Allegheny County, N. Y.

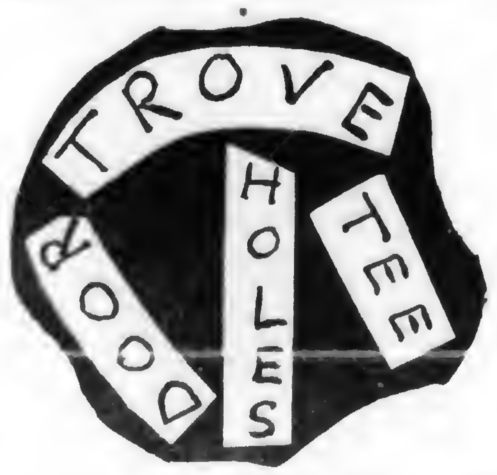
OUR LITTLE FOLKS' PUZZLE CORNER



Dear Little Folks:—The words you see in the picture are formed of letters which spell the name of a famous [illegible] whom I am sure you have all heard. When you have found his name send it to me on a POSTAL CARD so that it will reach me by May 2. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer, whose cards are the best in grammar, spelling, punctuation penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in the April 4 issue of Pennsylvania Farmer is: LIGHT.

The prize winners are: Charles Acker, age 9, Gap, Pa.; Leah H. Reunbecker, age 9, Selinsgrove, Pa.; Ruth A. Eyler, age 7, Orrtanna, Pa.; William L. Fleischman, Jr., [illegible] Jamesport, N. Y.; Bertha H[illegible] 9, Mechanicsville, Pa.; Kenn[illegible] age 1[illegible], Honesdale, Pa.; [illegible] Piper, age 9, Newville, Pa.; [illegible] Strausbaugh, age 13, [illegible]; Harvey Tingley, age 12, F[illegible]; [illegible] Weiler, age [illegible] N. Y.

Note:—Will Herbert L[illegible] send [illegible] a more complete [illegible] than "New Holland, Pa." [illegible] office at New Holland has [illegible] his prize with the mark "Unknown" stamped on the envelope.

PASSING EVENTS IN PICTURES

(Copyright by Underwood & Underwood)

1.—Ready for the cruise that is to restore his health—the King and Queen of England as they set out for the royal yacht.

2.—Impressive cavalcade accompanying the remains of Admiral Dewey when the hero of Manila Bay was removed from Arlington Cemetery to the Cathedral of St. Peter and Paul.

3.—A modern masterpiece of the scroll-worker's art, this grandfather's clock was carved by a Connecticut man.

4.—U. S. S. Memphis as she appeared when in drydock in the Brooklyn Navy Yard being overhauled.

5.—The Japanese ambassador and his family out for a stroll under the blossoming cherry trees which are a gift from his nation to ours.

6.—"Jim" was all dressed up for the show when he spied what looked like an old enemy. Puss is putting up a good bluff.

7.—Going! Going—bargains—anything from a tire to a teddy bear sold at the dead letter office in Washington.

8.—Secretary Mellon received congratulations on his seventieth birthday recently in his office in the Treasury Building.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

WE HAD a cheerful day. A barrel of hard cider had been set up in the yard, and I remember that some drank it too freely. The he-o-he of the men as they lifted on the pikes and the sound of the hammer and beetle rang in the air from morning until night. Mrs. Rodney Barnes and Mrs. Dorothy came to help Aunt Deel with the cooking and a great dinner was served on an improvised table in the dooryard, where the stove was set up. The shingles and sheathes and clapboards were on before the day ended.

When they were about to go the men filled their cups and drank to Aunt Deel.

I knew, or thought I knew, why they had not mentioned my Uncle Peabody, and was very thoughtful about it. Suddenly the giant Rodney Barnes strode up to the barrel. I remember the lionlike dignity of his face as he turned and said:

"Now, boys, come up here an' stand right before me, every one o' you."

He ranged them in a circle around the barrel. He stood at the spigot and filled every cup. Then he raised his own and said:

"I want ye to drink to Peabody Baynes—one o' the squarest men that ever stood in cowhide."

They drank the toast—not one of them would have dared refuse.

"Now three cheers for the new home and every one that lives in it," he demanded.

They cheered lustily and went away.

Uncle Peabody and I put in the floors and stairway partitions. More than once in the days we were working together I tried to tell him what Sally had told me, but my courage failed.

We moved our furniture. I remember that Uncle Peabody called it "the houseltree." We had greased paper on the windows for a time after we moved until the sash came. Aunt Deel had made rag carpets for the parlor and the bedroom which opened off it. Our windows looked down into the great valley of the St. Lawrence, stretching northward thirty miles or more from our hilltop. A beautiful grove of sugar maples stood within a stone's throw of the back door.

What a rustic charm in the long slant of the green hill below us with its gray, mossy boulders and lovely thorn trees! It was, I think, a brighter, pleasanter home than that we had left. It was built on the cellar of one burned a few years before. The old barn was still there and a little repairing had made it do.

The day came, shortly, when I had to speak out, and I took the straight way of my duty as the needle of the compass pointed. It was the end of a summer day and we had watched the dusk fill the valley and come creeping up the slant, sinking the boulders and thorn tops in its flood, one by one. As we sat looking out of the open door that evening I told them what Sally had told me of the evil report which had traveled thru the two towns. Uncle Peabody sat silent and perfectly motionless for a moment, looking out into the dusk.

"W'y, of all things! Ain't that an awful burnin' shame—ayes!" said Aunt Deel as she covered her face with her hand.

"Damn, little souled, narrer contracted—" Uncle Peabody, speaking in a low, sad tone, but with deep feeling, cut off this highly promising opinion before it was half expressed, and rose and went to the water pail and drank.

"As long as we're honest we don't care what they say," he remarked as he returned to his chair.

"If they can't believe us we ought to show 'em the papers—ayes," said Aunt Deel.

"Thunder an' Jehu! I wouldn't go 'round the town tryin' to prove that I ain't a thief," said Uncle Peabody. "It wouldn't make no differ'nce. They've got to have somethin' to play with. If they want to use my name for a bean bag let 'em as long as they do it when I ain't lookin'. I wouldn't wonder if they got sore hands by an' by."

I never heard him speak of it again. Indeed, altho I knew the topic was often in our thoughts it was never mentioned in our home but once after that, to my knowledge.

WE SAT for a long time thinking as the night came on. By and by Uncle Peabody began the hymn in which we joined:

"Oh, keep my heart from sadness,
God;
Let not its sorrow stay,
Nor shadows of the night erase
The glories of the day."

"Say—by thunder!—we don't have to set in the shadows. Le's fill the room with the glory of the day," said Uncle Peabody as he lighted the candles. "It ain't a good idee to go slidin' down hill in the summertime an' in the dark, too. Le's have a game o' cards."

I remember that we had three merry games and went to bed. All outward signs of our trouble had vanished in the glow of the candles.

Next day I rode to the post-office and found there a book adressed to me in the handwriting of old Kate. It was David Hoffman's "Course of Legal Study." She had written on its fly-leaf:

"To Barton Baynes, from a friend."

"That woman 'pears to like you purty thoro," said Uncle Peabody.

"Well, let her if she wants to—poor thing!" Aunt Deel answered. "A woman has got to have somebody to like—ayes!—or I dunno how she'd live—I declare I don't—ayes!"

"I like her, too," I said. She's been a good friend to me."

"She's has, sart'n," my uncle agreed.

We began reading the book that evening in the candle-light and soon finished it. I was thrilled by the ideal of human service with which the calling of the lawyer was therein lifted up and illuminated. After that I had no doubt of my way.

THAT week a letter came to me from the Senator, announcing the day of Mrs. Wright's arrival in Canton and asking me to meet and assist her in getting the house to rights. I did so. She was a pleasant-faced, amiable woman and a most enterprising house cleaner. I remember that my first task was mending the wheelbarrow.

"I don't know what Silas would do if he were to get home and find his wheelbarrow broken," said she. "It is almost an inseparable companion of his."

The schoolmaster and his family were fishing and camping upon the river, and so I lived at the Senator's house with Mrs. Wright and her mother until he arrived. What a wonderful house it was in my view! I was awed by its size and splendor, its soft carpets and shiny brass and mahogany. Yet it was very simple.

I hoed the garden and cleaned its paths and mowed the dooryard and did some painting in the house. I remember that Mrs. Ebenezer Binks—wife of the deacon and the constable—came in while I was at the latter task early one morning to see if there were anything she could do.

She immediately sat down and talked constantly until noon of her family and especially of the heartlessness and general misconduct of her son and daughter-in-law because they had refused to let her apply the name of Divine Submission to the baby. It had been a hard blow to Mrs. Binks, because this was the one and only favor which she had ever asked of them. She reviewed the history of the Binkses from Ebenezer—the First—down to that present day. There had been three Divine Submissions in the family and they had made the name of Binks known wherever people knew anything. When Mrs. Wright left the room Mrs. Binks directed her conversation at me, and when Mrs. Wright returned I only got the spray of it. By dinner time we were drenched in a way of speaking and Mrs. Binks left, assuring us that she would return later and do anything in her power.

"My stars!" Mrs. Wright exclaimed. "If you see her coming lock the door and go and hide in a closet until she goes away. Mrs. Binks always brings her ancestors with her and they fill the house so that there's no room for anybody else."

When the day's work was ended Mrs. Wright exclaimed:

"Thank goodness! the Binkses have not returned."

We always referred to Mrs. Binks as the Binkses after that.

Mrs. Jenison, a friend of the Wrights, came in that afternoon and told us of the visit of young Latour to Canton and of the great relief of the decent people at his speedy departure.

"I wonder what brought him here," said Mrs. Wright.

"It seems that he had heard of the beauty of Sally Dunkelberg. But a bee had stung her nose just before he came and she was a sight to behold."

The ladies laughed.

"It's lucky," said Mrs. Wright. "Doesn't Horace Dunkelberg know about him?"

"I suppose he does, but the man is money crazy."

I couldn't help hearing it, for I was working in the room in which they talked. Well, really, it doesn't matter much now. They are all gone.

"Who is young Latour?" I asked when Mrs. Jenison had left us.

"A rake and dissolute young man whose father is very rich and lives in a great mansion over in Jefferson County," Mrs. Wright answered.

I wondered then if there had been a purpose in that drop of honey from the cup of the Silent Woman.

I REMEMBER that the Senator, who returned to Canton that evening on the Watertown stage, laughed heartily when, as we were sitting by the fireside, Mrs. Wright told of the call of the Binkses.

"The good lady enjoys a singular plurality," he remarked.

"She enjoys it better than we do." said Mrs. Wright.

The Senator had greeted me with a fatherly warmth. Again I felt that strong appeal to my eye in his broadcloth and fine linen and beaver hat and in the splendid dignity and courtesy of his manners.

"I've good reports of you, Bart, and I'm very glad to see you," he said.

"I believe your own marks have been excellent in the last year," I ventured.

"Poorer than I could wish. The teacher has been very kind to me," he laughed. "What have you been studying?"

"Latin (I always mentioned the Latin first), Algebra, Arithmetic, Grammar, Geography and History."

"Including the history of the Binkses," he laughed.

There was never a note of humor in his speeches, but he was playful in his talk at times, especially when trusted friends were with him.

"She is a very excellent woman, after all," he added.

He asked about my aunt and uncle and I told him of all that had befallen us, save the one thing of which I had spoken only with them and Sally.

"I shall go up to see them soon," he said.

Activities of Al Acres: *A New Problem in Milk Distribution* : : : : : : By Leet

GEE, AL! IT SAYS HERE THEY'VE PASSED A LAW REQUIRIN' MILK TO BE SOLD ONLY IN ORIGINAL CONTAINERS! WHAT'S IT MEAN?

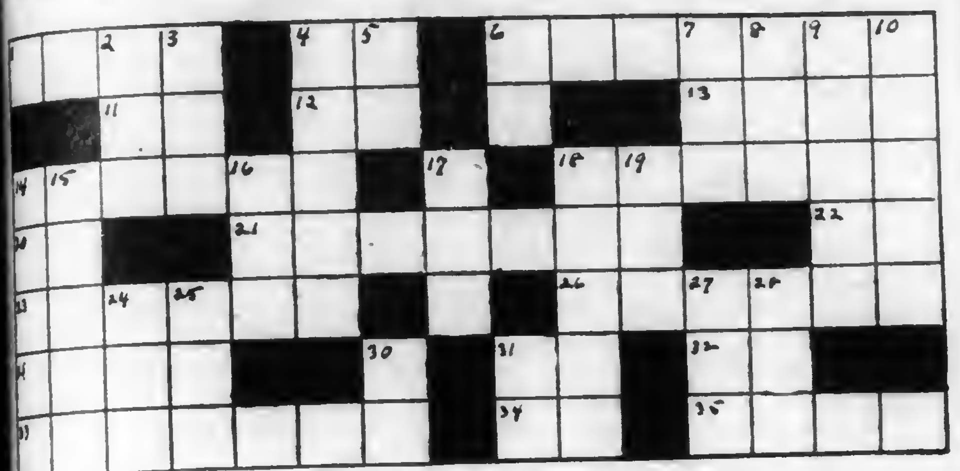
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 26 (across) is ARGOSY and 4 (down) is RATIO. You may begin anywhere in the puzzle. Follow the definitions carefully and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. Sobbed
4. Add another letter and you have Our Editor's initials
6. A farinaceous food
11. Advanced registry, abbreviation
12. Always

The people of the little village had learned that he preferred to be let alone when he had just returned over the long, wearisome way from the scene of his labors. So we had the evening to ourselves.

I remember my keen interest in his account of riding from Albany to Utica on the new railroads. He spoke with enthusiasm of the smoothness and swiftness of the journey.

"With no mishap they now make it in about a half a day," he said, as we listened with wonder. "It is like riding in a house with a good deal of smoke coming out of the chimney and in at the windows. You sit on a comfortable bench with a back and foot-rest in front and look out the the window and ride. But I tremble sometimes to think of what might happen with all that weight and speed.

"We had a little mishap after leaving Ballston Spa. The locomotive engine broke down and the train stopped. The passengers poured out like bees. We put our hands and shoulders on the train and pushed it backwards about a third of a mile to a passing station. There the engine got out of our way and after an hour's wait a horse was hitched to the train. With the help of the men he started it. At the next town our horse was reinforced by two others. They hauled us to the engine station four miles beyond where another locomotive engine was attached to the train, and we went on by steam and at a fearful rate of speed."

Mrs. Wright, being weary after the day's work, went to bed early and, at his request, I sat with the Senator by the fire for an hour or so. I have always thought it a lucky circumstance, for he asked me to tell of my plans and gave me advice and encouragement which have had a marked effect upon my career.

I remember telling him that I wished to be a lawyer and my reasons for it. He told me that a lawyer was either a pest or a servant of justice and that his chief aim should be the promotion of peace and good will in his community. He promised to try and arrange for my accommodation in his office in the autumn and meanwhile to lend me some books to read while I was at home.

"Before we go to bed let us have a settlement," said the Senator. "Will you kindly sit down at the table there and make up a statement of all the time you have given me?"

I made out the statement very neatly and carefully and put it in his hands.

"That is well done," said he. "I shall wish you to stay until the day after tomorrow, if you will. So you will please add another day."

I amended the statement and he paid me the handsome sum of seven dollars. I remember that after I went to my room that night I stitched up the opening in my jacket pocket, which contained my wealth, with the needle and thread which Aunt Deel had put in my bundle, and slept with the jacket under my mattress.

The Senator and I were up at five o'clock and at work in the garden. What a contrast to see him spading in his old farm suit! Mrs. Wright cooked our breakfast and called us in at six.

I remember we were fixing the fence around his pasture lot that day when a handsomely dressed gentleman came back in the field. Mr. Wright was chopping at a small spruce.

"Is Senator Wright here?" the stranger inquired of me.

I pointed to the chopper.

Inoculated Sulphur Triumphs over Potato Scab

Cheaply, Quickly, Easily, Thoroughly

There is Money Now in Potato Growing

Inoculated Sulphur is a scientific preparation which was developed at the New Jersey State Agricultural Experiment Station and is manufactured solely by Mechling Bros. Chemical Co.

Inoculated Sulphur destroys this devastating blight of potatoes which Hurts, Prevents Sale and Cuts Profit.

Inoculated Sulphur requires no special machinery, can be applied by hand, seed drill or lime and fertilizer spreader.

Inoculated Sulphur will make many scab-infested worthless lands valuable on which better and healthier food can be produced. It destroys the scab organism in a soil a thousand times better than merely treating the seed.

ESPECIALLY RECOMMENDED FOR SWEET POTATOES

Answer these questions and valuable information will be sent you:

How many acres of potatoes will you plant?
Send the name of your dealer

SPECIAL NOTICE:—Mechling's Inoculated Sulphur is highly recommended for live stock, dusting seed, fertilizer, and for all farm use.

MECHLING BROS. CHEMICAL CO.
Philadelphia CAMDEN, N. J. Boston

The Mechling Chemical Company is celebrated for Lime Sulphur Solution—Scale Oil—Arsenate of Zinc—Dry-Mix Sulphur Lime—Dusting Mixtures—Sulphur—Lead — Arsenate Lime — Bordeaux Mixture Powder—Copper Sulphate. Calcium Casenate, the Orchardist's favorite spreader and sticker.

Famous Swedish Treatment Stops Abortion

Foreign Treatment Now Giving Amazing Results in Herds Considered incurable. Easy and Safe to Use.

JOHN W. FROBERG

Chicago, Ill.—Complete freedom from the ravages of the disease contagious abortion that costs American farmers over twenty million dollars yearly is now possible through the use of an old Swedish abortion treatment according to statements from thousands of American users. They say the treatment completely stops even the worst cases and has saved entire herds though its remarkable powers.

John W. Froberg, a native of Sweden introduced the treatment in this country 9 years ago when he used it to cure his herd after all domestic treatments had failed. Its fame spread by word of mouth and wherever used proved practically 100 per cent successful. The treatment is easy to give, gets quick results and cannot harm the animals.

Cow, Calf, Control (C. C. C.), the American name of this treatment is now available for farmers everywhere and is distributed under the absolute binding guarantee that it will stop any case of abortion and that every otherwise normal cow will deliver a healthy calf or the treatment cost is refunded.

Any reader of this paper having abortion in their herd can receive free of charge and without obligation full information about this treatment by sending a postal to the Froberg Remedy Company, 16 Lincoln Street, Valparaiso, Indiana. (Advertisement.)

The Light in the Clearing

(Continued from page 25)

"I beg your pardon—I am looking for the distinguished United States Senator," he explained with a smile.

Again I pointed to the man with the ax and said:

"That is the Senator."

Often I have thought of the look of astonishment on the face of the stranger as he said: "Will you have the kindness to tell him that General Macomb would like to speak with him?"

I halted his ax and conveyed the message.

"Is this the hero of Plattsburg?" Mr. Wright asked.

"Well, I have been there," said the general.

They shook hands and went up to the house together.

I walked back to the hills that evening. There I found a letter from Sally. She and her mother, who was in ill health, were spending the summer with relatives in Portsmouth, New Hampshire. She wrote of riding and fishing and sailing, but of all that she wrote I think only of these words now:

"I meet many good-looking boys here, but none of them like you. I wonder if you remember what you said to me that day. If you want to unsay it, you can do it by letter, you know. I think that would be the best way to do it. So don't be afraid of hurting my feelings. Perhaps I would be glad. You don't know. What a long day that was. It seems as if it wasn't over yet. How lucky for me that it was such a beautiful day! You know I have forgotten all about the pain, but I laugh when I think how I looked and how Mr. Latour looked. He laughed a good deal going home, as if thinking of some wonderful joke. In September I am going away to a young ladies' school in Albany. I hate it. Can you imagine why? I am to learn fine manners and French and Spanish and dancing and be good enough for any man's wife. Think of that. Father says that I must marry a big man. Jiminy Crimps! As if a big man wouldn't know better. I am often afraid that you will know too much. I know what will happen when your intellect sees how foolish I am. My grandmother says that I am frivolous and far from God. I am afraid it's true, but sometimes I want to be good—only sometimes. I remember you said, once, that you were going to be like Silas Wright. Honestly I believe that you could. So does mother. I want you to keep trying, but it makes me afraid. Oh, dear! How sad and homesick I feel today! Tell me the truth now, when you write."

That evening I wrote my first love-letter—a fairly warm and moving fragment of history. My family have urged me to let it go in the record, but I have firmly refused. There are some things which I can not do even in this little masquerade. It is enough to say that when the day is ended I had deliberately chosen two of the many ways that lay before me.

Swiftly now I move across the border into manhood—a serious, eager, restless manhood. It was the fashion of the young those days.

I spent a summer of hard work in the fields. Evenings I read the books which Mr. Wright had loaned to me: Blackstone's "Commentaries" and "Greenleaf on Evidence" and a translation by Doctor Bowditch on LaPlace's "Mecanique Celeste." The latter I read aloud. I mention it because in a way it served as an antidote for that growing sense of expansion in my intellect. In the vastness of infinite space I found the littleness of man and his best accomplishments.

Mr. Wright came up for a day's fishing in July. My uncle and I took him up the river. I remember that after he had landed a big trout he sat down and held the fish up before him and looked proudly at the grac ful, glowing, arrowy shape.

"I never did anything in the Se ate that seemed half so important this," he remarked thoughtfully.

While we ate our luncheon he d scribed Jackson and spoke of th famous cheese which he had kept a table in the vestibule of the Whi House for his callers. He describ his fellow senators—Webster, Cla Rives, Calhoun and Benton. I remem ber that Webster was, in his vie the least of them, altho at his be the greatest orator. We had a d lightful day, and when I drove ba to the village with him that nig he told me that I could go into th office of Wright and Baldwin aft harvesting.

"It will do for a start," he sai "A little later I shall try to find better place for you."

I began my work taking only th studies at school which would qual ty me for surveying. I had not bee in Canton a week when I received rude shock which was my first less in the ungentle art of politics. Ro ney Barnes and Uncle Peabody we standing with me in front of a stor A man came out with Colonel Ha and said in a loud voice that Si Wright was a spoilsman and a drun ard—in politics for what he cou get out of it.

My uncle turned toward th stranger with a look of amazemen Rodney Barnes dropped the kni with which he had been whittling. felt my face turning red.

"What's that, mister?" asked Ro ney Barnes.

The stranger repeated his stat ment and added that he could pro it.

"Le's see ye," said Barnes and h approached him.

There was a half moment of si ence.

"Go on with yer proof," Rodne insisted, his great right hand tren bling as he whittled.

"There are plenty of men in A bany that know the facts," said th stranger.

"Any other proof to offer?"

"That's enough."

"Oh, I see, ye can't prove it toda but ye don't mind sayin' it toda Say, mister, where do you live?"

"None o' your business."

Swift as a cat's paw the big, rig hand of Rodney caught the man his shoulder and threw him dow Seizing him by the collar and th seat of his trousers our giant frien lifted the slanderer and flung him the roof of a wooden awning front of the grocer's shop near whic we stood.

"Now you stay there 'til I git coo ed off or you'll be hurt," said Ro ney. "You better be out o' my reac for a few minutes."

A crowd had begun to gather.

"I want you all to take a look that man," Rodney shouted. "H says Sile Wright is a drunkard an' thief."

Loud jeers followed the statemen then a volley of oaths and a momen of danger, for somebody shouted:

"Le's tar an' feather him."

"No, we'll just look at him a fe minutes," Rodney Barnes shoute "He's one o' the greatest curiosit that ever came to this to

The slanderer, thoroly frightene stood silent a few moments like prisoner in the stocks. Soon th grocer let him in at an upper wi dow.

Then the loud voice of Rodne Barnes rang like a trumpet [illegible] th words:

"Any man who says a [illegible] th of another when he can't [illegible] ought to be treated in the sa way."

"That's so," a number of vo answered.

LIVESTOCK

Review at local yards for week ending April 18, 1925: Market extremely dull. Beef steers slow compared with week ago, fully 25c lower, all grades showing decline. Top yearlings, $10.50, average weight, 1075 lbs; top heavies, $10.50; bulk of sales, $8.25@9.50. Bulls and heifers steady. Fat cows weak, 25@35c lower than week ago; top, $6.75; few choice, $7; bulk, $4@5. Canners and cutters about steady. Calves steady, slow movement; top vealers, $13. Hogs inactive, practically no receipts, tending steady.

Receipts for Saturday's market—Cattle, 6 cars from Penna points containing 222 head; 254 head driven and trucked in from nearby farms. Total, cattle, 476 head; 8 calves. Receipts for week ending April 18, [illegible] 25 cars; 22 from Penna, 1 Chicago, 1 Pittsburgh, 1 St Paul, containing [illegible] head, 730 head from nearby farms. Total cattle, 1276 head; 177 [illegible], 82 hogs, 22 sheep.

Wisconsin, Missouri and average New England, ½-blood, 50@52c; ⅜-blood, 50@51c; ¼-blood, 50c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, April 18.

Cloverseed, cash, $16.90 asked; October, $14.40 asked. Alsike, cash, $15.15; August, $13. Timothyseed, cash, $3.25 asked, May $3.30; September, $3.80.

FEED PRICES

The quotations are for transit and nearby shipments, Thursday, April 16, 1925, according to the Pennsylvania Bureau of Markets and the United States Bureau of Agricultural Economics, cooperating. The following quotations show the approximate cost of feed per ton (all in 100-lb sacks) and grain per bushel in carlots, sight draft basis, delivered on track at Philadelphia and Scranton.

Pure spring bran	$32.25
Coarse spring bran	31.75
Soft winter wheat bran	34.50
Hard winter wheat bran	34.00
Standard middlings	31.50
xSoft winter wheat middlings	40.00
xFlour middlings	38.00
xRed dog flour	45.50
White hominy	41.25
Yellow hominy	41.25
Gluten feed	33.90
36 per cent cottonseed meal	42.25
41 per cent cottonseed meal	45.00
43 per cent cottonseed meal	46.25
34 per cent linseed meal	43.20

xSuperior grades of these feeds usually command premiums.

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms river, Cape May rate points, add $1.40 per ton.

Market Summary

PENNSYLVANIA and New Jersey rhubarb has been more plentiful on the Philadelphia market during the past week. The market has weakened somewhat, but some growers have been shipping very fancy stock which has met a good demand and brought a premium of one to two cents over quotations. Pennsylvania mushrooms have been moderate in supply and the market draggy.

New Jersey asparagus appeared on the market early this week; the warm days are causing heavier cutting and supplies are increasing. The heavy supplies from California and South Carolina have weakened the market and altho the Jersey grass was in demand it did not sell as high as in other years. Nearby spinach has been slow most of the week, but closed strong.

The usual Saturday morning indifference on the part of the buyers was the only outstanding feature of the carlot produce market the morning of April 18. The North Carolina berry season opened this week and since the market was practically bare, this stock met a good demand. Supplies have increased and the market closed slightly weaker. Cabbage, new and old onions and tomatoes have been rather dull. New potatoes closed firm, but old stock moved slowly and the market showed a weaker tendency.—W. R. W.

The Butter Market

DEVELOPMENTS on the butter markets during the [illegible] April 18, adhered rather [illegible] the course which was [illegible] several previous weeks [illegible] opened with a firm situation [illegible] ent on all markets. [illegible] active and prices [illegible] ed at an advance of [illegible] cent. Toward the middle [illegible] this firmness disappeared [illegible] came quite cautious [illegible] the earlier advances were [illegible]

County News and Comment

(Continued from page 5)

[illegible] new seed corn.—F. H. G., April 14.

Crawford County, Pa.—The weather has been very fine and ground has dried up so farmers can plow and harrow their oat ground. A few have sown oats. County Agent C. D. Sprout has arranged a series of meetings for farmers in convenient places distributed over the county for the purpose of teaching them how to control the spread of the European corn borer. The pest has spread across Crawford County from the north during the last year. Mr. Sprout has two state specialists with him who explain the life cycle of the corn borer. They advise that corn be cut close to ground and as early as possible after maturity, burning all unfed corn stover and cobs, plowing under deeply all corn stubble late in fall, and especially the small sweet corn and corn patches in the home garden. The county has been quarantined against shipping or carrying corn outside of the district under quarantine. Farm prices: eggs, [illegible]; butter, 40@45c; milk, $2.24 for 3.6 test; potatoes, 50c; apples, $1.50; hay, $8@10 ton.—O. W. G., April 14.

Cumberland County, Pa.—Farmers are taking advantage of fine spring weather and hustling thru with their work. Most oats are sown, early potatoes and gardens planted. Not much rainfall. The first thunderstorm of the season, last night, brought with it a good rain and vegetation is starting off in good shape. Orchard spraying about finished for scale. Apricots, early peaches and cherries are in full bloom and prospects for good crop. The county potato growers' association had four carloads of Maine Russets shipped for seed. Owing to the low price of potatoes and scarcity of farm labor the acreage of potatoes will be less than a year ago. The first home-grown asparagus will be marketed during this week, which seems early. Wheat, $1.60; corn, $1.25; oats, 55c; potatoes, 90c@$1; eggs, [illegible]; butter, 50@60c.—A. L. B., April 15.

Indiana County, Pa.—Many more fields are being plowed up than usual. People from towns are renting an acre or two of land and putting out a garden. Work seems to be hard to find and many men are idle. Farm hands are being paid from a dollar up and board. Road building is expected to begin any time now and many idlers will find work there. A few acres of oats have been sown and many are just ready to sow. A large crop is being put out. Corn ground is also about plowed. Prices range near the same as last month. Eggs dropped a little but hay still stays low. Seed corn is being sold at $4 per double bushel and seed oats from $1@1.25 per bushel. This exceedingly dry spell we are having has been very hard on crops and all hope for the recovery of the fall grain has been abandoned. Hay and pasture land also need rain.—H. A. N., April 11.

Lehigh County, Pa.—Farm work is progressing nicely. Farmers are very busy plowing, harrowing and planting their spring crops. The grass fields look fine. There is an abundant stand of clover, timothy and alfalfa. Rye looks generally fair but there are many wheat fields that do not look good on account of too late seeding. There are quite a number of vacant farms in this section of the county. The potato market is very weak at present. Many farmers have some on hand. Farm labor is very high in price and in many places none to be had. Many farmers are tilling and raising what they can handle themselves and letting the rest go. Wheat, $1.50; corn, $1.40; rye, [illegible]; eggs, [illegible]; butter, 38c; potatoes, 40c. Hogs in active demand; butchered, 20c.—J. R., April 13.

McKean County, Pa.—Many farmers are busy plowing. About the usual acreage will be planted. Several new roadside stands have been erected this spring on improved roads. We had a poor spring for maple sugar making. Those who raise their own chickens report good hatches. Pastures will not be ready to use until May 1 at the earliest. Dirt roads, as a rule, are good; many have been scraped. Prices: eggs, 25c; butter, 50c, potatoes, 75c; oats, 80c.—F. J. H., April 12.

Mercer County, Pa.—Fair days but cold winds—frosts are freezing ground at night. Grain and grass fields suffering for want of warmer weather and warm rains. Pasture has made very little noticeable start yet. On account of so much dry weather spring plowing is well along. Many farmers have all their plowing done. Horses very low and hard to sell; sheep, hogs, poultry and good dairy cows sell readily and command high prices; hay and potatoes show sale and [illegible] of both. The European corn borer has been found in six townships which have been placed under quarantine [illegible].—J. W. B., April 10.

Middlesex County, N. J.—A week of unusually good weather has enabled potato growers in the southern part of the county to get a large percentage of their [illegible] ground. The percentage of certified seed planted is greater than ever before running as high as seventy-five to eighty per cent. Much of this is due to the activities of the New Jersey Potato [illegible] Committee and its special [illegible] agent, Mr Wm B. Duryee. A few [illegible] their seed. Fruit prospects [illegible] good. The dormant spray has been [illegible]

will begin this week. Mr. R. E. Harman, a graduate of Penn State Agricultural College was recently appointed as Boys' and Girls' Club Agent. A large number of farmers have had their seed corn tested by the State Seed Testing Laboratory. These tests show that seed corn is generally very poor.—O. G. B., April 14.

Mifflin County, Pa.—Farmers are very busy plowing for oats and corn. Not a great amount of oats sowed yet as farmers wish to plow their corn ground first. Some are hauling lime and fertilizer to apply to the oats and corn, others hauling manure. Indications are that the peach crop is frozen. Cherry and plum are blossoming, most wheat and grass fields are looking well. Good seed potatoes cost 60c a peck; eating potatoes, 20c a peck; dealers pay for wheat, $1.45; corn, $1.20; oats, 55c; apples, $1; butter, 40c; eggs, 25c; lard, 18c; chickens, 22c.—J. H. B., April 15.

Passaic County, N. J.—Quite a lot of plowing and the ground has been dry enough to plow even in the low places. Fruit trees are quite advanced for this time of the year and it looks as if a late frost would do a lot of damage. Strawberries have wintered well. The paved roads are in good shape but the macadam roads show signs of a hard winter with lots of holes in them.—N. D., April 13.

Perry County, Pa.—Weather the past few weeks has been excellent for farmers to get their spring work ahead. A good percentage of the plowing is done. Some are done sowing oats and have quite a bit to plow for corn. The wheat wintered well and both the wheat and grass are looking fine. Much of the corn last year was not matured sufficiently for seed and many farmers are making sure of their seed by testing or buying good seed. Chick brooders are getting quite a bit of attention at this time. A number of loads of good fat steers have been leaving the county at fairly satisfactory prices, compared with the four preceding years. Nearly all stock making some profit now. The spring sales were marked by good prices received. Prices: wheat, $1.40; corn, $1.40; oats, 50c; chickens, 22@28c; eggs, 21c; butter, 50c; veal, 12@13c; fat steers, $8@9.50; milk, $2.67 per hundred weight for four per cent butterfat delivered at Duncanon.—J. L. B., April 13.

Tioga County, Pa.—The maple sugar season began early and ranged over a much longer period than usual, but from all reports the output was much below normal. Weather for the past month generally fair and warm, tho there have been some high winds and snow flurries. A few farmers have begun seeding oats. Farmers' wives are making old biddy and the incubators keep busy. Dirt roads that have been dragged are fair. Some prices are: mixed chick feed, $3.50; corn and oat chop, $2.40; cracked corn, $2.65; bran, $1.85; standard middlings, $1.85; red dog flour, $2.15; cow feed, twenty-four per cent, $15@50; eggs, 25@27c; butter, 50c; potatoes, 35c; fertilizer, acid, $20.65; 2-8-10, $32.—P. W. L., April 13.

Washington County, Pa.—Spring coming slowly this year. Ground frozen a little almost every night except last week. No rain to speak of for some time, really dry for wheat and young timothy. Many wheat fields spotted and quite poor, save where top dressed with manure. Have had many seasons that seemed worse for wheat but much of the new timothy has no roots. No oats sown in neighborhood yet but plowing well along for both oats and corn. Not much change in farm prices except the usual seasonal drop in butter and eggs. Hay seems very hard to sell. Quite a demand for sheep this spring, bred ewes selling at sales up to $13. Had quite an epidemic of grippe in community but it is about gone and farmers are at work harder than ever.—B. McN., April 13.

Wayne County, Pa.—The executive committee of the Extension Association of Wayne County, composed of Hon. E. E. Kinsman, Amasa Keyes, George Gaylord, George Erk, Bert S. Hull, F. W. Stephens, William Erk, Richard B. Simons and A. E. Sheard, met in the Court House, Honesdale, Pa., Monday. Seven hundred herds in Wayne County are signed up for testing and the committee is showing increased activity in signing up dairymen. This week is known as good seed week in Wayne County, when over 2100 bushels of disease-free seed potatoes will arrive in Honesdale and at Lake Ariel, Pa., for distribution among the farmers of Wayne and Pike Counties. Our county is getting nothing but the best seed now. Wayne County Jersey breeders will meet April twenty-first. At this time the Wayne County Jersey Breeders expect to strengthen their local organization and join the Pennsylvania Breeders Club.—E. B. C., April 18.

Lancaster Tobacco Letter

UNDER the stimulus of heavy buying of 1923 tobacco, many new buyers were in the field last week contracting for the 1924 leaf still in the hands of the growers.

Altho a number of new buyers were operating the total amount of tobacco bought was less than previously this season because several of the largest buyers retired from the field. The situation, briefly, is this: Several big concerns bought up a total of about 8000 or 10,000 cases of 1923 tobacco from a number of small packers. These packers, having disposed of their old stock (or the bulk of it at least), immediately got busy and commenced buying up 1924 tobacco.

Prices have about held at their former level, with a disposition to drop, if anything. Sales have ranged from ten to sixteen cents per pound, depending upon the quality of the leaf, and some transactions have been recorded at less than 10 cents.

Look for Decrease in Acreage

There will be a decrease in acreage in the 1925 Lancaster tobacco crop, variously estimated at from five to ten per cent, if predictions made at the meeting of the Lancaster County Tobacco Growers' Association last week come true. Crop prospects were discussed by the growers and J. C. Brubaker, leader in the movement, talked on the need for cooperative marketing associations in this section.

The special committee of six appointed some time past, met last week and selected twenty-five tobacco growers, bankers and business men who will constitute the committee of organization for the proposed cooperative. — Garden Spot Farmer.

Production Costs

(Continued from page 3)

When it is suggested to farmers that they ought to have higher producing cows, many of them remark that they cannot afford to keep the high producers because it costs so much more to feed them: they figure that by keeping those individuals which require less expense in feed they make more money in the end. That this statement is not true is borne out by the tables on page three. It is true that the high producing cow eats more. The 3000-pound cow eats a total of $79.82 worth of feed while the 10,000-pound cow consumes $131.37 worth of feed. She, however, produces three and one-third times the quantity of milk with an increase of only $51.55 in cost of feed. This reduces the cost of milk from $5.26 per hundredweight to $2.50 per hundredweight. So, even tho the cost of keeping a high producing cow is greater, she produces so much more milk that the cost per unit of milk is much less and the total income per cow much more. When milk is selling at $3.00 per hundredweight, the 3000-pound cow has a gross income of only $90.00 while the 10,000-pound cow returns $300.00.

Which Cow is Best?

THE cow at the left on page three (the one looking toward the camera) produced an average of 305 pounds of butterfat per year for eight years.

The cow on the right produced an average of only 210 pounds of butterfat per year for three years.

More Milk Meant Lower Costs

As the production per cow increased, the table shows that the cost per hundredweight was reduced from $5.26 to $2.50 per hundredweight. Likewise, as the quantity of butterfat increased, the cost of producing it was reduced from $1.14 to $.57 per pound.

The average cost of milk for the five years included in the table was $3.23 per hundredweight and for butterfat $.75 per pound. If we assume that the average price for 3.8 per cent milk over this same period was $2.60 per hundredweight, it means that for a cow to pay all expenses and five per cent interest on her investment she must have produced an average of 8434 pounds. This is slightly more than twice what the average cow of the state actually produces, according to the last census.

This is not meant as an argument that farmers should replace all their low producing cows with high producers. That necessarily would create an immense surplus of milk. It means rather, that all the low producers should be disposed of, not only because they are not making a profit, but because their owners are paying for labor and feed anywhere from $10.00 to $75.00 per year in actual cash for the privilege of milking them.

If it is desired to maintain a uniform output of milk, it would be well to purchase enough high producing cows to give the same daily production as was produced by those disposed of. This will give a smaller number of cows and will reduce the expense for feed, labor, etc., on the entire herd.

From all the figures presented, it should be evident that the first sentence of this article is true, especially under present economic conditions. The low producing crop or class of livestock always consumes the profit on the high producing ones, and the only way definitely to place the blame where it belongs is to keep complete farm accounts and cost accounts on the more important farm projects.

Feed Price Quotations

Editors' Note.—Certain of our readers have informed us that they are unable to purchase feeds at the prices we quote in our weekly table of feed prices. As the quotations we publish are prepared by the cooperating agencies of the Pennsylvania Bureau of Markets and the United States Bureau of Agricultural Economics, we have asked those in charge of this work to give us a statement showing how the figures are collected and what they represent. The statement follows:

The primary purpose of this report is to inform the public regarding the cost of carlots of the various kinds of feed stuffs laid down at Pennsylvania points on a sight draft basis. The prices used are those prevailing in the Philadelphia market reported by dealers in that market. The summary of market conditions is prepared at Washington from telegraphic reports of market conditions over the entire country.

There is naturally a difference in quality in the various feed stuffs which are quoted. The figure given is the price at which feeds can be purchased which meet the requirements in chemical analysis for that particular feed. The quality of soft winter wheat middlings, flour middlings, and red dog flour varies considerably in different brands and prices vary to a similar extent. However, the figures quoted represent the prices at which brands complying with the analysis requirements can be purchased.

The quotations given indicate the prices at which carload lots can be purchased and, therefore, reflect the changes in the wholesale feed market. They do not represent the retail prices of feed in any particular community. Local retail prices must include labor interest, bad debts, rent, risk, profit, etc. Retail margins vary to such an extent that it is impossible to give [illegible] for

More Radio Experiences

A Little of Everything

WE HAVE had a radio receiving set more than a year and so far we have received over 168 stations. We hear from Los Angeles, California, and many other places. We also get Havana, Cuba, and San Juan, Porto Rico, which is the farthest station we have heard so far. When I am at the radio I always try to get orchestra music, in which I am much interested. Every Friday evening I tune in to station WEAF, New York City, to hear the Happiness Boys. I also tune in to station WIP, Philadelphia, at 7.00 A. M. every morning for the exercises which I think help me a great deal.

At dinner time I watch for the weather reports from WOO, Philadelphia. In the evening I listen to the market reports and on Saturday evening we tune to WLS, Chicago, and hear the old-time fiddling. On Sunday we listen to the church services in Pittsburgh, New York City and Philadelphia, all of which come in loud and clear.—E. S., Berks County, Pa.

Has Radio Fever

To the Editor:—I think if anybody ever had the radio "fever" I have it. I am a high school boy seventeen years old. Last September I erected a set in a friend's house, as I could not persuade or prove to the owner of our house that an aerial does not attract lightning or endanger the property when properly erected.

I enjoyed the concerts from nearly every state in the Union and nearly every province in Canada. I have listened to about 110 different stations which I consider a great accomplishment for a two-tube set. (I am not a radio salesman.) Among my stations the farthest are: KFI, Los Angeles, and KGO, Oakland, in California; WFAA, Dallas, WOAI, San Antonio, and WBAP, Fort Worth, in Texas; and PWX, Havana, Cuba.

Musical programs are my favorites but religious programs are greatly enjoyed. The band I prefer is the one that broadcasts from station WREO, Lansing, Michigan. The religous programs I enjoy most are those from the Y. M. C. A., of Brooklyn, which are transmitted thru WEAF, of New York City.

My radio is not powerful enough for loud-speaker reception but I have three pairs of head phones so that any other radio fan can listen, too. Recently I have installed my radio in my own home. All enjoy the programs, including my grandfather who lives with us. Many evenings we listen on the radio until after midnight.—K. P., Wayne County, Pa.

A Christmas Present

WE RECEIVED our radio as a Christmas present in 1924. It is a five-tube set and is said to be one of the best kinds made. We have heard from very many stations (I say many because I never counted them) with our set, and they certainly were worth while listening to. Never before did I realize as much as I do now what is going on in this wide world about us, but since we have our radio a very distinct picture has been revealed to me. On the farm these days, where there's a radio, there's as much music, entertainment and fun as in the heart of the cities.

There are many interesting things broadcasted. There are government lectures, travel talks, talks on music, college lectures, and political speeches. For the farmer there are special programs from the agricultural colleges and government bureaus, giving him information on everything having to do with farming and farm marketing.

We have had many interesting experiences with our radio and the one which I recall most clearly at present is the inaugural of Governor Smith, of New York. We held our regular New Year's gathering that day and when we tuned in station WGY, Schenectady, we heard everything explained so fully and clearly that the picture of Governor Smith walking down the aisle was almost as clear as if we had been present.

On New Year's night we stayed up all night "listening in" and heard some of the most wonderful music ever played, but nothing appeals to me more than to hear the old-time songs sung or played.—E. A. B., Wayne County, Pa.

Wild Vines for Beauty

(Continued from page 21)

in a neglected corner where other things refuse to grow. A bulb bed might be interplanted with roots of this vine which will make a tangled mass of greenery as the tulips or daffodils fade. A woven wire fence may be made a thing of beauty by the use of this common climbing vine.

Mountain Fringe

The mountain fringe I first found wild when, clambering over a rocky slope, I came under a canopy of delicate pale green feathery leaves and sprays of pearly pink flowers. A little search among the tumbled rocks showed me young plants which I dug up and carried home. In the yard was an old cherry stump, left to hold a bird bath. About this I planted these seedlings and for years the stump was wreathed with a garland of beauty. The mountain fringe is not a perennial, but if one once gets the plants, the abundant seeds will keep it flourishing, yet it never becomes a pest. Another name for it is the Allegheny vine.

Our common white clematis or virgin's bower is well known, as it flings its white flowers over fence and bush, where the feathery tailed seeds will linger even until snow flies. Like the ground-nut and mountain fringe, the clematis dies to the ground when frost comes, but makes tremendous growth when spring opens, quickly screening a porch or covering an unsightly fence

Bittersweet and woodbine (or Virginia creeper) are both woody stemmed vines and, as the years go on, will increase in size. So these should be planted where they will not interfere with anything else. To me there is nothing more beautiful in the fall than one of the wine-glass elms of New England, dripping with rich-hued wreaths of woodbine.

If you believe, as some do, that the clinging vine will kill the sturdy tree, plant the woodbine on a trellis against a porch, or border the lawn with a low wall of gray boulders, plant it thickly with woodbine and enjoy the contrast of green and gray in the summer, the crimson and gray in the fall, and the dull blue of the berries in winter.

The bittersweet recommended for planting is known botanically as celastrus scandens and is not solanum dulcamara. Both have [illegible] berries, but the fruits of the [illegible] burst open so that the red berry [illegible] set in a bronzy yellow cup, while the other has merely a pulpy berry. Bittersweet has an added charm as a part of Christmas decoration.—Ora Parker Phelps.

LEASE say: "I saw your adv. in Pennsylvania Farmer."

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

FELINE DISTEMPER.—What is the matter with my cats? An article in Pennsylvania Farmer of April 4 called it feline distemper, that disease seems to affect the head. Our cats all show same symptoms, vomit for some three days before they die. I feed them bread and milk. Will condensed milk hurt them? It doesn't seem to make any difference what I feed them. Have not been able to raise a cat for the past five years. This is surely a contagious disease and strange to say their eyes remain bright thruout their sickness. The cat seems to be in pain before it vomits, none of them have any nasal discharge, that's why I don't believe it distemper. I have a kitten now that we got one week ago, it has already become infected, shows same symptoms of the other cats which died. Had I better disinfect their kennel?—Mrs. J. F. H., Phillipsburg, Pa. In cats we meet with three different infectious incurable diseases, viz., distemper, diphtheria, and tuberculosis. In distemper the period of incubation is relatively long, varying from one to three weeks. The symptoms of distemper are complex and varying both in individual outbreaks and also in the individual. The disease may attack the respiratory, digestive, or cerebral systems, either singly, consecutively, or simultaneously and with varying intensity. Thus in some cases the purely catharral form, unaccompanied by any other manifestations, may occur; in others the symptom complex may occur, or rarely, the digestive tract may be the seat of the main invasion. Feline diphtheria is an infective disease of cats characterized by inflammation of the pharynx, with the formation of false membranes, and profound toxemia and is a very fatal disease in cats. Usually saliva dribbles from the mouth, which is held partially open, breathing is somewhat labored and accomplished with a wheezing, bubbling sound. A discharge, clear and watery at first, later becoming the color of blood serum, exudes from the nostrils and eyes. Sneezing and coughing occur, the cough being painful and expressed. Acute cases of diphtheria in cats that terminate fatally run their course in twenty-four hours or less. Treatment: promptly give a full dose of diphtheria antitoxin which, of course, must be administered hypodermically, and the antitoxin may be repeated with advantage in twenty-four hours and in my practice I invariably increase the dose. Tuberculosis in the cat is of far more frequent occurrence than is generally supposed, but your cats do not show the symptoms of this disease; they do not die as the result of diphtheria, either. Evidently they die of distemper without having much air passage trouble but more digestive disturbance. Clean and disinfect, using fresh lime wash, but not coal-tar disinfectant, while your cat is in its kennel. You can safely feed cats condensed milk. Cats are not scarce, therefore, I advise you to keep on adding new stock, for some of them are doubtless immune to this infection. If interested in cats and their disease, kindly clip and file this answer, for the writer dislikes to answer the same question too often.

SORE EYE.—I have a horse that has a sore eye, mucus forms in the eye, but his sight seems to be good. —D. S., Cherry Valley, Pa. Dissolve a teaspoonful of boric acid in one-half pint of water. Apply to eye two or three times a day. Give him two drams of Donovan's solution of arsenic at dose in drinking water or in soft feed three times a day. A bright light usually irritates an inflamed eye.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 80,000 farm families read Pennsylvania Farmer every week. Rate 8 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate 155 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

BRED-TO-LAY, White Leghorn pullets, 8 and 12 weeks. Sixty Ridge Farm, Palmyra, Pa.

WALTER'S Black Leghorn Chicks, the best. 10c. Circular free. Geo. Walter, Seven Valleys, Pa.

S. C. WHITE LEGHORNS, baby chicks 10c. Harvey Aukar, Liverpool, Pa.

ROCKS

BARRED PLYMOUTH ROCKS—Healthy, vigorous Parks trapnested 200 to 251 egg records. Beautifully barred and bred for high egg production. Eggs safely delivered $1.40 per 15; $3.50 per 50; $6.00 per 100. Mrs. Walter A. Miller, Williamsport, Pa., R. D. No. 3.

WHITE PLYMOUTH ROCK EGGS for hatching $1.25 per 15; $6.00 per 100, postpaid. White Pekin Duck eggs, 10c apiece, postpaid. Satisfaction guaranteed. J. G. Kennel, Atglen, Pa.

BARRED ROCK EGGS for sale. Thompson strain $6.00 per 100 prepaid. Mrs. Ralph Hasler, Berwick, Pa., R. D. 1, Box 93.

BUFF ROCK HATCHING EGGS $1.50 for 15 eggs. Mrs. Oliver Gilbert, Cochranville, Pa.

WYANDOTTES

WHITE WYANDOTTES from a heavy laying strain. Eggs, chicks, pullets and cockerels now ready. Byron Pepper, Georgetown, Del.

WHITE WYANDOTTE Imperial strain eggs $1.25 per 15; $6 per 100. A. R. Williams, Dickey's Mountain, Pa.

SILVER LACED Wyandotte hatching eggs 8c each. John Garman, Mt. Pleasant Mills, Pa.

HELP WANTED

AGENTS—Write for free samples. Sell Madison "Better-Made" Shirts for large Manufacturer direct to wearer. No capital or experience required. Many earn $100 weekly and bonus. Madison Corporation, 507 Broadway, New York.

I CAN help a few more men and women, 18 to 65, qualify for Government Positions $140 to $200 monthly. Write me immediately. C. Ozment, 167, St. Louis, Mo.

WANTED—Single men for general farm work, none but experienced hands need apply. Wages $50 per month, board, room and washing. Laurel Locke Farms, Pottstown, Pa.

WANTED—County Agent man or woman to sell [illegible] article used by every farmer [illegible] Purity Stamping Co., Battle Creek, Mich.

MISCELLANEOUS

CRUMB'S STANCHIONS pay for themselves. Mr. O. A. Looney, Walnut Grove, Mo., writes: "I can see that Crumb's Stanchions will pay for themselves in a short time. We are getting four to five gallons of milk per day more from fifteen Jersey cows than we did the old way." Send for booklet. Wallace B. Crumb, Box P, Forestville, Conn.

A REAL PROFIT sharing interest in big business will you take orders selling $40.00 value guaranteed all-wool finely tailored suits for $23.50? Get free certificate at once. Advance liberal profits. Complete sample outfit sent free by return mail. Abner Jones, 307 W. VanBuren, Department CK-100, Chicago.

FREE TRIP TO CALIFORNIA—Get three good responsible farmers to go with you to inspect California state-approved lands. Opportunity for one good man in each community to join largest land selling organization in U. S. Write for details. Herman Janss, 1197 Transportation Bldg., Chicago, Ill.

ROOFING—Remnants, smooth surface 1 ply, 85c; 2 ply, $1.05; 3 ply, $1.35 per roll. Buffalo House Wrecking & Salvage Co., 477 Walden Ave., Buffalo, N. Y.

SPECIAL Introductory Offer. 5 Cactus Dahlias unlabelled, 10 Gladioli bulbs mixed, all for $1.00. Postage 15c additional. Royal Sales Co., Frenchtown, N. J.

WANTED PHOTOS—We are constantly on the market for good photographs. Bulletin of information sent upon receipt of 10c. Paragon Photograph Service, Janesburg, N. J.

A GOOD 2 H. P. Bean Spray Machine, complete, ready to use, has one lead and gun. Shaadis Sisters, Jersey Shore, Pa.

FREE BOOK on sorting and sizing apples and peaches. Send for copy today. Cutler Manufacturing Co., 348 East Tenth, Portland, Oregon.

BEAUTIFUL FLOWERS—40 Gladioli, 4 Cannas, 2 Dahlias, $1.00 postpaid. Price list, many varieties, very low. Stoneroad, Yeagertown, Pa.

OATS—Cornellian Certified Seed Oats. If interested, write for folder on same. The Wilson Farms, Gainesville, N. Y.

FARM DITCH DIGGER—Build your own. For particulars write C. G. Alden, 225 E. Tenth Street, Erie, Pennsylvania.

GOOD sound recleaned Georgia Peanuts $6.75 hundred pound sack. Southern Warehouses, Box 1914, Atlanta, Georgia.

PLANTS

DODGES Famous Rio Grande Valley Bermuda Onion plants will produce the best and Earliest Mature Bermuda Onions. Large open field grown plants 500-$1.25; 1000-$2. Prepaid. Satisfaction guaranteed. Dodge Plant Farms, Raymondville, Texas.

TRANSPLANTED PLANTS—Postpaid. All varieties Cabbage, Cauliflower, Tomatoes, Aster, 3 dozen 40c; 100-$1.00; 500-$4.00; 1000-$7.00. Satisfactory delivery guaranteed. Catalog. Rohrer's Plant Farms, Smoketown, Pa.

PLANTS—Large, healthy, open-field grown. Cabbage, leading varieties $1.00-1000. Ruby King Pepper $1.50-1000. Tomatoes $1.00 1000. Porto Rico Sweet Potato Plants $1.00 100. W. Williams, Quitman, Ga.

PLANTS—Cabbage: $2.00-1000; Tomatoes: $2.00-1000; Peppers: $3.00-1000; Cauliflower: $4.00-1000. Parcel post delivered. Strong, healthy plants. Watkins Bros., Franklin, Va.

CABBAGE PLANTS

FROST PROOF Cabbage and Tomato Plants. Varieties: Early Jersey and Charleston Wakefield, Copenhagen Market, Flat Dutch and Succession. Tomato Greater Baltimore, Earliana and Livingston Globe. Prices, parcel post paid. 500-$1.50; 1,000-$2.50. Express collect, $1.25 1,000. We ship the size of plant you wish. Satisfaction guaranteed. Tifton Potato Company, Inc., Tifton, Ga.

CABBAGE PLANTS—10 million frostproof cabbage plants for sale. Early Jersey, Charleston Wakefield, Succession and Copenhagen Market. Prices 500-$1.50; 1000-$2.50; mailed prepaid. Expressed collect 10,000 $15.00 cash. If you want early cabbage and a fine crop, set our hardy "frostproof" plants. Shipped safely anywhere. J. P. Councill Company, Wholesale Growers, Franklin, Va.

FROST PROOF cabbage plants grown in our open fields, all leading varieties; 300-75c, 500-$1.25, 1000-$2.00 prepaid by mail or express. 5000 and over $1.50 per thousand charges collect. Tomato, pepper and cauliflower ready for shipment May 1st. Ask for our illustrated price list, satisfaction guaranteed. The Dixie Plant Co., Franklin, Va.

MILLIONS frostproof cabbage plants, all leading varieties, 100-30c; 500-$1.10; 1000-$1.75, postpaid. $1.00 per thousand, charges collect. Special price on lots of 50,000 and over. Book your order for tomato plants last of May and June delivery. East Virginia Plant Farm, Franklin, Va.

FROST PROOF CABBAGE PLANTS ready, standard varieties 300-75c, 500-$1.50, 1000-$2.25. Insured parcel post paid. 10,000 collect—$17.50. Tomato, pepper, May Delivery. Buy your plants from old established growers. Satisfaction guaranteed. J. T. Councill & Sons, Franklin, Va.

One Thing Farmers Demand From Motor Cars!

Above all other things, a farmer must be able to have complete confidence in his automobile. He cannot be annoyed even with minor troubles, because service stations are miles away. And there are no street cars handy should his car fail to perform at a critical time.

Confidence—think it over—isn't confidence in your motor car the thing you want and need *most?*

You can have such absolute confidence in the Oldsmobile Six—more now than ever before, because the recent improvements Oldsmobile and General Motors have built into its long-lived chassis make it just about the best car, and easily the best value, in its class.

Drive one of the 1925 Oldsmobiles—its quiet, quick and satisfying performance will convince you that here's a car you can buy with confidence and drive with pride!

Many Ways to Use Sweet Clover

This Valuable Soil Improvement Crop May Be Seeded in Fall, Spring or Summer

SWEET clover has been grown in Somerset County, Pa., for about ten years, but it is only during the last five or six years that its value has been appreciated. During the first years after its introduction, there was a great deal of speculation as to whether stock would eat it, and it was also frequently said that in many places it was considered a noxious weed.

The day of prejudice and ignorance concerning sweet clover has about passed and the people who have thoroly tried it are now its strongest admirers and are growing it under many conditions and for several purposes.

One of the Best of Legumes

Probably no one who has seen sweet clover grow doubts that, as a soil builder, it is one of the best of the legumes. I know of no other legume which gathers more nitrogen nodules, unless it be hairy vetch. In our soil the roots seem to go down into the soil as far as alfalfa and are usually covered with nodules. It is understood, however, that there must be inoculation. This inoculation may be by use of commercial culture or by mixing the seed with soil taken from a field that is thoroly inoculated. The soil must not be sour. This does not mean that in all cases lime must be applied to the soil and the seed treated with culture, for sweet clover often grows along the roadside and along railroad cuts and fills where the land is exceedingly poor but not sour. In such places there is usually some form of inoculation, as evidenced by the numerous nitrogen nodules on the roots.

Sweet clover used in a two or three-year rotation provides more humus for the soil than any other sod or green manure we can produce. For a two-year rotation it may be used in growing potatoes and can be sown in early fall, should you grow early potatoes, or it can be sown early in the spring following your late potato crop. In either event you will have all the green manure you can plow down and in addition all the nitrogen the average soil will require for any crop.

Turning under a sweet clover cover crop

If sown in early fall after taking up the early potatoes it will bloom the following spring and provide bee pasture from the latter part of June until November. It has been used by our neighbor as shown in the accompanying picture, as a cover crop. This crop was sown in sweet corn at the last cultivation and turned down by the first or middle of the following June for another sweet corn crop.

I have had good success by sowing sweet clover, with buckwheat the latter part of June and cutting it for hay the following year, and again turning down for buckwheat. This yields two crops in one year, and with the application of lime and commercial fertilizer, builds up the land faster than any other method brought to our attention.

The Three-year Rotation Method

The most common method of sowing sweet clover is in a three-year rotation of corn, oats, and clover. The grass seed mixture sown with the oats may be made up as follows: two or three quarts of sweet clover, two quarts of alsike clover, two quarts of medium red clover, and two or three quarts of timothy. This mixture, sown eight or nine quarts to the acre, insures a good stand and never fails to catch if sufficient lime has been applied to keep the soil sweet and the sweet clover properly inoculated.

I have used this three-year rotation and find it most satisfactory. I have also mixed a quart or more of alfalfa seed and find that after growing sweet clover several years the ground becomes thoroly inoculated and a very good stand of alfalfa may be secured. Alfalfa and sweet clover require the same kind of inoculation. Therefore, sweet clover is an excellent forerunner of alfalfa.—J. S. M., Somerset County, Pa.

(To be continued)

Concrete Walls without Forms

A New Method Was Employed in Building the State College Storage Cellars

FRUIT and vegetable growers of Pennsylvania have exhibited much interest in the concrete storage cellars that were built late last fall at the Pennsylvania State College. A comparatively new method of construction was employed,—a method which eliminated the wooden forms which are usually used in erecting concrete walls of the monolythic type.

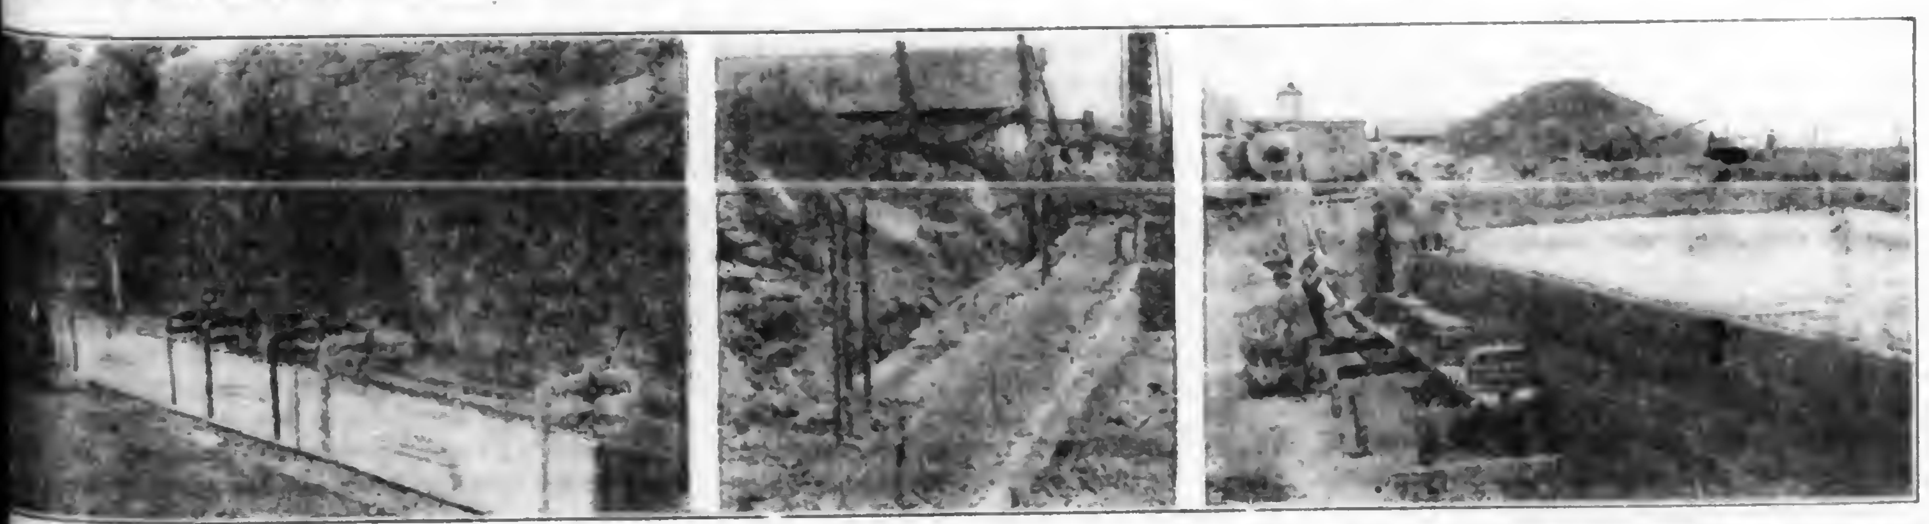
Instead of building forms for the walls and then pouring in a thin concrete mixture which required several days to harden, the builders of, these storage cellars used small portable forms and a mixture so thick that the form could be removed as soon the the concrete mixture had been packed into place.

The photograph on the extreme left at the bottom of this page shows the forms used in this new method of construction They are nine inches high and four feet long. It is an accepted fact that a dead air space in a wall or partition provides as good and cheap a means of insulation as is known. These light, movable forms make a double wall with a two-inch air space between. The walls are from four to five inches thick and are tied together with concrete connections every four feet.

The concreto is mixed with as little water as possible and is firmly tamped into the forms until they are full. The adjustment of a set screw releases the forms and they can be lifted off immediately and placed in a new position on the wall. The concrete mixture, containing very little water, holds its shape without support until it hardens.

Small steel bands hold the empty form in its new position and are covered by the mixture when the forms are filled. These bands are left in place; they give the two walls additional connecting bonds.

In the case of the State College cellars, the outside walls were reinforced with twelve by twenty-four inch pilasters in which were placed three-quarter inch iron rods. These are meant to insure the walls against any side thrust,—due to the presence of a large amount of limestone and loose soil,—that might tend to throw them out of alignment. The roof is a reinforced concrete slab. It is supported by the walls and by concrete columns. In preparing to put up a storage cellar of this kind it is always advisable to place drain tile even with the footings of the [to page 30]



Left: movable forms for wall construction. Center: first course after form was removed; double wall with air space. Right: wall nearly finished.

Vol. 91, No. 18. Phila., Pa., May 2, 1925 Whole No. 1459

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

All men make mistakes, but wise ones do not make the same mistake twice.

Beginning at Home

IT IS worth noting that present-day farm organizations are adopting the idea that reform, like charity, should begin at home. The success of farmers' cooperative marketing organizations and other self-help movements has proven to the satisfaction of everyone that the food producer can help himself most by improving his own methods of production and distribution. He knows that it will be time enough for him to worry about Wall Street, the railroads and the middleman when he has put his own house in order. He knows that he cannot make much headway reforming the business methods of others as long as his own way of doing things is haphazard and wasteful.

It is probably the increasing efficiency of the farmer that, above anything else, is making the country at large pay more attention when he speaks. Having won other people's respect by solving his own problems, he will be listened to when he registers his protest against things that aren't just right in other lines of business.

Daylight Saving

AS THIS is written, Governor Pinchot has not yet acted on the Grimes bill which would make it illegal for clocks registering other than eastern standard time to be shown on public buildings. It will make little difference whether he approves or vetoes this so-called anti-daylight saving act. On the "request" of the Mayor, the people of Philadelphia will turn their watches one hour ahead on April 26, no matter what the Governor does. On Monday, the 27th, the employees in the Capitol at Harrisburg will start going to work an hour earlier in the morning.

Not all city people are in favor of daylight saving, even tho the newspapers would make it appear that way. Their efforts to stir up resentment against the farmers who want the clocks left alone is one of the most regrettable features of the whole controversy. This question, like most others, has two sides. It is not more distrust and bitterness, but more knowledge of the other fellow's side, that is needed to bring about any sort of a satisfactory solution. We fail to see how anyone gains when the city dailies heap abuse on the farmer's head because his hours of work happen to be set, not by "the boss," but by Nature.

Those Commuters

THE railroads serving New York City carry more commuters into the city every weekday morning, and home every evening, than there are people in the whole state of Arizona. The average number of commuters coming into New York daily is 364,153, according to the New York City Transit Commission.

That means that more than a third of a million people who earn their living in New York City spend from thirty minutes to two hours or more on a crowded, stuffy train, for the sake of being able to rest and sleep in suburban towns or in the open country. Several hours added to every working day, besides the cost of railroad fare, is the price these people pay for the atmosphere and the quiet that country people accept without a thought.

Agriculture's Problems

WE SOMETIMES hear farmers and others question the usefulness of the experiment stations and their work. While such criticism is far less common now than it was a generation ago, still there are those who fail to realize what the scientific study of farm problems has done for them in the last twenty years. There is not a single phase of farm operation that has not been helped and improved by the application of facts discovered thru experiments and investigations made by the agricultural experiment stations. Even the farmers who have never given personal attention to the study of them have benefited by them thru the indirect method of learning from those who have. The time is at hand for different and further investigation of the new problems of agriculture and it is because of this need that the Purnell Act was passed by Congress. This Act appropriates $20,000 to each experiment station for investigational work the first year, and this amount is increased by $10,000 a year until the amount is $60,000 annually.

Secretary of Agriculture Jardine, speaking before a meeting of the agricultural college and experiment station leaders last week said in part:

"The Purnell Act recognizes in a substantial way the importance of finding solutions for the economic and social problems of the farm. With the growing complexity of modern economic life—the increasing division of labor, the concentration of large industrial populations in centers far removed from sources of food supply, and the development of a complex system of distribution—the economic and social problems of agriculture have multiplied. With these problems the experiment stations have not been adequately prepared to cope. Before the war the major efforts of the stations centered about production programs, which have yielded notable results both in increasing the quantity and quality of products produced and in lowering the cost of production. During the war production programs received even greater emphasis than before. Other phases of the industry were all but forgotten.

"Since the beginning of the depression, the demand for help has been insistent and the experiment stations have been doing their utmost to serve. Hampered as they have been by stationary or decreasing revenues on the one hand and rapidly amounting operating costs on the other, they have not been [illegible] adequately to meet the demands that have been made upon them. The Purnell Act is the government's answer to this appeal for help. It is believed the framers of the law intended that for the present at least, large emphasis should be placed on the economic and social problems of agriculture. It must not be forgotten, however, that productive problems are, after all, fundamental. Every possible reduction in the cost of production, every handicap to production removed or controlled, every improvement in the production of a variety or a breed, is a permanent contribution not only to agriculture but to national progress and development as well.

"In research we should always keep before us certain large objectives. Above all we should strive to help farmers establish a profitable and stable agriculture which will enable them to maintain suitable standards of living and build a rich and satisfying country life. At the same time we must have an agricultural industry which will adequately minister to the needs of the nation now and in years to come. Tho surpluses in recent years have unduly depressed prices, the day is not far distant when we shall have the problem of providing larger food supplies at prices that will be reasonable to the consumer and that will also yield the producer a fair return for his capital and labor. Our aim should be to develop a well-rounded and efficient type of agriculture in which waste is eliminated and the agricultural resources of the nation conserved for the use of generations yet to come. In our programs of work we must keep an eye not only to the present but also to the future. Ability to direct adjustments to current conditions is of vital importance, but a knowledge of long-time trends and economic cycles will be no less essential in charting a safe course for agriculture.

"This legislation for the first time gives ample authority for carrying on investigation in home economics. The problems of the home include some of the most vital factors in the development of a permanent and satisfactory rural life. If farm management studies have contributed to economy and efficiency in the farm operation, similar studies in home management should give equal returns in lightening the burdens of the farm woman and give added opportunity for the care and training of children. Money invested in studying these problems may not yield as immediate returns in the farm income as studies on the feeding of pigs, but may easily mean immensely more in the development of a sound and enduring agricultural civilization on which to found a prosperous and progressive nation."

The Hog Cycle

NO OTHER line of animal production has experienced a more uniform series of ups and downs than hog production. As a result, or possibly because of it, the market has gone thru a similar dance, but the extremes were at opposite points. How can these ups and down be ironed out so that the business of producing pork may become more stable and even? No plan has yet been devised or recommended, except that of an appeal to individual hog raisers to maintain a regular and uniform number of hogs.

Just now, due to high prices of corn and pork, the number of hogs in the country is at a low point. This will make for high prices during the next year or two and, if past experience is repeated, this will induce a large increase in the number of hogs which will be continued until there is a surplus and a low price will again reduce the number. For fifty years the hog business has gone 'round and 'round this circle, and it will probably continue to do so until farmers learn to regulate and gauge the business on a sensible basis.

Washington Letter

BUTTER TARIFF HEARINGS.—At the hearings before the United States Tariff Commission on the proposal to increase the tariff on butter under the flexible tariff provisions from eight to twelve cents a pound, E. B. Reid, representing the American Farm Bureau Federation, declared that the cost of producing butterfat in this country and in Denmark warrants the full fifty per cent increase in the tariff. He pointed out that New Zealand is potentially a much greater competitor than Denmark, the latter country having about reached its maximum output for export. The output in New Zealand has increased 120 per cent in the last seven years, and is likely to double its production within the next decade.

LOOKS FOR BETTER PRICES.—"Denmark might as well be located in the heart of our own dairy section," said Mr. Reid, "as far as cost of getting butter to our Atlantic seaboard cities is concerned. Denmark and New Zealand are in a position to dump butter on our markets with impunity. A much larger amount would have arrived in this country had it not been for Germany taking much larger imports during the last year. The vast amount of storage butter, one and one-half times the usual quantity, has been consumed. We are now down to a normal basis with much better prospects for the farmers getting the cost of production for butterfat. Unless more adequate protection is afforded, however, the production of butterfat in this country will decrease rapidly."

WOULD COLOR FOREIGN SEED.—Measures supported by the Farm Bureau which failed to pass the last Congress but which will be up for action next session, are the bill to authorize the coloring of Italian and French clover seed; the bill providing for federal certification of domestic field seeds as to varietal purity; the McNary-Vestal bill providing for standardization of containers used in marketing fruits and vegetables, and two bills to improve the intermediate credit system.

"During the last five years," says Mr. Reid, "approximately twelve and one-quarter million pounds of Italian red clover seed has entered the United States from Italian ports. This seed is classed by the United States Department of Agriculture and the state experiment stations which have thoroly tested it as 'no good.' It is not adapted to the production of clover in this country."

INTRODUCING BLIGHT-PROOF CHESTNUT.—The chestnut blight has continued to spread until it has almost covered the chestnut area of the country. It was first observed in New York state in 1904, and has swept southward thru Pennsylvania, Maryland and Virginia to northern Georgia and eastern Tennessee. The fine chestnut forests in this vast region are now nearly destroyed.

In its search for blight-proof chestnut varieties the Department of Agriculture has been experimenting for several years with chestnut trees from China. Two varieties of chestnuts have been found to be practically blight-proof. One grows wild in southern China and the other is found in northern China. It is planned to distribute the variety from South China in the southern chestnut areas and the variety from North China in the colder sections of this country.

AUSTRALIA TOPS U. S. AS WOOL COUNTRY.—The number of sheep in New South Wales, the largest sheep raising province in Australia, increased 4,091,692 head in 1924, according to reports from Australia to the U. S. Bureau of Agricultural Economics. The total number of sheep in New South Wales is now estimated at [illegible] which is about the same number as reported for the United States.

This increase is attributed to a large extent to the remarkably good season, there being no losses from drought. High prices for wool also induced sheepmen to stock up with sheep.

SUBSTITUTES HURT SHEEP INDUSTRY.—The South African sheep industry presents a rather discouraging situation, owing to low prices prevailing there and competition with other fibers. Artificial silk is said to have wiped out the production of woolen hosiery, and the increasing use of wool substitutes, especially in Europe, has decreased the demand for wool. Many manufacturers are said to be using ten per cent of wool while a year ago 100 per cent was common.—E. E. Reynolds.

Harrisburg Letter

TURN BULLETINS ON PESTS.—In the absence of funds to make anything like an adequate campaign against several of the pests menacing state food production, the State Department of Agriculture has mobilized the bulletin forces and turned them on the enemies of Pennsylvania farmers. Already there have been issued bulletins on the Japanese beetle, the apple maggot and several pests of like destructive habits. There will shortly be put out a series of bulletins on ways to identify and combat the Oriental peach moth, the corn borer, the bean beetle and other insects which have threatened to get a larger hold this year. The corn borer and bean beetle are both believed to have extended their area.

FORTY-SEVEN HEARD FROM.—Forty-seven counties of the state have filed complete reports on the agricultural census and the data is now being made up. Practically every other county, except Lycoming, has filed some of its books and others are under way. In the case of Lycoming this triennial assessment is just now under way.

FOUST WILL RETIRE.—James Foust, head of the state's dairy and food inspection work, either as commissioner or director, since 1907, will retire at the end of June after over a quarter of a century of service. He will go on the state retired list. The work of Mr. Foust has been praised in a number of trade journals and figures on file reveal an amazing list of samples taken.

DETOURS MULTIPLY.—Owing to the extensive highway reconstruction under way the list of detours on state highways issued by the Highway Department has shown a surprising increase in a few weeks. The highway authorities have started the annual oiling of roads and plan to finish before July 1.

OPPORTUNITY ON POTATOES.—The survey of railroad handling of potatoes in Pennsylvania by the State Bureau of Markets, makes it quite evident that Pennsylvania potato growers have plenty of opportunity further to develop their home market. Over 3000 cars were received in this state last year from distant states whereon the freight charges ran from twenty to thirty-six cents a bushel.

STOCK MORTALITY ASKED.—In the report blanks being prepared to send out for the May 1 crop reports in Pennsylvania are spaces for reports on losses of livestock in the last year. Horses, cattle, sheep, swine and other kinds are listed. Detailed reports will be asked on winter wheat and the condition of plowing. Farm labor, orchards and milk are also subjects for questions of timely nature.

EIGHTY FAIRS.—The fair list for the coming season shows eighty exhibitions will be held in Pennsylvania. The state will not only send out a circular giving an outline of requirements, but it will ask data as to exhibits of livestock, vegetables and other products. The state is about to send out a new list showing names and addresses of all state organizations and all county organizations having to do with agriculture and its allied branches.

MORE SPENT FOR FERTILIZER.—Figures compiled by the statistical bureau of the State Department of Agriculture indicate Pennsylvania farmers spent $9,976,000 for fertilizer in 1924, this being the highest sum spent for such material. The tonnage is estimated at 394,458 or an average of 2.44 tons bought. Eighty per cent of the farmers of Pennsylvania use fertilizer and over forty per cent used lime last year.

THE WHEAT OUTLOOK.—Statements by the State Department of Agriculture on the winter wheat are more cheerful than known at this period of the year in quite a while. The prospects are distinctly better than at this time the last two years, altho pasture is not as favorably ranked. Among the counties showing a figure of over ninety are some fairly big wheat producers, Adams, Bucks, Chester Lancaster, Lebanon and Montgomery. Cumberland, York, Perry, Berks and Franklin show a lower figure than ninety.—Hamilton, Harrisburg.

New York Letter

MILITARY TRAINING FOR BOYS.—The citizens' military training camps seem increasing in popularity with parents of boys from seventeen to twenty-four. Following a careful study of the American boy mind by specialists, the thirty days of free training and discipline will probably reach record figures at Plattsburg this year, as every parent whose sons have attended endorses the plan. Necessary expenses of railroad fare, housing and food are paid by the government and there is no obligation for future service for students beginning the training.

ARBOR DAY.—Central New York schools observe Arbor Day this week, mostly by the setting of trees. Cortland County sportsmen, schools and farmers will set 50,000 trees on one tract this week, and enough more on other farms to make it the banner tree setting county of the state this year.

NORTHERN CROP OF SUGAR SMALL.—Gouverneur maple sugar makers report an unaccountably short crop, after all expectations to the contrary.

MILK TO HOLD UP THRU FLUSH PERIOD.—Dairymen's League members expect milk prices to hold up thru the flush season better than formerly, as there is less surplus. Ninety per cent of the League's milk now sells as Class 1, with good demand. Bran is cheaper, $24 per ton in Buffalo in carload lots. Oil meal is $38.50, or as low as at any time last year. Pastures promise well, and hay has held out well, tho for those who sell, prices are disappointingly low. New York papers are uncovering great abuses of health rules in the "bootlegging" of milk and cream. Great quantities of cream from the West and Canada, with fat removed and cocoanut oil substituted, and "doctored" with chemicals, are found selling at $14 a can when the honest pure cream sells at $24 and better.

FARMERS JOIN BUREAU.—More than 3000 new farmers joined the Farm Bureau last week, and the campaign promises much increase in the state-wide membership over last year. Farmer support seems as necessary as government support if best use is to be made of this valuable service.—M. G. F.

New Jersey Letter

DURYEE NOW STATE SECRETARY.—W. B. Duryee has been appointed New Jersey State Secretary of Agriculture, succeeding Prof. Alva Agee. Mr. Duryee is well known thruout the state, having been active in state organization and county agent work for over ten years. Last fall Mr. Duryee was field secretary of the State Potato Improvement Committee which did more to focus attention upon standard grades and proper marketing methods than any one recent move in the potato business. Mr. Duryee is a potato specialist. He has been connected with the Walker-Gordon Farms at Plainsboro for several years and was county agent for Monmouth County for some years. He has the confidence of agricultural organizations and institutions in the state and is welcomed to his new office by many thousand New Jersey farmers.

POTATO PLAN GROWS.—The plan advanced this last winter for improving the marketing situation on New Jersey potatoes by the operation of a dealers' committee which would emphasize standard grades has been gaining in favor in recent months. The committee, which is composed of dealers in central New Jersey, has worked up a series of requirements which have been generally endorsed by distributors in New Jersey's potato belt. The elimination of field run stock is one of the features of the plan. Definite sizing rules for the different types of potatoes will be put into effect at the principal loading stations.

BEE COLONIES WEAK.—The unusual weather of the past winter caused the loss of many colonies of bees in New Jersey and keepers reported the live colonies weakened in many places. Few fielder bees in many of the colonies are left to gather the nectar and pollen necessary for stimulating the rearing of young bees. Keepers thruout the state are supplying frames containing honey and pollen to their colonies in larger amounts than usual, to meet the situation.

HEAVY FERTILIZER APPLICATION.—Reports from various central and southern New Jersey points indicate the use of fertilizer in much heavier amounts than last year. One large farmers' exchange in southern New Jersey states that it has distributed over 2000 tons more of fertilizer than last year, while dealers indicate a proportionate increase in other sections.

NEW PEACH VARIETIES.—Cross-breeding of thousands of peach seedlings at the State Experiment Station has resulted in the development of eight new varieties, which may be secured thru the Experiment Station. The new peaches are so well adapted to home orchards, the Station claims, that collections of four, eight and twenty assorted trees may be secured in such a way that the varieties will ripen from early August to early September. All of the varieties are yellow fleshed, of high quality and with one exception are freestone.—B.

County News and Comment

ADAMS COUNTY, PA.—The past month has been rather dry and warmer than usual. Wheat looking very well and grass fields, particularly the clover, showing up fine. Much of the plowing for corn is done. Fruit growers busy spraying and will be for the next thirty days. Prospects are for a full crop of apples, peaches, cherries, etc. Cattle wintered well, plenty of coarse feeds in the barns yet. Spring pigs scarce, not as many sows farrowing as usual. Prices: wheat, $1.62; corn, $1.50; eggs, 26c; butter, 35@40c.—A. R., April 21.

CAMERON COUNTY, PA.—Had the earliest spring this year that we have ever had, but had a long winter, as it began in November. Not much fall plowing done, so farmers will be pretty busy this spring. Pretty wet to do much yet. A few have oats sowed, but it is too cold for them to do very well. Frosts nearly every night and quite a snow squall April 16. "Peep-toads" have been yelling for about a month. That old saying that "they should only have ice freeze over their heads three times" didn't hold this year. Like lots of other old beliefs. We shall soon have improved roads from one end of the county to the other, a few miles to be graded this summer, getting ready for concrete. Seven miles being graded now for concrete that was started last fall and not finished. Prices on foodstuffs high at local store. Flour, $3.20 per 49-lb. sack. Country butter, 50c; creamery, 55c;

(Continued on page 29)

"Saving" Oil in your Ford is like trying to carry one more egg in a full basket

CARRYING one more egg in a full basket has been responsible for more broken eggs than many people would like to estimate. Of course, there's no necessity for dropping the whole basket, but when that *one* egg begins to slide, there's no telling where the thing's going to end—until it's "all happened."

It's like a Ford owner trying to save on cheap oil—the total possible gain isn't worth the risk. Suppose cheap oil would give as good mileage as Mobiloil "E"! Suppose your car would "get by" for a while without frequent repairs! Even imagine that it would continue to have lots of power and not quickly develop excessive carbon and fouled spark plugs! Even granting such fanciful claims, the saving—at best—could hardly amount to as much as $5.00 a year!

But with poor or incorrect oil, no Ford *will* deliver the power, the smooth operation, the satisfaction and freedom from repairs and expense that the Ford Motor Company build into every car they make.

And cheap oil, as Ford owners have universally discovered, *doesn't begin to give the mileage of Mobiloil "E"*. Even those oils which cost less per gallon than Mobiloil "E" really cost more *per mile*—due to the much faster rate of consumption. *More miles per quart*, more miles of smoother, more powerful, expense-free operation—these are the surest guides to economy and satisfaction.

For the differential of your Ford car use Gargoyle Mobiloil "CC" or Mobilubricant as specified in the Chart of Recommendations. For your Fordson tractor use Gargoyle Mobiloil "BB" in summer and Gargoyle Mobiloil "A" in winter.

(OUR FARM)

Where an Editor Works and Thinks

THE past week has been a good one for farm work. The soil was fit to work on all but one day, and we could afford to forego that because it gave us a good rain just as they finished setting the strawberry plants. Every plant seems to be growing and ready for a side-dressing of fertilizer, after which they will receive first cultivation. We find it safer to apply the fertilizer after the plants are started rather than in the shallow furrow before they are set. Unless the weather and soil conditions are just right there is danger of injury to the roots with a resulting poor stand of plants.

✚ ✚ ✚

EVERY kind of productive business requires considerable investment as well as time and labor before there is any return, and farming is no exception to the rule. That is one reason why so many people could not, even if they wished, go into any branch of farming. Unless they can start on borrowed capital, the hand-to-mouth plan of living practiced by the vast majority of people leaves them with no means of carrying on until returns begin to come in, even if they do secure a place to farm. For that reason most people must continue to live a treadmill sort of existence.

✚ ✚ ✚

A MAN who has been employed in the city for twenty years and commuting twenty miles every day recently said to me: "I can see nothing better for me in the future. I have been industrious and have tried hard. While I have been advanced until I am receiving what sounds like a good salary, yet I am in the same relative position financially that I was in the beginning; that is, I am just able to meet each month's living expenses. All I have for twenty years' effort is my life insurance and the experience of living."

✚ ✚ ✚

THIS man has a brother who began farming in a modest way about the same time the other began business in the city. Both felt that the city brother had the best outlook. The farmer brother resented the fact that Fate had consigned him to the farm. Today, he has a good farm on which is a good orchard and a fine herd of cows. He is now out of debt and his home is comfortable and well equipped. The difference in their conditions is due to the silent partner which the farmer brother took in with him at the beginning and which has been working hand in hand with him all these years. The partner is Mother Nature. The two wives are equally good. Yet, in spite of their relative positions, each brother good naturedly envies the other.

✚ ✚ ✚

WE FIND a hand garden seeder one of the best time and labor savers we have. It is a long, tedious, backbreaking job to place small vegetable seeds in the ground by hand and cover them properly. After one learns how to set the seeder for different seeds the planting of vegetable seeds is a short and pleasant task. It is best to try it out with seed on a clean floor and learn to set it by actual operation rather than to depend entirely at first upon the scale on the seeder.

✚ ✚ ✚

WE ARE plowing the heavy sod in which there is a good stand of alfalfa plants two years old. A good vigorous alfalfa plant well established is very tenacious and requires considerable power to cut off or uproot with a plow. We are using both a jointer and a coulter on the plow and are trying to tuck the heavy sod under so that the ground can be prepared for planting without having live sod on the top after we are thru. In lieu of a roller we are using a home made drag or floater before harrowing. A good spring-tooth harrow is a good implement in its place, but a newly plowed sod is not the place. We are going to try out our new harrow and report later.—R. P. K.

Farmers' Field Day

INSTRUCTION and recreation will mark the program of the Sixth Annual Farmers' Field Day exercises which will be held at State College on Thursday, June 18, according to a preliminary announcement by Professor T. I. Mairs, who is in charge of the arrangements.

Besides a program which will include many practical subjects, there will be a public sale of young dairy cattle, a model roadside market and community group games. For those who arrive early a special musical program will be given during the evening preceding the field day exercises.—A. L. B.

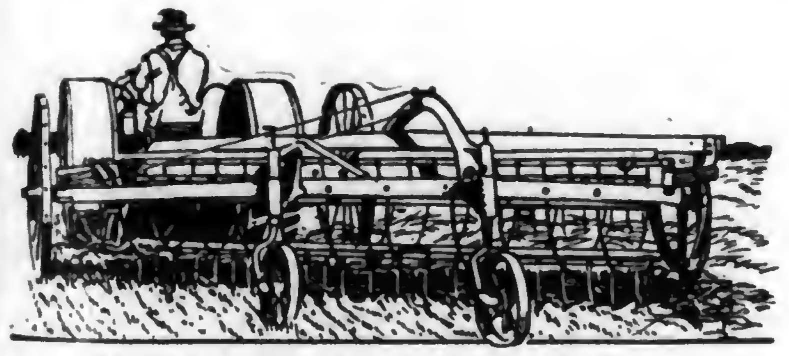
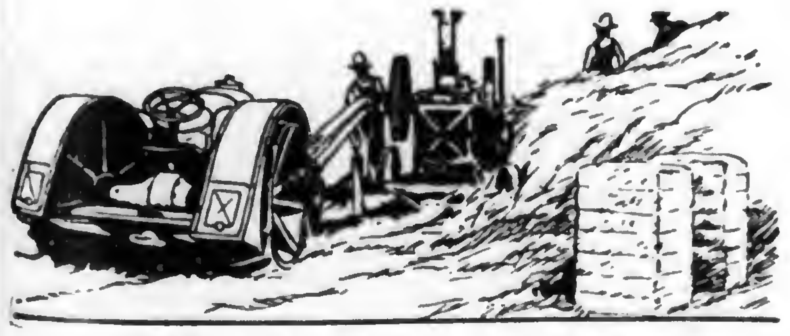
Make Hay the Fordson Way

Haying days are busy days on the farm—A few hours' delay may result in a crop spoiled.

With the Fordson, you can mow your fields quickly. You can do your raking and loading in a fraction of the time formerly required. You can store your crop ahead of the showers.



All haying operations are speeded up with the Fordson.

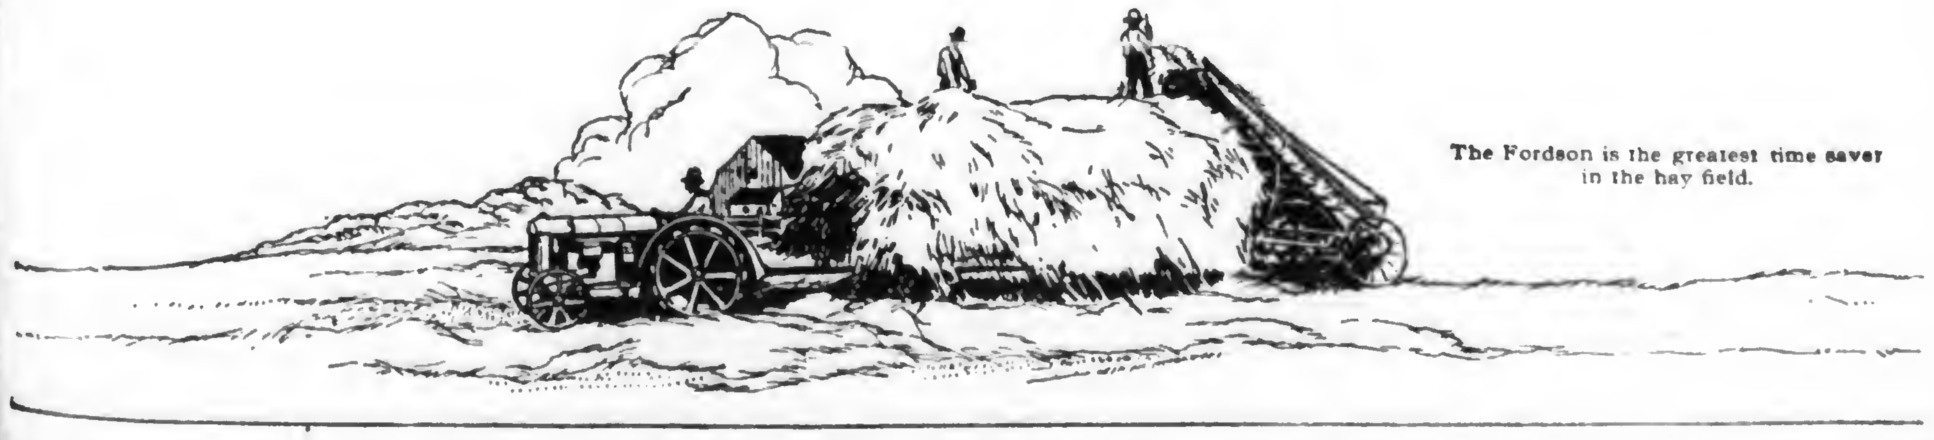


The Fordson supplies ample power for baling and all other belt work.

Any Authorized Ford Dealer can show you the advantages of making hay the Fordson Way.

Ford Motor Company
Detroit, Michigan

Fordson



The Fordson is the greatest time saver in the hay field.

Better Crops

You can increase your crop yield by greater attention to spraying. Prevent loss through fungous diseases by using

Triangle Brand Copper Sulphate

(Bluestone)

in your Bordeaux Mixture.

Triangle Brand is clean and pure and can be had in large and small crystals, also pulverized. Packed in new strong containers.

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser

Manager Pomona Gardens, Newark, Delaware

The Late Celery Crop

When is seed sown for the late celery crop, and how is it planted?—W. C. M., Camden County, N. J.

Seed for late celery is sown by some growers as soon as the ground can be worked outdoors, by others as late as the first of May. A very successful grower of my acquaintance gets the land ready the fall before he wishes to plant seed, plowing under manure in abundance. In spring, on his medium loam soil, it is only necessary to disc the ground, adding a good dose of commercial fertilizer. You could not do this on heavy soil that would get hard during the winter.

Some Like the Cold Frame

For the spring-made seed bed, some growers like to use a cold frame so that they can give the plants shade until they are strong. The soil in a cold frame that has been used for several years and manured frequently, is apt to be in good condition to receive the very small celery seeds, unless there has been a great deal of trouble with damping off in previous crops. In this case fresh soil can be used on the surface, but it may be better to set up a temporary frame on clean soil, or to get along without any frame at all, as the majority of growers do.

The custom is to prepare a piece of land with fine manure, perhaps sand if the soil is very heavy, trying to make it so that it will not bake on top. All rough stuff needs to be raked or harrowed out, and the surface made very smooth.

The seed is sown not over an eight-inch depth, either with a seed drill or by hand. If sown by hand some people broadcast it rather than plant in rows as they think they get a stockier plant. That is only true if the seed is sown thinly, and if the soil is weedy it is hard to keep a broadcast bed clean. Under most circumstances it is necessary to cover the bed to keep it from drying out.

Covering for the Bed

The covering when on a small scale may be burlap sacking, first washed well if it has come from fertilizer beds, or it may be straw or even a light manure mulch. It is important to remove this covering as soon as the first plants appear, as they are easily killed by the hot sun if they have grown much under the shade before exposure.

First class, stocky plants cannot be expected if the plants in rows stand much closer than a half inch, and when broadcast they ought to be no nearer than an inch each way. We think it pays to transplant part of our celery plants once before they go to the field, altho this year we shall try the undercutting plan recommended for tomatoes to see whether it will give good roots without transplanting. Heavy watering and fertilization of the plants do not favor the best root growth unless the plants have been transplanted once.—W. C. P.

Planning for the Future

A crop of cow peas like this, turned under, is bound to make crops grow.

For Black Aphis

Can any of your readers tell me what to do with a snowball bush I have? Every year when it comes in bloom a black insect gets on it and ruins the bloom and the leaves. I have tried several things on it but none do any good.—H. W. N., Washington County, Pa.

It is almost impossible to control the black aphis on the old fashioned snowball. The best thing to do, if you wish to try again, is to spray the bush with a tobacco extract, such as you can get from a seed or hardware store, beginning as soon as the leaves appear or at least before they begin to curl up. After the leaves are curled up, you cannot hope to kill the plant lice with any spray. The Japanese snowball is a good substitute for the common snowball and is not subject to the attacks of lice.—W. C. P.

Old Orange Crates

A TRUCK grower of the county has found a good use for several old orange crates. These are fastened high on the workshop wall to hold small tools, twine, spare panes of hotbed glass, dibbers, and those other things that have a way of getting lost. They furnish the pigeon holes that business men use for envelopes and paper, only in a larger size better adapted to the needs of gardeners.

Why high up? First, because most needed things, like the saw, hammer, nails, are beneath them, and second because the children do not find it so easy to borrow out of the high-up boxes.—W. C. P.

Tommy—You women bear pain more heroically than men.

Hattie—I suppose a doctor told you that?

Tommy—No, a shoemaker.

Vegetable Notes

THE annual temptation to cut young asparagus too long will soon be upon us. It's a big temptation, too, when prices are good, almost as great a temptation as it is to a peach and apple grower to leave his peach fillers in too long. The rule is to cut the young asparagus the first season of cutting, that is, the second year in the field, for only half the full season, then to allow the tops to grow and prepare for a bigger crop the following year.

It will not do any good to fertilize the young bed more heavily than usual in order to make longer cutting safe. The plants cannot make use of that extra plant food until they have foliage, so that on sandy soil it is possible to lose much of the soluble nitrogen before that time. It has been shown that asparagus shoots take more nitrogen from heavily nitrated soils than from others receiving less fertilizer, but there is no proof that the shoots are any larger on that account.

* * *

The best soils for flats we have used this spring consisted of a mixture of last season's hotbed soil with a layer of sand added. There was about eighteen inches of packed manure and four inches of loam soil above the manure. This stood all summer and fall, and in the fall two inches of coarse sand were put on top to bed celery roots in for storage. In midwinter the whole thing was brought indoors, sifted, and has produced tomato, cabbage, pepper and celery plants in great style, with almost no disease.

Some folks might have preferred to dig out the bed late in spring and turn the mixture several times during the summer. This would not have improved our mixture, so far as we can see, and besides we grew tomatoes on stakes in these beds during the summer. It was handy to have soil in the frames during fall and winter, as it was available for use in the coldest weather.

* * *

Treatment for cucumber beetles and lice cannot be started too soon after the pests appear on the plants, nor be given too thoroly. It must be remembered that these insects carry disease as well as destroy leaves, and the diseases are harder to combat than the insects themselves.—W.C.P.

A Valuable New Book

MANUAL OF VEGETABLE-GARDEN DISEASES—In no line of agricultural development has there been greater progress made than in the identification and control of plant diseases and pests. It is necessary for the fruit and vegetable grower to be fully competent and prepared to combat the thousand-and-one troubles which may attack his crops. The new book with the above title, written by Charles Chupp, Assistant Professor of Plant Pathology at Cornell University, and published by The Macmillan Company, New York City, is the most comprehensive one on the subject we have seen. The author has treated with some detail practically every disease affecting vegetables, discussing the relation of soils and weather, and giving the latest methods of control where control is possible. The chapters, twenty in number, are arranged alphabetically. The book contains 646 pages, 155 illustrations, a glossary of terms and a complete index. The price is four dollars. R. P. K.

"Now in case anything should go wrong with this experiment," said the professor of chemistry, "we and the laboratory with us will be blown sky-high. Now come a little closer boys, in order that you may follow me."

Let's go to the Movies!

THE Paramount magician waves his wand and you are off on your travels into the land of laughter and tears, sighs and gasps, love and adventure—something different to chores!

See the better motion pictures regularly—it's a deep and thrilling experience you need.

You can do this at some theatre near you. *Paramount Pictures are scheduled there now!* The kind of films that make any community a better place to live, and a better place for young folks to *stay!*

Satisfy your curiosity about the modern life of the great outside world this way. Taxes and work seem lighter when good entertainment sparkles in the evening!

Enjoy Paramount's art in such pictures as The Alaskan, Peter Pan, The Light that Failed, The Spanish Dancer and dozens of others, all representing screen entertainment of the better kind.

Whether you want a great drama of youth's struggle for success in the metropolis, or a breath-taking mystery play or a picturesque story filmed in foreign lands, or a thrilling Zane Grey production of life in the open, depend on it, *Paramount makes it best*, because leadership draws the best talent.

Follow that Paramount name and trademark. It represents the highest ideals of wholesome entertainment. The people who appear in pictures come and go, live and die, but Paramount ideals live for ever.

Make Paramount the entertainment side of your life, and watch the difference!

Just as any town's a better town with the better pictures, so any farm's a happier farm with Paramount a *habit*.

Get the habit. We're doing the rest!

Go by this name and trademark and you'll go right!

Three at Once!

It is just as important to keep your potatoes free from blight as it is to fight the beetle, flea and other profit-destroyers. If at the same time you can invigorate the crop and increase the yield accordingly, at no additional cost, it means **clear gain.**

POTATO SPRAY does all of this, enabling you at one operation to fight off both classes of plant enemies and invigorate your plants. It is a non-freezing powder form of Bordeaux and arsenate compounded with great care—an insecticide and fungicide put up by a company noted for its farm fertilizers and chemicals.

Write today for full details.

Eureka

Traction Sprayer

Does the biggest, most necessary job in crop raising. Insures investment in crops and increases yield from 50 to 200 per cent. Eliminates bugs, mold and blight. Quickly sprays potatoes, tomatoes, garden truck, cabbage, cucumbers, pickles, tobacco, beans, sugar beets, celery, etc.

The Eureka has 1, 2 or 3 nozzles per row and 4, 6 or more rows per boom. Wheels adjustable to various width rows. 60 to 100 gal. tanks with double or triple action pumps. May be equipped for spraying orchards and bushes.

In stock near you. Write today for catalogue on Eureka Sprayers and Potato Machines

Eureka Mower Co., Box 1406 Utica, N.Y.

BETTER CROPS FROM THE ONE HORSE FARM

The small farm is just the place where compact and efficient work will be done by the

Clark CUTAWAY One Horse Disk Harrows

Market gardeners, truckmen, florists and others will obtain greater yields and bigger profits from the use of these light draft 1-horse harrows.

In several styles and types; one at least, just what you need. Disks are forged sharp—dust-proof oil soaked hardwood bearings.

Send for book "The Soil and Its Tillage"—and our new catalogue; also names of nearest dealers.

Nut Grafting

In a recent issue of your paper I saw an article on nut grafting. You say, use one-year-old wood for grafts. Does this mean wood of 1924 or 1923 growth?—R. A. K., York County, Pa.

Your inquiry has been referred to me by Pennsylvania Farmer. By one-year-old wood, we mean wood that grew during the season of 1924.—S. W. Fletcher.

Fire Blight on Pears

I saw the article on fire blight on pears. I used to have the same thing on my Kieffer and Bartlet pears until I got to spraying them with a commercial dormant spray. The fire blight all disappeared and I have seen none since. With the same spray I also sprayed a couple of Bartlet pears for a neighbor that were nearly dead wth the result that new growth started and in two years three baskets of pears were picked off these two trees.—J. E., Montgomery County, Pa.

For a number of years sweeping claims have been made that this patented spray material is a specific against fire blight, as well as a remedy for scale insects. These claims have not been established by definite experimental work, altho some fruit growers, most of whom have not made careful comparisons between treated and untreated trees, are convinced that benefit has resulted.

So far as is now known, the only satisfactory method of controlling fire blight, aside from preventive measures such as keeping the trees growing slowly and selecting resistant varieties and resistant root stocks, is to cut out the winter hold-over cankers.

The Pennsylvania State College is now conducting a thoro investigation of this matter, in cooperation with the firm manufacturing this material; the results may be expected to definitely prove or disprove the contention.—S. W. F.

Early Bearing Spies

When well grown, the Northern Spy is one of the finest varieties of apples. It combines large size and fair color with the highest quality. Some of the northern counties of Pennsylvania produce excellent Spies, which always command a premium in the market. The finest specimens of this variety I have seen were produced in Wyoming County. In the southern counties of Pennsylvania and New Jersey the Spy becomes a rather indifferent fall variety, and drops early. It is a northern fruit. In the north, several generations of apple lovers have acclaimed it the king of fruits.

But the Spy, like all other kings is not without certain failings. It is subject to scab, and it is often poorly colored unless the tree is well pruned. Its chief fault, however, is slowness in coming into bearing. Under some conditions, especially on heavy soils, it does not begin to bear freely until twelve or fourteen years old. This is too long to wait.

It Is Losing Favor

Wagener, which is almost as good a dessert variety, as grown in the northern counties, comes into bearing in less than half that time, and so do Stayman, McIntosh, and many other good sorts. Hence the Spy is gradually losing favor as a commercial variety. Its prestige as a high quality sort cannot wholly atone for those twelve barren years.

There is a way, however, to save this splendid apple from extinction. That is to top-work it upon other sorts. If grafts of Spy are set in established trees of Delicious, McIntosh or some other thrifty and hardy variety, these grafts will begin to bear in three or four years. Delicious is one of the very best stocks for this purpose however much it may hurt the feelings of some people to suggest grafting a Delicious to any other variety.

When to Do Grafting

The work is best done when the stock trees are three to six years from planting, using whip grafting on the younger trees and smaller limbs, and cleft or cerf grafting on the older trees and larger limbs.

Summer Rambo, another magnificent variety where it thrives, particularly in the southern and southeastern counties, also is very slow in coming into bearing and can be handled in the same way.

Both Spy and Summer Rambo are remarkably vigorous and healthy in tree and regular in bearing after they once come in. They are too valuable to be lost from our fruit lists because of this tardiness. They bear apples that are good to eat, which cannot be said of half the sorts that now have a greater reputation on the market and are being more largely planted.—S. W. F.

Spray from Ground

It is extremely difficult to control aphids on apple trees by spraying unless a systematic method is followed in spraying each tree. In experiments conducted in apple orchards in western New York by the entomologists of the State Agricultural Experiment Station at Geneva, it was found that when spraying was done from the top of the spray tank the results were quite uncertain, due to the fact that the insects congregated on the lower branches of the trees where the spray mixture failed to reach them. At the same time in orchards where the Station spray system was followed, in which the spraying was done from the ground and under the trees, practically complete control of the pests was accomplished.

In the Station method, the spray outfit is equipped with a sufficient length of hose to enable the nozzle-man to work from the ground and under the tree. He then takes up certain designated positions in spraying each tree which insure the spray mixture reaching the underside of every branch and twig. By moving from place to place and by maintaining a pressure of at least 200 pounds at the spray tank it is claimed that each tree can be completely covered in a relatively short time.

First in County

John Haver, Jefferson, has purchased the first combination spray outfit to be bought in Greene County, according to County Agent [illegible] of L. F. Engle. A dormant spray of lime sulphur was satisfactorily put on with the first spray gun used in the county and those who watched the demonstration were very much pleased with the work done by the machine.—A. L. B.

Lice on Rutabagas

Rutabagas, often grown by the farmers in trucking distance of the Philadelphia market, may be made a sure crop if methods to control the aphid or plant lice are used. Anyone who has ever grown rutabagas realizes the uncertainty of having the crop mature if the lice set to work after the young plants have started.

A Sure Control

Nicotine sulphate applied to the plants as soon as the first aphids are noticed at work, either in the form of a spray or a dust, is a sure control of the pest. If there is a potato sprayer available which is equipped with a Nixon boom and qualified to maintain 200 pounds pressure the following spray formula applied at the rate of 100 gallons per acre will be effective: Nicotine sulphate, 40 per cent; laundry soap, 1½ pints; water, 100 gallons.

In order that the spray reach the under side of the leaves the nozzles must be about two inches from the ground so that the spray from opposite nozzles will pick up the leaves and whirl them so that the under surfaces will be thoroly drenched.

If an efficient sprayer is not available a traction duster may be used, or if the amount grown is one acre or less, a nicotine dust may be prepared at home and applied with a knapsack duster. A two per cent nicotine dust applied to the rutabagas in the heat of the day will control the lice efficiently.

If You Mix Your Own Dust

It is economical to mix your own dust according to the following formula: Hydrated lime, 50 pounds; nicotine sulphate, 2½ pounds.

Bulletin No. 186, issued by the Pennsylvania State College, discusses the control of plant lice on vegetables and the methods of mixing your own dust. If a grower desires to raise rutabagas he should prepare to control the aphids. Any desired information may be obtained from your county agent.—H.

Lost Cantaloupes

Last year I tried to raise cantaloupes between the rows of young peach trees, one row between the trees. This method was used on about three acres. We gave these cantaloupes the best of care and fertilization. Everybody admired them as did we and looked forward to a heavy crop.

As the crop was beginning to mature some ripe fruit, wilt began to appear. We sprayed with Bordeaux, straddling the rows with the potato sprayer. Then the vines became too large to straddle, so we quite spraying as we had no other way of doing it and decided to take our chances.

We lost three-fourths of the crop. The ground was literally covered with the sweet "Jenny Linds," which is the best variety for us to raise. But I think I saw that there is money in the crop if it is sold direct to local consumers.

Two years ago we raised cantaloupes for the first time and I was surprised to find that the people were simply "crazy" for good home-grown ones. So this year we have planned to put out at least an acre and then to spray them thoroly. The crop is almost a sure success because dry weather affects it less than most other intensively cultivated crops.—F. R. B[illegible]hore, Berks County, Pa.

Sceptic—"If you have such an infallible remedy for baldness, why don't you use it?"

Subtle Barber—Ah, sir, I sacrifice my appearance to bring 'ome to my clients the 'orror of 'airlessness.

Goodyear HEAVY DUTY Cord Tires, for passenger cars, buses and trucks, are available from Goodyear Dealers in the following sizes:

30 x 3½ (Cl.)　34 x 4½ (S. S.)
32 x 4 (S. S.)　30 x 5 "
33 x 4 "　33 x 5 "
32 x 4½ "　34 x 5 "
35 x 5 (S. S.)

For those who desire balloon tires Goodyear makes a complete line, including the HEAVY DUTY type in certain sizes.

ROUGH, hard going—that's where the new Goodyear HEAVY DUTY Cord Tire shines! It's *built* for that kind of work. The tougher, heavier carcass is made of SUPERTWIST; the thicker tread is a deep-cut full All-Weather; even the sturdy sidewalls are reinforced against rut-wear. If you drive a big car, or travel a punishing road, this is the tire for you. Costs a little more, but worth it by a long margin, in any service where extra stamina is desirable.

Kirby Poultry Farm

Taking Care of Poultry Manure

THE poultryman who also raises truck and fruit finds that the manure produced by the birds is at least a small factor in determining the profits. We find that dropping boards are the first aid in taking care of the manure. The roosts can be hinged over the dropping boards in sections. Then the roosting section can be raised and hooked to the ceiling where it will not interfere with cleaning the boards.

A short-handled metal scraper and a bushel basket are useful for cleaning the boards. The tools should be hung in the poultry house and only used for that purpose. Then they can always be found quickly and the cleaning work is less apt to be neglected.

Some poultrymen clean the dropping boards every day. This helps to keep the birds healthy and makes the houses look fine for the inspection of visitors. But because of the labor shortage some poultrymen have been cleaning the boards once each week and they find that it serves very well if the house is dry and well ventilated.

Use Matched Lumber for Boards

Poultry droppings become very offensive if they are in a house with a leaky roof. If the droppings are dry there will be little odor and little loss of fertility. Some breeders have used a pit beneath the roosts to hold the droppings. Because they are dry there is little fertility lost but the pit takes up floor space needed by the birds and is not considered quite as desirable as dropping boards.

The dropping boards should be made of smooth matched lumber carefully fitted together. This cuts down the number of cracks and crevices to a minimum. We have built the dropping platform of scrap lumber and then found that the extra work of scraping such boards more than made up for any saving in material. Rough scrap boards also complicate the work of keeping down mites and lice.

Poultry manure contains four or five times as much nitrogen as stable manure. That means it must be mixed with other elements for the best results in fruit growing. As all fertilizers have increased in value it is evident that more money can now be made or lost on the poultry manure than ever before.

Mixing with Commercial Fertilizers

The Massachusetts Station advises the following formula when poultry manure is mixed for use on corn; hen manure, 1510 pounds; acid phosphate, 340 pounds; muriate of potash, 150 pounds. This makes 2000 pounds of good fertilizer for corn and enables the poultryman to use the manure to the best advantage.

For strawberries the formula advised is 1000 pounds hen manure; 100 pounds of nitrate of soda; 100 pounds ammonium sulphate; 200 pounds high grade sulphate potash; 600 pounds acid phosphate. In orchard work the fruit trees can use hen manure to good advantage if mixed as follows: hen manure, 1500 pounds; high-grade sulphate potash, 170 pounds; 16 per cent acid phosphate, 330 pounds.

Should Be Stored in Dry Place

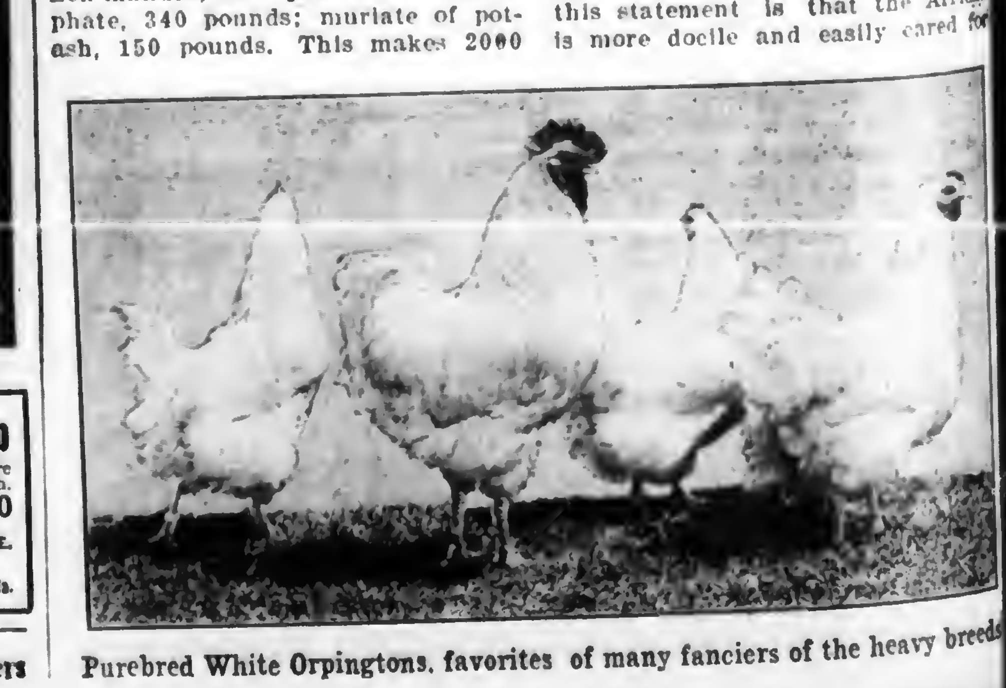
In all garden and fruit growing work we have found poultry manure too strong and rich in nitrogen for successful work. We once nearly ruined a patch of strawberries by top dressing too heavily with clear poultry manure. It stimulated a rank growth of grass and weeds that nearly crowded out the strawberry plants and the great increase in the richness of the soil did not bring any improvement in the quality or quantity of the strawberries. In fact the crop was seriously reduced.

To save the manure and properly mix it with other elements it is necessary to have a dry storage pit. Small quantities can be saved in barrels or large boxes placed in a dry shed. When collected from the boards the droppings can be sprinkled with acid phosphate and kainit to make the balanced mixture. After making a few weighings to determine the amount needed it is possible to make a fairly good estimate without the use of scales. The acid phosphate and kainit prevent the nitrogen from escaping.—R. G. Kirby.

Guineas for Profit

HERETOFORE the guinea hen has usually been considered a hobby, rather than a profit producer. Now, however, it is not difficult to see a change. This has come about thru the growing scarcity of game birds and the laws prohibiting their sale in many states, and the fact that the guinea is about the only thing that can take its place. In many ways the guinea is the nearest approach to wild game that has been as yet profitably produced on the farm. What the future may have in store in the line of pheasant and quail breeding we cannot say.

There are two leading varieties of guinea—the Pearl and the White African. The former is more common in most parts of the country but to my mind not so profitable to keep as the latter. My reason for this statement is that the African is more docile and easily cared for upon the farm, running with the hens, and even laying in the same nests.



Purebred White Orpingtons, favorites of many fanciers of the heavy breeds

The Pearl usually steals her nest in some secluded spot at a distance from the house, where she will lay a large number of eggs if not disturbed. It is even necessary to approach the nest with the utmost caution and the eggs should be removed with a long-handled spoon, leaving a few at all times that the bird may not suspect that she is being robbed. The eggs are smaller than those of the hen but they are equally good, being excellent for home use. The guinea lays from May to the latter part of August or later.

Best to Hatch Guineas at Home

It is not safe to attempt to start a flock of guineas by the purchase of mature birds. They are almost sure to fly away. A better way is to set the eggs under a good motherly hen. The eggs require from twenty-five to twenty-eight days to hatch. After the eggs have been setting for a week, add a few hen's eggs. The chicks will exert a good influence toward taming the young guineas.

It is well to confine the young birds for the first week of their lives, allowing no opportunity to escape. After a period with the hen, and a few chicks, they usually learn the ways of their foster-mother and give little trouble. When their feathers are grown to some extent, they become hardy and can take care of themselves. It is important that the mother hen be kept free from lice and vermin, as these parasites will kill the young birds.

Young guineas should be fed every two hours for a day or two. Dry bread makes a good first feed, or bread may be fed slightly moistened with milk. Lettuce or chopped onion tops should be given them as long as they remain in confinement. A little fresh meat is also excellent. When they get on the range they will pick up all the insects necessary for their diet.

Destroy Insects in Garden

The guinea does not scratch, so they may be allowed the freedom of the garden without fear of damage. Indeed they do more good than harm by eating the insects that infest the plants. Cracked corn is an excellent food for the growing birds. They will not eat much of it anyway.

A young guinea fowl is not exceeded in delicacy by the tenderest chicken, either broiled, roasted or fried. In fact, the gamy flavor of the guinea commends it to many as far superior to chicken. The older birds, also, are better when cooked, than an old hen. In the larger markets the guinea is much appreciated, while in the smaller markets it is becoming better known each year.—C. H. C.

Action of Wool Waste

There are two grades of wool waste for sale in this locality for $9.00 and $12.00 per ton, respectively, delivered. What is its action, such as time of availability, on crops such as early tomatoes, potatoes, melons, and advantages, if any, over new manure and old manure? Also what is the usual percentage of nitrogen and agricultural value in return for use?—T. W. D., Salem County, N. J.

Wool waste is a product which is quite variable in composition. It may contain two to ten per cent of nitrogen and one to three per cent of phosphoric acid. The composition is influenced by the amount of cotton and other foreign material present. The action of wool waste is quite slow since the nitrogen in it is not readily available. Hence, it should be used in relatively large amounts, which should be thoroly destroyed in the soil.

Where large applications are made, the low rate of availability is offset by the large quantity of nitrogen present, and crops are thus benefited in a very marked degree. Its effect on the poorer soil is particularly noticeable. Everything considered, the nitrogen in wool waste should be worth about eight cents a pound. Hence, the average lot of wool waste might be worth as much as $9.00 or $10.00 per ton.

Effects Noticeable on Poor Soil

Because of the low rate of availability of its ingredients, wool waste will show effects for several years if applied in large amounts. Moderate amounts of manure mixed with wool waste would add to its effectiveness, especially for crops like early tomatoes, potatoes and melons.—J. G. L.

Algae in Spring

I have a spring upon my premises which comes thru a fissure in the rock, and is enclosed in brick and stone, making a pool about ten feet long, five feet wide and three feet deep. It has an ample overflow so that the water is moving all the time. The water is very clear and cold. For the last year there has appeared upon the surface from time to time a greenish, mud color scum which seems to rise from some growth on the floor of the spring and on the walls. When skimmed off it returns persistently, but the flow is not sufficient to take it off the surface. There are goldfish in this pool. Can you tell me what causes this and if there is anything I can do to remedy it?—W. S. B., Essex County, N. J.

A study of methods for the elimination of algae in ponds, pools and reservoirs was made some years ago by the United States Department of Agriculture. The investigations of the department disclosed the fact that when a bag filled with copper sulphate is tied to the stern of any ordinary rowboat and when the boat is slowly rowed across the lake once or twice, enough copper sulphate will go into solution to kill the growth of algae without injuring the fish.

Try This Method

A similar method could be employed by you. It is suggested that you place in a small cloth bag about one-quarter of a pound of copper sulphate. Attach a string, sufficiently long for the purpose, to the bag and pull this across the pool once or twice. After enough copper sulphate will have been dissolved, the algae should turn brown and die within a few days.

If the treatment suggested is not successful, you might repeat the treatment and pull the bag thru the surface water of the pool three or four times. It is obvious that only a limited amount of copper sulphate should be allowed to dissolve. Otherwise, the goldfish in the pool would be injured.—J. G. L.

Not One But Many

THE slogan, "Plant a Tree and Watch It Grow," does not satisfy the members of the first boys' and girls' forestry club to be organized in Pennsylvania. Each of the fifteen members of the newly-formed Loyalsock Forestry Club, Sullivan County, have agreed to plant, not one tree but one-half acre of trees this year and another one-half acre next year. A definite program was adopted, and each member signed the agreement prepared in cooperation with the State Department of Forests and Waters and the extension service. Each of the plantings will be inspected at the round-up planned for September.—A. L. B.

How Many Chicks of Your First Hatch Are Living Today?

DICKINSON'S GLOBE POULTRY FEEDS
Egg Mash
Chick Starter
Growing Mash
Fattening Mash
Molting Mash
Chick Scratch
Growing Scratch
Poultry Scratch

ARE 95 out of a hundred living now? If not, for the sake of your future poultry profits, face the facts. Most chick deaths are preventable. An alarming percentage are caused by the *feeding mistakes* made by the raiser.

While you may not know what feeding mistakes you made that prevented you from raising 95 out of a hundred of your first hatch, you can prevent the repetition of those costly errors by adopting a tested and proved scientific feeding method that is vouched for by one of the world's largest makers of poultry feeds.

Follow This Tested Globe Method and Raise More Chicks

We have tested out many chick-raising methods during the last 22 years in our experimental poultry yards. The method described herein has proved itself to be by far the best. Its worth has been demonstrated by hundreds of poultry raisers in all parts of the country who regularly raise 90% to 95% of the chicks they hatch.

We unreservedly recommend this method to you. Following it is a short cut to bigger and surer poultry profits—to more chicks raised—to more broilers sold—to more well-developed pullets.

Prevents Feeding Mistakes

The Globe Chick-Raising Method, if followed exactly, prevents feeding mistakes. It furnishes the chicks with a food that approximates Nature's "chick food"—the yolk in the newly hatched chick—so that there is no strain on the chick's digestive organism during the change from yolk to prepared feeds. It insures chicks receiving the nutritive elements needed to build fat, feathers, bones, muscles. It insures that they will receive sufficient vitamines. It insures that chicks of the small poultry raiser will be as profitably fed as those of the most successful poultry raisers in the country. It is a method that spells PROFITS for all who follow it.

If you want to make no more chick-killing mistakes—
If you want to raise 90% to 95% of your chicks instead of 50%—
If you want to stop using haphazard mixtures—
If you want to give your chicks a FEEDING CHANCE to make you money—
Start using the Globe Chick-Raising Method without delay.

NOW ......is the time to start!

Adopt the Globe Chick-Raising Method today! If you have young chicks, ask your Globe merchant for Globe Chick Starter and Globe Chick Scratch. If your chicks are feathering, be sure to order Globe Growing Mash. Feathering chicks need a special feed. Globe Growing Mash is distinctive—rich in vitamines and the food elements making for sturdy frames, glossy plumage, and stamina.

We say "The Globe merchant is a good man to know"—because he realizes that your success must make his own—because he knows that results alone determine feed costs—because he stands for progressive "Dollar Value" merchandising and because of all this has tied up his personal business reputation with Globe Feeds—made [illegible]

Go to your Globe merchant today. Order the feeds you need. The path that leads to your Globe store is the path that leads to bigger Fall and Winter profits for you.

The ALBERT DICKINSON CO.
Chicago　Minneapolis

The GLOBE Chick Raising METHOD

For best and quickest results, we recommend that you follow this feeding program—

First 24 hours: Place a clean fount with tepid water before the chicks. Change water twice daily. GIVE THEM ABSOLUTELY NOTHING ELSE.

Second 24 hours: Place a little fine Charcoal and Grit on the litter—NO FOOD.

Third 24 hours: Feed dry Globe Chick Starter mixed with fine Charcoal and Grit three times during the day. Place it on a board and feed not more than they will eat in fifteen minutes.

4th to 10th days: Feed Globe Chick Starter in a chick hopper five times a day. In addition, scatter a little Globe Chick Scratch mornings and evenings in the litter to induce exercise.

10th day to 6th or 8th week: Leave the Globe Chick Starter before them in the hopper where they can have easy access to it all the time. From now on keep a box with fine Charcoal and Grit constantly before them. Increase the Globe Chick Scratch quantity as they grow and bury it in the litter, but not more in the morning than they clean up in thirty minutes. Make them work for it—exercise is essential to health and rapid growth. Late afternoon, feed a larger amount to carry them through the night with a full crop. At noon, furnish some juicy greenfeed. Grind it and mix some Globe Chick Starter with it to absorb the juice. Tomato juice is especially beneficial. Feed only such quantities as are quickly disposed of.

From the 6th to 8th through the 16th week: Change the Globe Growing Mash and Globe Growing Scratch, continuing the same routine adopted after the first ten days. Start the 8th week by feeding not more than one ounce of Scratch per bird per day, increasing the proportion gradually until you are feeding two ounces at 16 weeks.

At about twelve weeks the sexes should be separated and all males not desired for breeding and any other culls prepared for the market. The market usually desires from 1½ to 2 pound broilers early in the season and the chicks that have been culled, if put on the Globe Fattening Mash can be increased to the proper size in two weeks. Methods of feeding this Mash are described on page 45 in "Poultry Profits."

16th week and after: When the age of sixteen weeks has been reached we recommend changing the feed to Globe Egg Mash and Globe Poultry Scratch.

DICK'S Blizzard Ensilage Cutter

write for Catalog describing the Biggest Values in Ensilage Cutters

EACH model of Dick's Blizzard will do more work, using a given horsepower, than any other ensilage cutter of similar rating.

There are two moderate priced Blizzard outfits that do wonderful work, using Fordson power, at very low upkeep. Model R-211 illustrated above, equipped with efficient Paddle Roll Self-Feed, gives 6 to 9 tons per hour capacity. Model R-133 is a little larger and gives 8 to 12 tons per hour capacity. Five other Blizzard models operating on 3½ to 18 horsepower; giving capacity to 4 to 35 tons per hour, are described in our book; also "Famous" Feed Cutters for hand and power operation.

Write for Book Today Read how and why Blizzards are "Lightest running," "Do most work per H. P.," "Safest to operate," "Longest lasting," "Do finest work."

Head of the Department of Dairy Husbandry
Pennsylvania State College

Florham Ulna Does the Farm's Advertising

THE attention of the writer has recently been directed to a calendar for the year 1925, distributed by Wayside Farms, Boonton, N. J. the owner, E. H. Stickle, has reached his patrons in a personal way thru this calendar which is unique and well gotten up. On each page a picture tells a story that recalls three years of accomplishments on the part of Mr. Stickle's daughter, and of the community, Rockaway Valley.

The picture is of Miss Helen Stickle and her champion Guernsey, Florham Ulna 128591. Could anything more appropriate be used to illustrate a calendar distributed by a dairy farm retailing its own products? Follow the story of this pair and judge for yourself.

Interest in Calf Club Work Active

In the spring of 1922 the desire for a calf club in Rockaway Valley became active. Mr. Stickle and a group of other parents and prospective members wanted to know more about how such a thing would work out. Information was collected and all was set. Now it was necessary to purchase heifers.

A trip was made to Florham Farms, of which Joseph L. Hope of Guernsey fame is owner. Mr. Hope, in his modest way, had offered three heifers for calf club use at a price which meant a sacrifice of at least that many hundred dollars. The Rockaway Valley people were quick to see the opportunity thus opened to them, and before they had left Mr. Hope they had talked him into selling four. The one selected by Helen Stickle was probably the least desirable of the group.

The club prospered and grew and Helen went to work on her calf. The first year she annexed first prize in the club classes at the county and state fairs, as well as some high honors in the open classes.

In Spite of a Handicap

The second year the heifer had freshened too early, which showed her off at a disadvantage, but she again won two firsts as in the previous year. The championship had not yet come Florham Ulna's way, and Helen wanted it.

During the season just passed the heifer won the usual firsts and finally the championship in the club classes at the state fair, as well as some cups for fitting and general management.

But prizes are not all that make Florham Ulna a fit subject for the calendar. She had produced at the milk pail, even tho she has been carted over the state to fairs. During her first period, tho much younger than she would have been had she freshened normally, she produced 7641 pounds of milk and 457.95 pounds of butterfat.

Patrons Approve of Florham Ulna

Both of her calves have been bulls. Should the next one be a heifer it will mean much to the farm, not as a calf for sale, but because Wayside Farms will have another fine female to contribute to the future supply of milk.

The Stickle farm is visited by many patrons of the milk route. Florham Ulna has won the approval of all, and requests for her milk at a special price have been far too numerous to be filled. She represents something that the farm strives to do; excel in its products. And for this reason we believe that no picture could be more appropriate for use on the calendar distributed by Wayside Farms.

It would hardly be righ[illegible] praise this heifer without saying [illegible] word about Mr. Hope and his fo[illegible]ght in starting this sort of work a[illegible]g the people of his own county. His example has been a source [illegible]spiration to the owners of many [illegible]lf club animals in the state of N[illegible] Jersey. He has been a booster for [illegible] breed that means so much to him.—H S W.

Florham Ulna and her owner, Helen Stickle. The picture appeared on the calendar distributed by Wayside Farms, N. J.

She's a Champion

W. L. GLATFELTER, [illegible] Spring Grove, is the owner [illegible] Championess of Kenmanor 33[illegible], the mature Jersey that has ju[illegible] established a new record for Pen[illegible]sylvania Jerseys in the 305-day div[illegible].

In this test Championess produced 12246 pounds of milk an[illegible] 633.01 pounds of fat in the ten mo[illegible]ths. Her milk averaged 5.17 per cen[illegible] fat and she was with calf for m[illegible] than eight months of the test. Sh[illegible] qualified in Class AAA and [illegible] been awarded a gold medal by [illegible] American Jersey Cattle Club. [illegible]h her records she leads all Pen[illegible]sylvania Jerseys in the 305-day di[illegible]sion by a very comfortable margin.—J. C. C.

The Records Tell the Story

Two Ayrshires That Combine Type and Production

TWO beautiful Ayrshire cows, Penshurst Marian, presented to the Pennsylvania State College by Penshurst Farm, Narberth, and Sir Roberts Romona Bell, presented by the Masonic Homes, Elizabethtown, have recently completed yearly records that are outstanding for production in their respective age classes.

Penshurst Marian, by producing 14,620.9 pounds of milk and 639.4 pounds of butterfat in a year, wins the distinction of making the highest senior two-year Ayrshire record in the world for the year 1924. She thus wins the 1924 "French cup" awarded by the Ayrshire Breeders Association to the highest producer in each age class for the year. She also ranks as a silver medal cow since her record puts her among the ten highest cows of the breed in her age class. These are known as "Class Leaders."

Penshurst Marian.

Sir Roberts Romona Bell, as a junior two-year-old produced 12,848.9 pounds of milk and 539.9 pounds of butterfat. This was the highest junior two-year-old Ayrshire record made in 1924 thruout the world. She also wins the French cup in her age class for the past year.

The details of the record, according to P. D. Jones, the efficient herdsman who has general charge of the dairy cattle at the Pennsylvania State College, appear in the accompanying table.

Penshurst Marian, as shown by the data, averaged forty pounds of milk daily for the year during her first lactation period as a senior two-year-old, between two and one-half and three years of age. Her milk was sold mostly as "Grade A" and brought a return of $752.50. She ate an average of 14.4 pounds of grain feed daily, two pounds beet pulp, ten pounds hay, thirty-nine pounds silage and green corn, and seventeen pounds roots. Her total feed bill was 1247.27 and after paying for her feed she had left to her credit 1505.23.

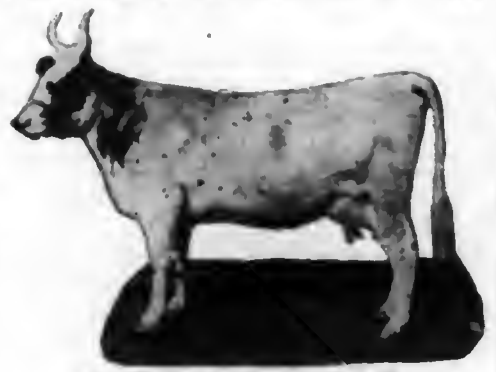
It Pays to Feed Well

Some dairymen would be horrified at the thought of feeding a cow as much as fourteen pounds of grain daily, as an average thruout the year, besides large amounts of hay, silage, and roots. On further inspection, we note, however, that this is but one pound of grain for every three pounds of milk, which accords well with good feeding practice. The big lesson is that with a good cow which can profitably turn feed into milk it pays to feed her well. A large milk yield is almost invariably accompanied by large consumption of feeds and a correspondingly large net return after the feed bills are paid.

Sir Roberts Romona Bell averaged thirty-five pounds of milk daily as a junior two-year-old, between two and two and one-half years of age. Her milk brought $627.98. She ate practically the same amount of feed as Penshurst Marian, except a lesser amount of roots. The total cost for her feed was $215.65 and after feed costs were deducted she had left $412.33 on the right side of the ledger.

Wins a First and a Second

Penshurst Marian was shown at the Eastern States Exposition, Springfield, Mass., during the past show season and won first place in the Junior Advanced Registry Class and second place in the open class as a three-year-old, shortly after completing her record. She was also shown as a two-year-old in 1923 while on test and making her silver medal record.



Sir Roberts Romona Bell.

Sir Roberts Romona Bell was also on the show circuit as a two-year-old during the season of 1923. At the Trenton State Fair, Trenton, N. J., she won second place in strong competition. Both cows combine to a marked extent type and production and are a real credit to their breeders, their owners and to the Ayrshire breed of cattle.—A. A. B.

Yearly Records of the Two Cows

	Penshurst Marian Sr. 2 yr. old	Sir Roberts Romona Bell Jr. 2 yr. old
Pounds milk during year	14,620.9	12,848.9
Pounds butterfat during year	639.4	539.9
Value of product	$752.50	$627.98
Pounds grain fed	5263	5270.4
Pounds silage	9418	8149
Pounds green corn	3777	4071
Pounds alfalfa hay	2374	2040
Pounds mixed hay	1139	943
Pounds molasses	387	387
Pounds beet pulp	819	922
Pounds roots	6338	910

Cost of grain	120.73	110.43
Total cost of feed	247.27	215.65
Value of product over cost of feed	505.23	412.33

Pastures Pay

SUCCESSFUL hog men in Pennsylvania have found that to make pork production profitable it pays to have pastures.

Pasture demonstrations carried on by the agricultural extension department of the Pennsylvania State College in all sections of the state indicate that pigs on pasture require 133 pounds less feed to produce 100 pounds gain than is required by pigs fed in dry lots.

Easy as One-Two-Three

1. See a De Laval its Superiority is Evident
2. Try Let it prove how much cream it will Save
3. Trade in your old separator as Partial Payment

Hand
Electric
Belt

7 Sizes

OF course everyone who buys a cream separator wants the best; no one would deliberately buy a separator which would not skim clean or one which would skim clean for but a short time.

If there is any question in your mind about which cream separator is the best, it is an easy thing to settle. Just compare a De Laval side-by-side with any other machine you may have in mind. That is enough for most people—the superiority of the De Laval is clearly apparent.

But if merely seeing does not satisfy you, go a step farther and try them in actual use. *Not one person out of a hundred who does this ever fails to choose the De Laval.*

After you have convinced yourself that the De Laval is the best, and you know how much more cream it will save, trade in your old separator as partial payment on a new De Laval. See your De Laval Agent or write our nearest office below.

"Z" ENGINES are Quality-Built Through and Through

WHEN we say that the "Z" Engine is one of the finest built small stationary engines on the market, we are basing our statement on actual facts. If we could take you through our huge modern plant and let you see for yourself the extremely careful workmanship that is put into these engines you would realize that every part is built as carefully as the parts in your automobile. No slipshod methods are permitted. Working parts must fit to within a fraction of the diameter of a hair. The "Z" Engine has fewer parts subject to wear and those parts are carefully made—are drop forged and are specially heat-treated.

All this means longer life, more power and freedom from trouble, as over 400,000 users will gladly tell you. Every "Z" Engine delivers its full rated power—and it will do it year-in and year-out without "time off." Your money goes further when invested in a "Z."

Ask the local Fairbanks-Morse *authorized* dealer to show you a "Z" Engine. Compare it part for part and you note at once its greatly superior quality.

Hog Production and Prices Move in Recurring Cycles

HOG raising in the United States is dominated by a tendency to fall into a vicious circle of successive over-and-under production, normally running two years from one extreme to the other. If these ups and downs are to be eliminated, hog breeding must be based on a sounder view of probable future conditions than can be obtained merely from the memory of past profits.

So say economists of the Department of Agriculture who have investigated fluctuations in hog production for nearly forty years.

The close connection between corn prices and hog production is due, of course, to the fact that about eighty-five per cent of the corn crop is consumed by livestock. It is the principal element in the cost of producing hogs. Altogether about forty per cent of the total corn crop is consumed by hogs.

Should Study Conditions

It has been found that hog breeding reaches its maximum from half a year to a year after hog prices touch their peak in relation to corn prices, and begin to decline. This belated action by the breeders produces a surplus of hogs a year or more later, by which time the hog-corn ratio is usually at or near its low point. On the other hand, breeding does not reach its low point until some time after the hog-corn price ratio has begun to rise again. There is, consequently, a swing to underproduction. Any cause leading to unusual profits or losses sets up oscillations in the number of hogs running about four years from crest to crest.

Apparently the price which the packers pay for hogs during a given season does not depend wholly on the actual supply offered. It is influenced to a greater extent by current and prospective conditions in the country as a whole, as indicated by the amount of breeding that has been done and by recent and current tendencies in corn prices.

The Department's investigators were struck with the fact that during the period studied the summer live weight of hogs marketed gave a remarkably close indication of the amount of breeding for the next year or more. Knowledge of the summer weight of hogs could thus have afforded a means of predicting pork production and winter slaughtering, the other factors also being considered. Winter live weight, on the other hand, was determined largely by the preceding corn crop, and only secondarily by the amount of breeding done the preceding year.

Here is the way the Department summarizes its study of the effect of the hog-corn ratio on future hog prices. Seasonal slaughter is determined in part by the amount of breeding during at least three years past, and in part by tendencies toward concentration in the summer season in which prices are high, at the expense of the winter season, whenever the corn supply permits this to be done. This is why the corn crop has its maximum effect on hog slaughter in the summer after it was raised. There is a second peak of slaughter in the third following winter, due to the stimulus to breeding.

It is noted that while the farm price of hogs is very closely related with the packer's price it lags behind the packer's price several months.—M. B. D.

Breeders Loyal to Boar Ass'n

ONE of the chief obstacles which hampers the efforts of the average Pennsylvania farmer in his efforts to produce good hogs is the question of securing the services of a high-class purebred boar. Usually he keeps two or three sows and for that small a number it is not profitable for him to keep a boar. Too often this results in the use of a sire that is inferior in every respect which causes a decided lowering of the producing efficiency of the farm brood sows.

The Pennsylvania farmer has found a way to get around this difficulty by organizing boar associations. A group of farmers in a community get together, decide on the breed and arrange for the purchase and ownership of a community boar. Each man has as many shares in the association as he has brood sows. The boar is kept by one of the members and the feed bill is prorated according to the number of sows bred.

The First Association Formed

The first association was organized in Northumberland County in 1918. At that time the Plum Creek community organized, decided on the Duroc-Jersey breed, and have been going ever since. Since then over 100 such associations have been organized thruout the state and they have been instrumental in improving the quality of the pork produced by the average farmer.

An example of the successful operation of one of these organizations is the Augustaville Berkshire Association located in Northumberland County. The members own a very excellent Berkshire boar which has given splendid litters of typey Berkshire pigs.

At the annual meeting of the Augustaville association, held on April 4, 1925, when the accounts for the year were paid, the treasurer's report audited, and new officers elected, the association was found to be in splendid condition. Despite the depression, members were still strong for the association and a total of thirty-three sows were reported bred during the year 1924-1925. There are twelve members and every member used the boar. The cost of keeping the boar for the year totaled $50.61 which made an average service fee of approximately $1.[illegible] per sow.

The following officers were elected: President, Daniel Eyster; vice president, D. C. Long; secretary, Ira Renn; treasurer, H. M. Foye; advisory committee, Henry Eyster, F. B. Foye, Jesse Dunkelberger.—K

"Are you sure you have shown me all the principal parts of the car?" asked the fair prospective purchaser.

"Yes, madam, all the main ones," replied the dealer.

"Well, then, where is the depreciation? Tom told me that was one of the biggest things about a car."—The Argonaut, San Francisco.

Questions on Soils and Crops

Answered by J. G. LIPMAN

Staff Contributor and Adviser

Would you kindly inform me whether buckwheat is injurious to fruit trees? There seems to be an idea in these parts that it is. I thought of planting it for a cover crop, as I am now plowing.—R. E. B., Perry County, Pa.

It has been claimed that there is such a thing as incompatibility among plants of different species. For instance, in some experiments carried out in England it has been claimed that grass will not grow under certain trees because of the poisonous excretions from the roots of those trees. Similar claims concerning other plants are found in the work of American and European investigators. It is possible, therefore, that there may be injury caused to fruit trees by the root excretions of buckwheat.

May Cause Other Damage, Too

On the other hand, we know that damage by buckwheat, rye, wheat, etc., in fruit orchards may be done not by root excretions but by the taking up of available plantfood by these crops, thus depriving the trees both of plantfood and of moisture. Moreover, when rank growth of rye or buckwheat is turned under in a fruit orchard, the trees may be damaged because of the bacterial activity encouraged by the buckwheat or rye turned under and the use by these bacteria of the soluble nitrates in the soil.

For practical purposes, damage may be avoided by plowing under such crops while they are still tender. If they are to be used as green manures or if buckwheat is to be used as a cash crop, it would be desirable to allow enough free space for the trees in order that the buckwheat plants would not deprive the latter of too much moisture and soluble plantfood.—J. G. L.

What's It Worth?

A fertilizer company offers basic lime phosphate, guaranteeing thirteen per cent phosphoric acid and thirty per cent lime. Is this lime worth, in round numbers, three-fifths as much per ton as ground limestone for correcting soil acidity? If this material were mixed with nitrate of soda or sulphate of ammonia, would the lime have any bad effect on the mixture?—H. C., Monmouth County, N. J.

Since ordinary ground limestone is usually sold on the basis of fifty per cent actual lime, the basic lime phosphate referred to would be equal to three-fifths of an equivalent weight of ground limestone. It should be as efficient when used in equivalent amounts for correcting soil acidity.

There is no objection to mixing basic lime phosphate or ground limestone with nitrate of soda. On the other hand there is a decided objection against the mixing of lime with sulphate of ammonia or other ammonia salts, since in such mixtures free ammonia is given off, especially when the material is somewhat moist. If sulphate of ammonia is to be used with ground limestone or basic lime phosphate, it would be best to mix the material immediately before application. After the material is thoroly worked into the soil, the ammonia which might be set free would not escape into the air.—J. G. L.

Fertilization of Asparagus

THE asparagus crop, occupying as it does the land continuously, makes exacting demands upon it. The plants themselves are subject to exhaustive treatment, since the cutting continues from early spring until well into the summer. For this reason methods of fertilization involve the use not only of large quantities of plant food, but also of readily available plant food. Most of the progressive growers are not content with applying fertilizer in the spring alone, but also use additional quantities of fertilizer when the cutting season is at an end.

Prior to 1914 many asparagus growers used 1000 to 1500 pounds per acre of a fertilizer mixture containing four per cent of nitrogen, eight per cent of phosphoric acid and ten per cent of potash. Not a few growers used even larger amounts, some of them a combination of manure and commercial fertilizers.

Less Potash Used Now

The temporary shrinkage in the supply of potash during the war years has led to the use of fertilizer mixtures containing smaller amounts of potash. Within the past two or three years mixtures containing four per cent of ammonia, eight per cent of phosphoric acid and seven per cent of potash have been used extensively. Some growers prefer 4-8-5 mixtures, while some employ material containing five per cent of ammonia, eight per cent of phosphoric acid and seven per cent of potash.

On the whole, therefore, the differences in the composition of the mixed fertilizer used in asparagus growing are not great. It is also the custom to use nitrate of soda as well as the mixed fertilizer. The more common practice, however, is to apply the mixed fertilizer before cutting begins in the spring. After cutting is over, about the end of June or early in July, nitrate of soda is applied at the rate of 200 to 400 pounds per acre. Not infrequently two or three smaller applications rather than one large application are made.

For instance, 150 pounds of nitrate of soda per acre may be applied immediately after the cutting is over and 150 pounds more about a month later. This is done to encourage the rapid and vigorous development of the tops and the accumulation of reserve food in the roots.

Four Applications

Some growers use nitrate of soda at the beginning as well as at the end of the cutting season, at times as much as 500 to 600 pounds per acre. In that case 150 pounds may be supplied early in the spring, 150 pounds more when cutting is about half done. A third application of 150 pounds per acre is made at the end of the cutting season and a fourth application of a like amount about a month later

In some sections of New Jersey crops like cow peas, and soy beans are grown between the rows. Many successful asparagus growers in the vicinity of Middletown, N. J., have been using leguminous cover crops for a long time with marked success. The question has arisen, however, whether in the long run the practice is satisfactory in view of complications in the matter of tillage, moisture supply, etc.

Everything considered, there is evident agreement among progressive growers as to the need of lib-

(Continued on page 30)

NEXT WEEK
Put in a New Set of Champions

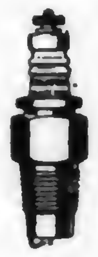
We make Champion Spark Plugs the very best we possibly can. Champions are so good today that we would be fully justified, and entirely truthful, if we should advertise them as everlasting.

But, we would be doing the motorist an injustice if we did not advise him to change his spark plugs at least once each year.

For the car owner would suffer a distinct loss by using even Champion Spark Plugs for more than 8,000 miles.

Next week, more than 95,000 equipment dealers will assist the swing toward greater economy with a special Champion Spark Plug week.

Begin now, with a new set of Champions, to give your engine a real chance to deliver its full power, pick-up and efficiency. With a new set of Champions, you see all the difference in the world.



Champion X is the standard spark plug for Ford Cars and Trucks and Fordson Tractors.

The seven Champion types provide a correctly designed spark plug for every engine. Champion X for Fords is 60 cents. Blue Box for all other cars, 75 cents. (Canadian prices 80 and 90 cents). Champions are fully guaranteed.

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

MY LIFE went on with little in it worth recording until the letter came. I speak of it as "the letter," because of its effect upon my career. It was from Sally, and it said:

"Dear Bart—It's all over for a long time, perhaps forever—that will depend on you. I shall be true to you, if you really love me, even if I have to wait many, many years. Mother and father saw and read your letter. They say we are too young to be thinking about love and that we have got to stop it. How can I stop it? I guess I would have to stop living. But we shall have to depend upon our memories now. I hope that yours is as good as mine. Father says no more letters without his permission, and he stamped his foot so hard that I think he must have made a dent in the floor. Talk about slavery—what do you think of that? Mother says that we must wait—that it would make father a great deal of trouble if it were known that I allowed you to write. I guess the soul of old Grimshaw is still following you. Well, we must stretch out that lovely day as far as we can. Its words and its sunshine are always in my heart. I am risking the salvation of my soul in writing this. But I'd rather burn forever than not tell you how happy your letter made me, dear Bart. It is that Grimshaw trouble that is keeping us apart. On the third of June, 1844, we shall both be twenty-one—and I suppose that we can do as we please then. The day is a long way off, but I will agree to meet you that day at eleven in the morning under the old pine on the river where I met you that day and you told me that you loved me. If either or both should die our souls will know where to find each other. If you will solemnly promise, write these words and only these to my mother—Amour omnia vincit, but do not sign your name.

"SALLY."

What a serious matter it seemed to me then! I remember that it gave Time a rather slow foot. I wrote the words very neatly and plainly on a sheet of paper and mailed it to Mrs. Dunkelberg. I wondered if Sally would stand firm and longed to know the secrets of the future. More than ever I was resolved to be the principal witness in some great matter, as my friend in Ashery Lane had put it.

I was eight months with Wright and Baldwin when I was offered a clerkship in the office of Judge Westbrook, at Cobleskill, in Schoharie County, at two hundred a year and my board. I knew not then just how the offer had come, but knew that the Senator must have recommended me. I know now that he wanted a reliable witness of the rent troubles which were growing acute in Schoharie, Delaware and Columbia Counties.

It was a trial to go so far from home, as Aunt Deel put it, but both my aunt and uncle agreed that it was "for the best."

"Mr. Purvis" had come to work for my uncle. In the midst of my preparations the man of gristle decided that he would like to go with me and see the world and try his fortune in another part of the country.

How it wrung my heart, when Mr. Purvis and I got into the stage at Canton, to see my aunt and uncle standing by the front wheel looking up at me. How old and lonely and forlorn they looked! Aunt Deel had her purse in her hand. I remember how she took a dollar bill out of it—I suppose it was the only dollar she had—and looked at it a moment and then handed it up to me.

"You better take it," she said. "I'm 'fraid you won't have enough."

How her hands and lips trembled! I have always kept that dollar.

I couldn't see them as we drove away.

I enjoyed the ride and the taverns and the talk of the passengers and the steamboat journey thru the two lakes and down the river, but behind it all was a dark background. The shadows of my beloved friends fell every day upon my joys. However, I would be nearer Sally. It was a comfort when we were in Albany to reflect that she was somewhere in that noisy, bewildering spread of streets and buildings. I walked a few blocks from the landing, taking careful note of my way — mentally blazing a trail for fear of getting lost—and looked wistfully up a long street. There were many people, but no Sally.

THE judge received me kindly and gave Purvis a job in his garden. I was able to take his dictation in sound-hand and spent most of my time in taking down contracts and correspondence and drafting them into proper form, which I had the knack of doing rather neatly. I was impressed by the immensity of certain towns in the neighborhood, and there were some temptations in my way. Many people, and especially the prominent men, indulged in ardent spirits.

One of my young friends induced me to go to dinner with him at Van Brocklin's, the fashionable restaurant of a near city. We had a bottle of wine and some adventures and I was sick for a week after it. Every day of that week I attended a convention of my ancestors and received much good advice. Toward the end of it my friend came to see me.

"There's no use of my trying to be a gentleman," I said. "I fear that another effort would hang my pelt on the door. It's a disgrace, probably, but I've got to be good. I'm driven to it."

"The way I look at it is this," said he. "We're young fellows and making a good deal of money and we can't tell when we'll die and leave a lot that we'll never get any good of."

IT WAS a down-country, aristocratic view of the responsibilities of youth and quite new to me. Caligula was worried in a like manner, I believe. We had near us there a little section of the old world which was trying, in a half-hearted fashion, to maintain itself in the midst of democracy. It was the manorial life of the patroons—a relic of ancient feudalism which had its beginning in 1629, when The West Indies Company issued its charter of Privileges and Exemptions. That charter offered to any member of the company who should, within four years, bring fifty adults to the New Netherlands and establish them along the Hudson, a liberal grant of land, to be called a manor, of which the owner or patroon should be full proprietor and chief magistrate. The settlers were to be exempt from taxation for ten years, but under bond to stay in one place and develop it. In the beginning the patroon built houses and barns and furnished cattle, seed and tools. The tenants for themselves and their heirs agreed to pay him a fixed rent forever in stock and produce and, further, to grind at the owner's mill and neither to hunt nor fish.

Judge Westbrook, in whose office I worked, was counsel and collector for the patroons, notably for the manors of Livingston and Van Rensselaer—two little kingdoms in the heart of the great republic.

I spent two years at my work and studied in the office of the learned judge with an ever-present but diminishing sense of homesickness. I belonged to the bowling and athletic club and had many friends.

Mr. Louis Latour, of Jefferson County, whom I had met in the company of Mr. Dunkelberg, came during my last year there to study law in the office of the judge, a privilege for which he was indebted to the influence of Senator Wright, I understood. He was a gay Lothario, always boasting of his love affairs, and I had little to do with him.

One day in May near the end of my two years in Cobleskill Judge Westbrook gave me two writs to serve on settlers in the neighborhood of Baldwin Heights for non-payment of rent. He told me what I knew, that there was bitter feeling against the patroons in that vicinity and that I might encounter opposition to the service of the writs. If so I was not to press the matter, but bring them back and he would give them to the sheriff.

"I do not insist on your taking this task upon you," he added. "I want a man of tact to go and talk w these people and get their point view. If you don't care to und take it I'll send another man."

"I think I would enjoy the tas I said in ignorance of that horne nest back in the hills.

"Take Purvis with you," he s "He can take care of the horses, a as those back-country folk are a l tle lawless it will be just as well have a witness with you. They t me that Purvis is a man of ne and vigor."

Thus very deftly and with alarming me he had given me a tion of the delicate nature of task. He had great faith in me th days. Well, I had had remarkab good luck with every matter he h put into my hands. He used to that I would make a diplomat a playfully called me "Lord Chest field"—perhaps because I had unc sciously acquired a dignity a courtesy of manner beyond my ye a little.

"Mr. Purvis" had been busy buil ing up a conversational reputati for frightfulness in the gardens. was held in awe by a number of simple-minded men with whom worked. For him life had gro very pleasant again—a sweet, un terrupted dream of physical pow and fleeing enemies. I tremble think what might have happened his strength and courage had equal his ambition. I smiled when judge spoke of his nerve and vig Still I was glad of his company, fo enjoyed Purvis.

I HAD drafted my letters for day and was about to close desk and start on my journey w Louis Latour came in and annou that he had brought the writs fr the judge and was going with m

"You will need a sheriff's dep anyhow, and I have been appoin for just this kind of work," he sured me.

"I don't object to your going you must remember that I am in co mand," I said, a little taken ba for I had no good opinion either his prudence or his company.

He was four years older than I I had better judgment, poor as was, and our chief knew it.

"The judge told me that I could but that I should be under your ders," he answered. "I'm not go to be a fool. I'm trying to estab a reputation for good sense mys

We got our dinners and set soon after one o'clock. Louis wo green velvet riding coat and ha some top boots and snug-fitting trousers. He was a gallant figure the high-headed chestnut which his father had sent to Purvis and I, in our working were like a pair of orderlies foll ing a general. We rode two of best saddle horses in the jud stable and there were no better that region.

I had read the deeds of the we were to visit. They were br ers and lived on adjoining fa with leases which covered three h dred and fifty acres of land. T

eat-grandfather had agreed to pay yearly rent forever of sixty-two shels of good, sweet, merchantble, winter wheat, eight yearling ttle and four sheep in good flesh d sixteen fat hens, all to be delivd in the city of Albany on the t day of January of each year. So ling that I was engaged in a just se, I bravely determined to serve writs if possible.

T WAS a nice ride up into the highlands thru woods just turning green. Full flowing noisy brooks the road here and there on their y to the great river. Latour rode ng beside me for a few miles and n to tell of his sentimental adtures and conquests. His talk wed that he had the heart of a e. It made me hate him and the re because he had told of meeting Sally on the street in Albany that he was in love with her. It while he was telling me how he once fooled a country girl that I ked. He thought it a fine joke. his father had cut his allowance hundred a year so that the sum had had to pay in damages had his nose "on the grindstone" for year. Then I stopped my horse h an exclamation which would e astonished Lord Chesterfield, I sure.

The young fellow drew rein and ked.

"What's the matter?"

"Only this. I shall have to try to k you before we go on any fur."

"How's that?"

I dismounted and tightened the h of my saddle. My spirit was ing swift counsel with itself at e brink of the precipice. It was n that I seemed to see the angry e of old Kate—the Silent Woman t my elbow, and it counseled me speak out. Again her spirit was leading me. Calmly and slowly these words came from my lips:

"Because I think you are a low-lived, dirty-souled dog of a man and if you stand that without fighting you are a coward to boot."

This was not the language of diplomacy but at the time it seemed to me rather kind and flattering.

Latour flashed red and jumped off his horse and struck at me with his crop. I caught it in my hand and said:

"Hold on. Let's proceed decently and in order. Purvis, you hold these horses while we fight it out."

Purvis caught Latour's horse and brought the others close to mine and gathered the reins in his hand. I shall never forget how pale he looked and how fast he was breathing and how his hands trembled.

I JUMPED off and ran for my man. He faced me bravely. I landed a stunning blow squarely on his nose and he fell to the ground. Long before, Hacket had told me that a swift attack was half the battle and I have found it so more than once, for I have never been slow to fight for a woman's honor or a friend's or my own—never, thank God! Latour lay so quietly for a moment that I was frightened. His face was covered with blood. He came to and I helped him up and he rushed at me like a tiger. I remember that we had a long round then with our fists. I knew how to take care of my face and stomach and that I did while he wore himself out in wild blows and desperate lunges.

We had dismounted near the end of a bridge. He fought me to the middle of it and when his speed slackened I took the offensive and with such energy that he clinched. I threw him on the planks and we went down together, he under me, in a fall so violent that it shook the bridge and knocked the breath out of him. This seemed to convince Latour that I was his master. His distress passed quickly and he got up and began brushing the dust from his pretty riding coat and trousers. I saw that he was winded and in no condition to resume the contest.

I felt as fresh as if I had mowed only once around the field, to quote a saying of my uncle.

"We'll have to fight it out some other day," he said. "I'm weak from the loss of blood. My nose feels as if it was turned wrong side out."

"It ought to be used to the grindstone after two years of practise," I remarked. "Come down to the brook and let me wash the blood off you."

Without a word he followed me and I washed his face as gently as I could and did my best to clean his shirt and waistcoat with my handkerchief. His nose was badly swollen.

"Latour, women have been good to me," I said. "I've been taught to think that a man who treats them badly is the basest of all men. I can't help it. The feeling has gone into my bones. I'll fight you as often as I hear you talk as you did."

He reeled with weakness as he started toward his horse. I helped him into the saddle.

"I guess I'm not as bad as I talk," he remarked.

If it were so he must have revised his view of that distinction which he had been lying to achieve. It was a curious type of vanity quite new to me then.

YOUNG Mr. Latour fell behind me as we rode on. The silence was broken presently by "Mr. Purvis," who said:

"You can hit like the hind leg of a horse. I never see more speed an' gristle in a feller o' your age."

"Nobody could swing the scythe and the ax as much as I have without getting some gristle, and the schoolmaster taught me how to use it," I answered. "But there's one thing that no man ought to be conceited about."

"What's that?"

"His own gristle. I remember Mr. Hacket told me that the worst kind of a fool was the man who was conceited over his fighting power and liked to talk about it. If I ever get that way I hope that I shall have it licked out of me."

"I never get conceited—not that I ain't some reason to be," said Purvis with a highly serious countenance. He seemed to have been blind to that disparity between his acts and sayings which had distinguished him in Lickitysplit.

I turned my head away to hide my smiles and we rode on in silence.

"I guess I've got somethin' here that cocollated to please ye," he said.

He took a letter from his pocket and gave it to me. My heart beat faster when I observed that the superscription on the envelope was in Sally's handwriting. The letter which bore neither signature nor date line, contained these words:

"Will you please show this to Mr. Barton Baynes? I hope it will convince him that there is one who still thinks of the days of the past and of the days that are coming—especially one day."

Tears dimmed my eyes as I read and re-read the message. More than two of those four years had passed and, as the weeks had dragged along I had thought more and more of Sally and the day that was coming. I had bought a suit of evening clothes and learned to dance and gone out to parties and met many beautiful young ladies but none of them had the charm of Sally. The memory of youth—true-hearted, romantic, wonder working youth—had enthroned her in its golden castle and was defending her against the present commonplace herd of mere human beings. No one of them had played with me in the old garden.

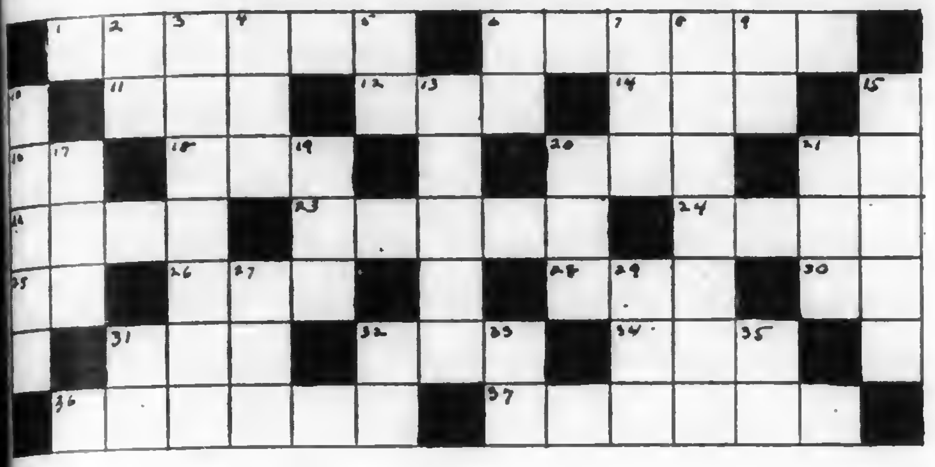
Our Weekly Cross Word Puzzle



TO SOLVE this puzzle, fill the white squares with letters forming the words defined in the list below. For example: 31 (across) is U T E and 35 (down) is A S T E R. You may begin anywhere in the Puzzle. Follow the definitions carefully, and, by noting letters common to two words, you will soon have a clew to help you. The solution of this puzzle will appear in an early issue.

READING ACROSS

1. An excessive strain of the muscles
6. The horn of a stag

Our Young People's Forum

Cousin Ruth's Letter

Dear Forum Friends:—For years and years on the first of May, men and women and children have given a reception to the month of flowers. They have celebrated with outdoor festivals the brilliant array of gayly colored blossoms.

It isn't often that I've been able to take part in any grand celebration planned to greet the flowers, but just the same I have a celebration all to myself every spring. How can I help it when gay yellow dandelions shine in the sun and groups of modest gray pussy paws cluster together out in the lawn; when the tulips lift their many-colored cups to catch the rain; when the orchard trees are huge bunches of bloom, white and pink and green; when the little leaves poke thru and make the woods look like green feather dusters?

How many of you have already planted gardens of your own? Surely there isn't one of you who wants to be without his or her flower or vegetable garden this summer. Some of you must remember how Bart, in "The Light in the Clearing," carefully tended his watermelon vine and impatiently waited for the day when he could pick the melon. Later in the summer I'm going to ask you to write me about your gardens. Let's see who will have the finest then.

The Contest letters are coming in fast. If you haven't sent yours get it off in a hurry so it will reach me on time. Address it to: Cousin Ruth, 261 S. Third St., Philadelphia, Pa.

COUSIN RUTH.

From Forum Friends

Dear Cousin Ruth and Forum Friends:—This is my third letter to the Forum. My second wasn't published. But I did as the violinist. I live in the country but would rather live in the city.

For pets I have two dogs. Their names are Molly and Rex. My niece and cousins will come to see me this summer. May they also join the Forum? I am sure they will want to write.—Lucille Snyder, Schuylkill County, Pa.

Dear Cousin Ruth and Forum Friends:—I am fourteen years old but do not go to school. I have two sisters and five brothers. For pets I have three cats and a chicken; the cats' names are Fatty, Nigger and Lady. My chicken's name is Stubby. She hasn't any toes.

I will be glad when summer comes. I like to make hay. I always drive the horses and rake. Well, I think I will stop and give some one else a chance.—Ona Watson, Wayne County, Pa.

THE GOOD OLD SUMMERTIME
Dorothy Vogel, Monmouth County, N. J.

Dear Cousin Ruth:—I am thirteen years old and am in the ninth grade. I have five brothers and no sisters. I am the youngest. I live in the country and have a dog and cat for pets. We also have a horse and two hogs. We have a twenty-four-acre farm planted in all kinds of berries.

I have a recipe for fudge:

3 ounces of bitter chocolate
1 cup of cream
1 pinch of salt
3 cups of sugar

Boil these together until it forms a hard ball in cold water, then put the pan in cold water for seven minutes.

After it is taken out of the water put a tablespoon of butter, a teaspoonful of vanilla, and a tablespoon of marshmallow whip. Then whip the mixture together as it needs more whipping than any other fudge. Put it in butter dishes and let it stay until it is cold.—Katherine Jacobs, Atlantic County, N. J.

Dear Cousin Ruth:—I am eleven years of age and am in the seventh grade at school. My father takes us. I have four sisters and four brothers. We have cows, horses, chickens, geese, ducks and one dog. His name is Jack. We had another dog but the trolley ran over him. His name was Rover.

Cousin Ruth, how are you feeling now? We are having our Easter vacation now. Next time I will tell you of my trip to New York.—Catherine Denow, Mercer County, N. J.

I'm feeling a lot better now, thank you. I'll just have to feel fine now that spring is here, won't I?

Dear Cousin Ruth and Forum Friends:—I have been a reader of the Y. P. F. for some time and I enjoy it so much I decided I would write. I am eleven and in the sixth grade.

For pets I have four cats and two dogs. The cats' names are Tootsie, Buttercup, Whiskers and Twister. The dogs' names are Mage and Puppy. We have taught the pets many tricks.

I am the youngest of the family and attend the Rock Lake School with my sister, Minnie, who is thirteen years old.

Cousin Ruth, may I send some pictures that I wish to have published on the Y. P. F. Page?—Edythe Delma Rhude, Wayne County, Pa.

Yes, do send them. I hope they are clear so that they will reproduce nicely on our page.

Answers to riddles contributed by Ruth Stuckey:

1. Because it is fur (far) to the end.
2. His feet.

* * *

Answers to riddles contributed by Marjorie Waibrel:

1. A bed.
2. When the nail is on one's finger.
3. A watch.
4. They nearly always have the grip.

Dear Cousin Ruth:—Do you have room for a little boy five years old? Of course, I can not write yet, but mamma always reads me the Forum letters so she will write it for me. I live on a farm of 120 acres, five miles from Bloomsburg. I have one little sister three years old; her name is Lorene.

We have four horses; their names are Pet, Doll, Prince and Fred. Today I was riding Prince to water and he jumped and threw me off in the road, but I was not hurt. We have two dogs. Gyp is daddy's hunting dog and Bounce is a Collie and chases the cows.

Tonight the Easter Bunny is coming and I can hardly wait to see what he brings me. I hope he brings Cousin Ruth a lovely basket of good things.—Earl Snyder, Columbia County, Pa.

Indeed, there is plenty of room for you tho you are only five years old. Your letter is very interesting; I enjoyed reading it.

Dear Cousin Ruth:—I live on a farm near Saegerstown. I am thirteen years old and am in the sixth grade. I have gone two years without missing a day or being late. I think the Forum page is the best page in Pennsylvania Farmer. Don't you?

I have a dog named Curley and two cats. We have three horses and eleven cows.—Mable May Peterson, Crawford County, Pa.

APRIL SHOWERS
Thelma F. Miller, Franklin County, Pa.

Dear Forum Friends:—I haven't been with you since last summer when the puzzle editor printed my letter while Cousin Ruth was on her vacation. I enjoy reading the Forum letters and Cousin Ruth's, too.

Before, when I wrote, I said I would send a recipe. Here's one:

THREE-EGG ANGEL FOOD CAKE

1 cup sugar
1 1-3 cups flour
¼ teaspoon cream of tartar
3 teaspoons baking powder
1-3 teaspoon salt
2-3 cup scalded milk
1 teaspoon almond or vanilla extract
Whites of 3 eggs

Mix and sift first five ingredients four times. Add the other things and bake in moderate oven forty-five minutes.

Some other time I will send another recipe if Cousin Ruth will let me.

I am in the seventh grade school. Our school closes May 5 I am glad the time is so near. thirteenth birthday is April 29. any of my Forum friends have bir days on that day?—Veora Christ Susquehanna County, Pa.

Dear Cousin Ruth and Fo Friends:—I have just started school this winter and learned read so well that I can now read t Forum page and enjoy it so mu that I thought I would write a li letter.

I am seven years old and am in second grade. I go to Cedar Gr School.

I have two brothers and th sisters. A brook runs close by house and my little three-year sister, Mary, and I, have fun wadi in the summertime. For pets I h four cats and three little kittens Esther S. Brook, Juniata County,

Dear Cousin Ruth and Fo Friends:—I was thirteen on Feb ary 22 and am in the seventh g at school. I was in a pig club in year 1923-1924. I had the next la est pig when we started to feed had the best when done. We hauled to school in a bus by father again this winter, but now are hauled in a little "tin Lizz The roads are very good aro here. Aren't we having fine wea er now?—George Hoover, Cla County, Pa.

Sometime I want you to tell about your club work. Do you th Forum boys would like to hav whole page one week just to about the clubs to which they long? What do the rest of think?

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks:—This strange looking group of words will turn out to be a familiar saying which you can prove to be a true one by just looking out the window on a day in May. All you have to do is to strike out certain letters in the puzzle; the letters which spell the sentence go straight ahead after you strike out the ones you do not need. I'll give you a hint: you really don't need the letters S T O E I in the first line. Now, with this key to the mystery, you can go right on with the sentence. When you have solved this puzzle, send the answer to me on a POSTAL CARD, so that it reaches me not later than May 9. BE SURE TO SAY HOW OLD YOU ARE. The ten children, sending the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

Puzzle Prize Winners

The answer to the puzzle published in the April 11 issue of Pennsylvania Farmer is: 1 plus 3 minus 2 plus 5 minus 4 plus 6 minus 7 8 minus 9 equals 1.

The prize winners are: Mil Brackbill, age 8, Paradise, Olive Ellsworth, age 9, Meshop Pa.; Erma B. Diemage, age 11. Holland, Pa.; Leona Fairfield, ag Weedsport, N. Y.; Eugene A. Ho age 10, Newville, Pa.; Sarah Ka age 9, Cheswold, Del.; Cornelia Musser, age 9, Mount Joy, Pa; W. Sensenig, age 11, Ephrata. Josephine A. Tortarolo, age 9, Be wyn, Pa.; Lester M. Weaver, ag New Holland, Pa.

If You Use a Pressure Cooker

You'll Find These Rules Bring the Best Results

FOR meats and for many vegetables, especially peas and corn, the pressure cooker is recommended, altho they can be successfully canned in the hot water bath if directions are closely followed and absolute cleanliness in every detail is observed.

The following rules should be observed to secure the best results in the operation of steam pressure canners:

1. Place each jar in the canner as soon as packed.
2. Have the water come to the platform, but not above it. Add hot water occasionally to prevent its boiling dry if the cooker be on the stove some time before being used.
3. When the canner has been filled, fasten the opposite clamps moderately tight; then tighten each pair of clamps fully. The canner should be absolutely steam tight.
4. Allow the pet cock to remain open until the live steam escapes from it, then close the pet cock completely.
5. Force the pressure to the required point before counting the time.
6. Maintain a uniform pressure during the sterilizing period. This may be done by turning down the gas or oil flame, or moving canner off the stove partially.
7. When the processing period is up, allow the canner to cool until the steam gauge registers zero, and then about five extra minutes before opening the pet cock.
8. Loosen clamps and take cover from canner. Remove the jars and tighten the tops at once. Use the same methods as when taking them from the hot water bath. (See previous lesson.)

Canning Meat

The canning of meat is really quite simple. All bone and surplus fat is trimmed away and the lean meat is cut into convenient pieces to be packed into the jar. A pint jar, tightly packed, will hold about a pound and a half. The raw meat is packed into hot sterilized jars containing salt (one teaspoon for each quart.) No water is added. The jar is partially sealed and processed three hours in the hot water bath or one hour in the pressure cooker at fifteen pounds pressure.

Important Caution

If there be any question as to whether a canned product has spoiled, it is always far better not to take a chance. Burn it immediately so that no person or animal will be hurt. The poisoning cases we read about could have been avoided by this caution.—Grace E. Fitts.

Kitchen Curtains

HOW about the kitchen curtains this spring? When the budget for new furnishings is limited we are sometimes puzzled just how to make it stretch but by saving the small scraps left from the spring sewing a little touch of color can be added to an inexpensive voile or cheesecloth and some very pretty curtains made.

There are so many ways to add to the beauty of kitchen curtains that one does not have to wonder long just how to make them. The illustration shows one of many ways. The material is twenty-five-cent voile and the applique gingham left from a quilt, but the curtains are very attractive and are not heavy enough to shut out the light even tho they are closed.

Square, round or heart-shaped designs can be cut and placed in a group in the inside corners or above a regular curtain hem—a bias strip on the edge or inside the hem is a neat finish. A square of unbleached muslin with the same decoration will give you a pretty breakfast cloth for the kitchen table.

Curtains with a touch of color.

One who prefers tie-back curtains, will like the light gingham with a ruffled edge. These can be in pink, blue or yellow if the walls are light gray or ivory, which seem to be the popular shades this spring. The guaranteed ginghams will stand light and the laundering and the little figured patterns are quite attractive.—C. S.

A Novel Notion Booth

SOMETHING new for a bazaar, or any place at which women are trying to raise money, is a notion novelty booth. So many times women would buy if they were shown something they really needed. But why buy pillow cases, aprons, doilies or the hundred other bits of fancy work that are usually for sale when one is already overstocked with such articles?

All the old and new magazines available were scanned for large colored pictures of men, women, children and automobiles. These were cut out and pasted onto cardboard. Old boxes supplied the cardboard, flour and water paste was used, and all pictures were well pressed. The notions—thread, pins, buttons, hooks and eyes, powder puffs, tape, etc.—which came from the five-and-ten-cent store were then sewed to the pictures with a large needle and stout thread so as to form a part of them.

For instance, two rolls of tape formed the wheels of an automobile as did cards of buttons cut in circles. Powder puffs, spools of thread and darning cotton became muffs for the fashion figures. Cards of hooks and eyes, dress snaps and safety pins were cut so as to form parts of the dresses of the bright colored figures. There was a great variety of notions and with a little ingenuity it was easy to fit them into the pictures.

The articles were sold for five and ten cents above cost. While this was not a great deal, nothing was left over, which is more than can be said of a great number of bazaars.

The booth looked very inviting. The variety and bright colors of the finished products as well as their usefulness were a great attraction and it was voted the most successful booth at the bazaar.—Mrs. E. M. Clark.

One Opinion

HAVING just received and read the article on page twenty-nine of the March 14 issue, I feel like saying that the wife who does all the things mentioned in the article needs someone to open her husband's eyes.

In my home, if the pump freezes up, my husband thaws it out. We burn wood entirely. The woodshed is attached to the house, so all I would have to do would be to walk across the two rooms from opposite sides, if I carried the wood. However I do not. My children that are of school age are doing that every morning and evening. They also pump the water morning and night to fill the tank attached to the stove. The pump works easily and is in the house, so it is not too hard for a school child (the youngest is seven) to do.

Making a Mistake

The trouble with "Jenny" is that she is trying to do everything and then wonders why she does not accomplish anything. Also the children are not learning to do the tasks which would be easy for them, and save "Jenny" many steps.

Let the husband thaw out the pump and the children carry the coal up from the cellar. They will not then need gymnastics at school.—Mrs. O. D. B. C.

Editor's note. The writer is more fortunate than "Jenny." We cannot agree that Jenny's children would not need gynastics if they carried coal. In our opinion they would need them more than ever, so that they might be taught how to carry the coal without doing themselves serious injury.

Taking Monday Off

THIS is Monday—traditional washday—but instead of washing about 100 rural women gathered this morning at the Rennert Hotel, Baltimore, to receive instruction in parliamentary law. It was the fifth and last lecture given on the subject. After luncheon, Miss Graham, the Baltimore County Home Demonstration Agent, introduced Miss Venia Kellar, the State Home Demonstration Leader, who gave some very good counsel.

Miss Kellar spoke on her desire, born long ago, that the several groups of farm women studying home-making from many angles under the county agent, could at times gather together for lectures. The desire has been at least partially realized, for last week, for instance, a clothing specialist talked on sensible dress and correct dressing. This fine talk the writer missed, but from what she has been told it was an address from which both urban and rural women could learn something, whether they have much or little money to spend for clothes.

Combine for Special Lectures

Baltimore County has sixteen groups of women who have formed clubs under the supervision of Miss Graham, and this county was the first to take the initiative in combining the groups for special lectures. Nineteen of the twenty-one counties of Maryland have full time home demonstration agents.

Miss Kellar brought the enthusiastic attention of her audience to the short course for rural women to be held at the Maryland University, College Park, beginning June fifteenth. She said that 301 women took the course last year, and tho the weather happened to be the hottest of the season, not one woman was heard to complain, which only goes to show the superior stuff of which Maryland women are made!

The Cost Is Small

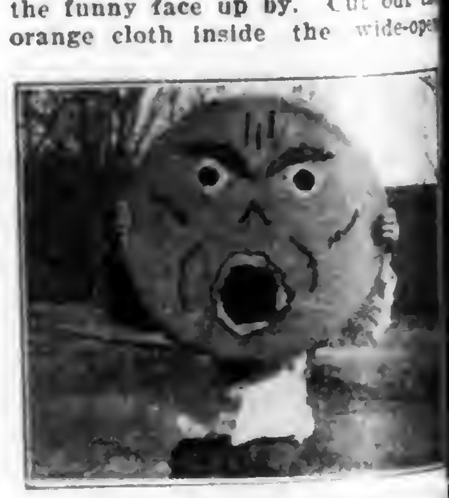
The cost is five whole dollars. Miss Kellar hopes that 500 women will attend this year. A bigger and better course has been arranged, tho to hear those who have attended heretofore, it could be no more delightful. Here is a place where work is pleasure and there is much honest-to-goodness frolic.

Tho June may be strawberry time, chicken time, almost harvest time, let us all go to college for a week in June. They are having a Colonial Party this year instead of Stunt Night. Take with you your great-great grandmother's dress. Won't it be fun?—E. O. J.

For the Rainy Day

TACK a piece of orange-colored calico smoothly over one side of a barrel hoop. Cut out features, or draw them with crayons, if you prefer. Make the eyes blue, pupils black, wrinkles and wide-open mouth red. Red, blue and black papers cut out were used for the funny face in the picture.

Tack a stout cloth strip to hang the funny face up by. Cut out the orange cloth inside the wide-open mouth. Call this face S[illegible] y Boy, hang him between two [illegible] over the doorway, and try th[illegible] pe[illegible] nuts, hickorynuts, pap[illegible] other missiles thru his [illegible]



Sunny Boy.

If there are enough pla[illegible] choose sides. Give each play[illegible] missiles and let each in turn try throwing thru Sunny Boy's mou[illegible] This is colorful sport for a [illegible] day. Sometimes the whole [illegible] will be interested in taking part.—[illegible] W. W.

Three Shortcake Recipes

Try the Dessert That's Sure to Be a Family Favorite

THE very word, "shortcake" brings up thoughts of a rich and vorite dessert usually connected ith strawberry time. But all thru e summer season with its fresh uits and even into the winter, deghtful desserts can be made if the veral recipes for the cake are used d then filled with raspberries, ackberries, peaches, gingered pears, erries—almost anything.

A great many people never make ything but the particular shortke common to their section of the untry, but it is a pleasant change r even the most palatable dish to varied now and then. Any one the three cakes is a real confecn if made carefully.

NEW ENGLAND SHORTCAKE

Sift together three cups of flour, quarter teaspoon salt and three aspoons baking powder. Cut into e and a half cups of lard and oisten with enough milk to make dough. Roll into a sheet half an ch thick, fit into bottom of a large n, spread with butter and lay anher sheet of dough on top. Bake a fairly hot oven for ten minutes, it and spread the first layer with esh sugared fruit, top with the her crust, pour more fruit over d serve in squares with fruit juice thin cream or both.

CREAM SHORTCAKE

Sift together three cups of flour, quarter teaspoon salt and three aspoons baking powder. Moisten th thick cream to make a dough. t out very carefully into a sheet. with round cutter into individual cakes and bake like biscuit in a hot oven, using two of them for each shortcake.

A very nice sauce to serve with this, or any shortcake, is made by beating two egg whites until very stiff, sweetening with powdered sugar and beating in a cupful of mashed fruit, such as is used between the layers.

SWEET SHORTCAKE

Cream together, until very smooth, one cup of sugar and a tablespoon of butter. Add the well beaten yolks of three eggs and the white of one and a pinch of salt. Beat and add half a cup of water and half a cup of milk. Sift two and a half cups of flour with three teaspoons of baking powder and add, beating well. Flavor with vanilla, beat again and spread in shallow pans. Bake about ten minutes in a moderate oven. Cool.

When ready to serve fill with sugared fruit or berries, top with a sauce made of the other two egg whites beaten very stiff, slightly sweetened and mixed with crushed fruit drained of most of its juice. A little whipped cream on the top of each serving looks attractive and tastes delicious.

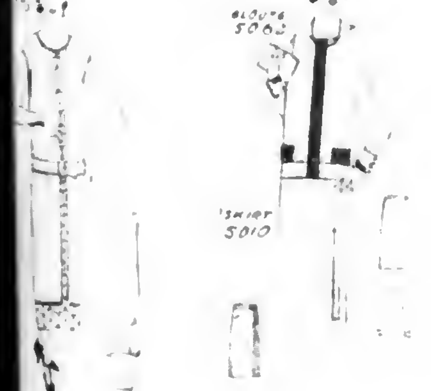
Whether using the sweet or biscuit-like recipe, most people like to have extra fruit served and it is nice to pass a bowl of the strawberries or peaches, sweetened and crushed and chilled.

Shortcakes are so rich that they should follow a rather light menu as they are almost a meal in themselves.—E. M. P.

For the Ladies of the House

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

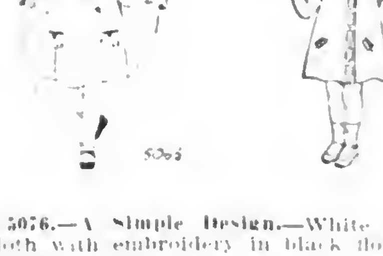
[illegible]—**A Pleasing Tunic Style.**—Figured and plain voile are here combined. Faille and satin, plaid and plain flannel, or gingham and voile would be attractive. The peasant sleeve may be omitted. The width at the foot is 56 inches. Six sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. To make the style as illustrated in the 38-inch size in the large view requires [illegible] yards of 40-inch figured material and 2¾ yards of plain material. Pattern, 10 cents.



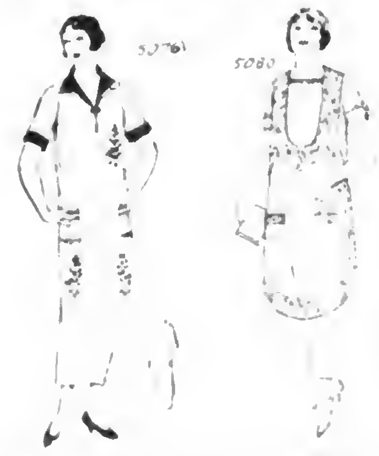
5062-5010.—**A Stylish Costume.**—[illegible] Skirt is [illegible] sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure [illegible] Two patterns, 10c each.

[illegible]—**A Dainty Frock.**—[illegible] of the new shades [illegible] pongee or voile with contrasting color. [illegible] crepe or crepe de [illegible] 1, 2, 3, 4 and 5 years [illegible] requires 1⅝ yard [illegible] Pattern, 10 cents.

5064.—**For the Tiny Tot.**—Brown or blue linen with cross stitching in colored mercerized thread would be very attractive for this model. It is also good for pongee, poplin and chambray, as well as crepe and rep. Three sizes: 2, 4 and 6 years. A two-year size requires 1¼ yard of 32-inch material. Pattern, 10 cents.



5076.—**A Simple Design.**—White broadcloth with embroidery in black floss and facings of black satin is here shown. One could make this in cotton rep or in unbleached muslin, with any desired color or trimming in contrast. Six sizes: 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4¾ yards of 32-inch material. The width at the foot is 1⅝ yard. Pattern, 10 cents.



5080.—**Attractive Apron Model.**—Cretonne and unbleached muslin are here combined. Sateen and chintz or percale and [illegible] good in combination for this style. One size: medium. To make as illustrated will require [illegible] yard of 32-inch figured material and [illegible] yard of plain material [illegible] Pattern, 10 cents.

Who is Supporting Your Wood Chucks?

The woodchucks on your farm live on the crops you plant. They grow fat on the results of your labor. They also undermine embankments (and levees).

It is time to make a serious effort to get rid of these pests, and fumigating with Cyanogas (Calcium Cyanide) is the most satisfactory and economical way to do it.

CYANOGAS
(REG. U. S. PAT. OFF.)
CALCIUM CYANIDE

placed in small quantities in the openings of the burrows gives off hydrocyanic acid gas. The fumes penetrate the burrow and kill the woodchucks almost instantly. They cannot escape it.

Your dealer has Cyanogas (Calcium Cyanide) or can get it for you. Or, we will deliver a 5 lb. tin sufficient to kill all the woodchucks in 80 burrows for $2.50.

Another Lesson in Basketry

This Time It's a Flower Basket of Fish Bowl Shap

THIS lesson will be easy if you review the directions given in the February 21 number of Pennsylvania Farmer.

Coil and soak several weavers of No. 2 reed. Cut eight twenty-five-inch spokes and one fifteen-inch spoke of No. 3 reed and put these to soak.

Start your center just as you started your first mat, by making one-inch slits lengthwise in the middle of four spokes, and slipping the other four spokes thru these, so that you have a cross. Insert the extra spoke in the upper vertical group. (See Figure 2, Lesson 1.)

Fasten your weaver as in the first lesson, and weave three times around with it, going over and under the groups of spokes.

Four Rows Then Separate

Divide your spokes into groups of two (and one of only one spoke) and weave four rows of "one over, one under." Then separate into single spokes and weave in the same way until the base is four and a half inches across. Now dampen your work well, after gathering up the spokes and tying them (as explained in Lesson III).

When the reed is pliable, untie the spokes, but keep them turned up, and weave as before for three inches, letting the spokes gradually flare out. Then weave two inches more, pulling the weaver to draw the spokes inward. (Remember that you want the basket to take on the shape of a fish bowl.)

The flower basket of fish-bowl shape appears at the left.

The Border

This basket is finished with a border in two rows. Be sure to dampen your work well before starting, and be sure to leave the first part of your border loose so that the last spokes will fit into their places easily.

First row. Bring each spoke back of the next one on the right, and out.

Second row. Bring each end over the next two ends on the right and push it thru the border to the inside of the basket.

Two pieces No. 5 reed, thirty-six inches long. Whittle the ends to points and push one end of each into the weaving, two inches from the bottom of the basket, about two inches apart. Let the ends of the handle follow the spokes to the edge of the bottom. Twist the heavy handles into an even coil, beginning a little above the top of the basket and continuing to the same point on the opposite side of the basket. Then push the two loose ends of the handle into spaces exactly opposite those at which the handle started.—H. H.

Easier for Mother

THE wide-awake teacher provides her pupils with plenty of work and, incidentally, their mothers as well. When the children come h from school, crazy to decorate house as teacher has the sch room, mother will find it much ea if she has some material to w with.

Save Odds and Ends

It is a good idea to save all colored paper, strings, bits of r bon, etc. Usually, this does not p vide enough. If you cannot get th supplies from your stationer or the five-and-ten-cent stores, teacher will probably give you address of a firm where you send and get them. Such supplies not expensive. Then when the c dren come home wild to make val tines or decorate for holidays, mo er won't be at her wits' end to kn what to do.

A subscription to a teacher's m azine and a good drawing book a lot of help in providing patte and designs. Often a mother ha knows how to help with this wo but she will feel amply repaid by children's enjoyment and the work they will do.

A favorite amusement with children on rainy days is mak what they call "picture roo Some old mail order catalogs, [illegible] sors, and blank sheets [illegible] wrap paper or old wall paper [illegible] ple provide the material. Furni rugs, draperies, etc., are [illegible] from catalogs and pasted on the sheets as the children think rooms should be furn[illegible] O children can work out [illegible] te color schemes, using [illegible] ored ons when they do not [illegible] ve col pictures. Even very [illegible] ll child will learn to cut and p[illegible] very ly in a short time.—Mrs. P. W. L

A Book to Own

He Had a Wonderful Time

The Little Fellow Who Used His Ingenuity

MY HUSBAND came to the house with a funny smile twinkling his eye and said: "You had better down to the garage and see what ur son is doing."

Of course I knew it was mischief. my husband would have claimed e interest in the lad. Always en it is "your son" I become wary. I slipped out the door and into a e door of the garage. Of course, ny had his wagon, and it was ked up with an automobile jack. on getting closer I discovered at he wished to take his wagon out the mud and was getting his ains on.

Always New Ideas

There lay the story. Chains. How ny varieties he has had—and none to work satisfactorily. But al- ys there are new ideas.

The little fellow dropped his work very serious work it was to him— d came over hurriedly and put his s about me and told me what a eet, sweet Mother I was!

He had taken a box of paper clips m my desk and had strung them what a laborious process—to make chains and was then trying to vise some means of fastening the ains to the wheels.

I remembered then that Kennie d sat on the couch beside the desk ile I was working at the desk the y before and had played with a x of paper clips. I remembered t he asked me where I got them. remembered that he asked me they cost very much, and I remem- d then that he had said rather fully: "I wish I were a big Ma- and had a lot of boxes of paper in my desk drawer like you ve."

Would you have punished the ild? If so, how?

Well, I sat there for half an hour tching his efforts to get his chains . He looked so like the head of our usehold when he gets stuck in the d and gets out to put his chains on. He had the same swagger—the same little whistle which changes now and then to a hum.

When they were finally on, and he had demonstrated to me, with the help of his imagination, that they would work, I took him up in my lap and we talked it over.

I then explained to him as I should have the day before, that paper clips are very inexpensive and that I would have given him a box of them if I had realized how very badly he needed them and what he was going to use them for. I tried to explain to him how Daddy and Mother had to have the clips on our desk and just what we had to have them for and that he should not have taken them without consulting one of us before he did it.

"If you had taken all there were what would we have done then?"

"Oh, but Mother I would not have done that. I looked in the drawer and you have several boxes there yet. Don't you remember you got a new supply at the five-and-ten when you were in the city last week?"

Let Them Make Their Own

Recently a prominent educator, speaking to a parent-teacher meeting in Cleveland, said that many parents stifle all ingenuity in the child with the mechanical toys they give him, that the child was much better off to construct his own games and plays and use his imagination.

The last trip into town I did purchase a set of tinker toys for my lad, but he did not care for them at all. I thought it would develop originality, but he does not seem interested in them in the least. He watches while some one else builds with them, but he is not drawn to them of his own accord.

There—I paid seventy-five cents for that box of tinker toys—and he got much more enjoyment out of a box of paper clips that cost five cents —or did I get two boxes for five cents?—May H. Mumaw.

Jack Brown's Bowlegs

"I CAME past Mrs. Brown's this morning and her little boy, k, was playing out in the yard. u know he's so bowlegged he'll ver grow up to be a full-sized man. n't it awful the way mothers let ir children walk too soon?" Mrs. ite had run in for a few minutes pass the time of day with Mrs. lton.

"You know," Mrs. Fulton respond- "I used to think children got w-legged because they were en- raged to walk too soon, but I saw picture in a magazine last month some legs so bow-legged they ld scarcely stand. I read about m, and it said that their legs had ome bent like that because they n't get enough calcium and phos- orus in their food. It also said t crooked legs and bad teeth in ldren were usually caused by not ing enough of those minerals in food. So I guess Mrs. Brown n't feeding Jack right."

What Foods Should He Have?

"Well, if that is true," said Mrs. ite, "what foods should she give k so he'll get this calcium and sphorus?"

Mrs. Fulton could not answer that stion. She had not read about the ds. She had been too much inter- ed in the dogs to think about h else. But they got out the mag- e and found that five food groups d give Jack practically all the um and phosphorus he needed.

If his mother would give him a pint of milk a day, that would provide for three-fourths the calcium and half the phosphorus. Vegetables came second in importance. If rightly chosen they would furnish seven per cent of the calcium and ten per cent of the phosphorus. Vegetables differ a lot in the amount of minerals they contain, so the article said, but they figured out that if Mrs. Brown would use spinach, Swiss chard, dandelion greens, celery, and carrots, in addition to potatoes, she could feel sure that vegetables were doing their part in supplying Jack with the necessary minerals. The addition of one egg a day to his diet would also help considerably. Fruits, too, were listed as important sources of calcium and phosphorus.

The other foods that they found important in minerals were the whole-grain cereals, such as oatmeal and graham bread.

"Now, isn't that simple," said Mrs. White. "They are all foods that we use right along. I guess we'd better take this magazine over and show it to Mrs. Brown. She probably doesn't know that Jack's bowlegs are caused by the kind of food he eats."

Bowlegs, and knock-knees are some of the many signs of malnutrition. The right food during the growing period will help children to develop straight sturdy bodies and alert minds.

Westclox

Big Ben & Company

A GROUP of nine alarm clocks and two watches doing business under the trade mark Westclox. Big Ben is easily the best known, though Baby Ben runs him a close second.

Sleep-Meter has a host of friends among people who like Westclox quality at a medium price.

America, who really founded the line, offers Westclox service at a price that makes people wonder how it can be done. Pocket Ben is a watch that takes a dollar-fifty out of your pocket and puts into it a timekeeping service worth many times that.

WESTERN CLOCK COMPANY, LA SALLE, ILLINOIS, U. S. A.

Salesmen Wanted

We have an attractive proposition for reliable men with autos to collect renewals and solicit subscriptions to Pennsylvania Farmer. Those who can devote their entire time to the work preferred. Write today for full particulars, stating your age, experience, and give two references.

PENNSYLVANIA FARMER,
261 South Third Street,
Philadelphia, Pa.

Food Chopper

The Keystone Food Chopper is constructed on positively correct principles. Will cut any kind of meat, raw or cooked; all kinds of vegetables, coarse or fine. Leaves no uncut food in the machine and no drip on the floor.

Four cutting plates with each Chopper, also Recipe Book and instruction tag. We positively guarantee this Food Chopper to give entire satisfaction.

How to Secure It.

Send us three yearly subscriptions to Pennsylvania Farmer at $1.00 each and we will forward you the complete outfit by prepaid parcel post. Given with a single subscription and $1.00 additional.

Pennsylvania Farmer
261 South Third Street
Philadelphia, Penna.

Hundreds of farmers *are making additional money during dull months*

How about yourself?

Now is the time to be planning for the quiet months during the fall and winter.

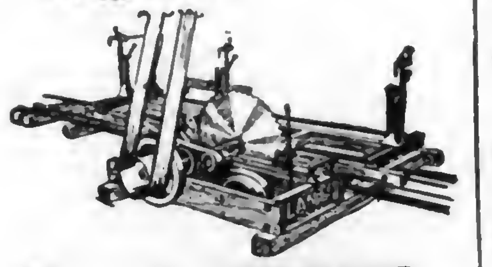
How can you keep your tractor and your men profitably busy?

By securing a Lane Tractor Sawmill and turning into lumber the isolated wood lots in your vicinity,—wood lots so far from the sawmill and railway that haulage would be too expensive,—wood lots too small to pay for the erection of a large mill.

This little portable mill is really portable, yet of large capacity. It is a Lane product throughout,—strong, durable, efficient, low in first cost, cheap to operate.

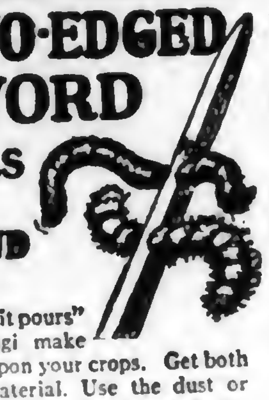
Better write today for more information.

LANE MANUFACTURING COMPANY
Montpelier, Vermont



LANE TRACTOR SAW MILL

THE TWO-EDGED SWORD THAT KILLS BOTH INSECTS AND FUNGI



"It never rains but it pours"—insects and fungi make combined attacks upon your crops. Get both with one spray material. Use the dust or spray whose high percentage of arsenic oxide means sure death to insects and whose high copper content means speedy cure for fungus growths. Supply yourself at once with the two-in-one and powerful compound.

PBK Insecticide Fungicide Dust and Spray

So strong that a 5-lb. package ($2.50 worth) will effectively treat a whole acre of truck, tobacco, etc. Yet *safe*—will not burn. Sticks tight. 1-lb. package, 55 cents. Send for Spraying Guide and testimonial endorsements. Write Dept. P-5

Where We Are At

QUOTING from J. E. F., of Tioga County, Pa., I desire to say a few words about prices now as compared with those paid by farmers some years ago.

Soon after we bought our farm our tax card read like this: County tax, 4 mills, county poor tax, 2 mills. Now it reads like this: County tax, 10 mills; county poor tax, 8 mills.

At that time we paid $12 for a harrow. We pay $30 now. Then one paid $130 for a binder; the present price is $100 more. Blacksmiths' prices have increased 100 per cent and barbers are close in the race. Many a troublesome tooth I had removed for twenty-five cents, now the operation costs one dollar.

Fuel for Hauling

Fuel was to be had free of charge from the nearby forests; now it costs $3.50 to $5 per cord. We bought better bituminous coal for $2.50 per ton than that for which we recently paid $7.

Thirty or thirty-five years ago farm hands were paid $1 to $1.50 per day—those working by the month received $15 to $25 per month. Farmers here pay $3 per day, sometimes $5. The flour in their food used to cost from $1 to $1.40 per 49½ pounds, now it costs $3.10. That is where we are at, but we are going to keep on keeping on. It is darkest just before dawn.—M. C. S., Potter County, Pa.

America, Hold Fast

DR. GIFFORD GORDON, a citizen of Melbourne, Australia, is in our country studying our dry law and its effects. "There is no hope," he says, "for prohibition in Australia or anywhere else until the problem is actually solved here." He has therefore spent months observing conditions in cities of both East and West; he has talked with public officials, he has pored over the records of jails and reformatories, and has studied the statistics of health bureaus. Neither time nor trouble has been spared to make the investigation thoro. The results of his investigation are such as will surprise many people whose chief source of information has been the daily press and current talk.

In an address before the Friends' Temperance Association of Philadelphia recently he answered, in the light of his findings, those arguments most often used against the Eighteenth Amendment. The first of these states that the amendment has created an alcohol problem; that, having prohibited good honest liquor, it has brought about the use of unwholesome beverages, and "so many of our good citizens are dying from this poor booze."

"I never knew," says Dr. Gordon, "of a 'good' citizen defying the law. How came they to die that way?"

Not So Many Deaths

As a matter of fact, however, statistics show that there were in New York City during the last four "wet" years 2061 deaths due to alcohol, but only 835 such deaths during four dry years. In Philadelphia the Bureau of Health figures hold alcohol responsible for 217 deaths in 1917, the last "wet" year, but for only ninety-five deaths in 1924. It is a great pity that those who mourn so many "good" citizens don't know the truth.

Before the passage of the Eighteenth Amendment one man, with whom Dr. Gordon talked, had under his general management fifty institutions scattered about the country for the care and treatment of inebriates, and these places were crowded all the time. Now all but twelve of the fifty places have gone out of business, and there is not much doing for the twelve. Of the other thirty-eight institutions, a number have been turned into hospitals and training schools for disabled soldiers. Somehow the "wet" press reports and current talk on this point cannot stand the test of facing the facts!

The second reason given against the dry law is that it is responsible for a great increase in crime. Yet at Birmingham, Alabama, a new jail was completed at about the time the amendment became effective and it has never yet been needed as a jail. The building is now occupied as a reformatory for delinquent boys. In a certain house of correction in Iowa there were 1200 prisoners in 1917. Now the old building, no longer needed, has been taken away and the site used for a baseball stadium.—L. E. B., New Jersey.

The Rural Route

THE object of the rural route of today is to deliver the mail to the patrons promptly and in as good condition as possible. To do this the patron must cooperate with the carrier and see that everything relative to the box is in good condition. Here are a few suggestions as to what is required.

See that the mail box is a standard box, approved by the Postmaster General; that it is erected on a firm post not too high or too low, but so the carrier may reach it easily from his conveyance when delivering or collecting mail. Paint your mail box white, the signal red, and place your name on the box. If your box is not already on the right hand side of the road, move it at once as the of the carrier is in danger as as you leave your mail box on wrong side of the road.

If Back from the Road

If you live any distance from box you should have a large with a leakproof lid on it so the carrier may put parcels in it stead of hanging them on the side. Keep a supply of stamps hand and have your letters sta before mailing them. It is al impossible for a carrier to pick nies out of a box in the winter when his hands are numbed the cold. It is easier and handier for both carrier and pa if the letters are stamped.

A Successful Experiment

If these requirements are lived to it will enable the carrier to his patrons still better service. rural route, without a doubt, been one of the most successful periments ever tried out, and here to stay.—H.

Prices Then and Now

DEAR Pennsylvania Farmer: reading your interesting paper I noticed a small article ed "Prices Then and Now," by J. F., Tioga County, Pa. Would say that Mr. J. E. F. surely only the bright side of farming. I advise him to take into consideration the following:

Prices then: Bran, 40c per middlings, 60c per cwt.; flour, $ bbl.; taxes, $15; shoes, $1.25 pair.

Prices now: Bran, $2 per middlings, $2.50 per cwt.; flour, per bbl.; taxes, $75; shoes, $1 $15 per pair.

If the above is taken into eration then farming is as the saying says: "It is not what cracked up to be."—J. H. S., County, Pa.

As a result of a partly-com course in advertising, Jerry painted and hung in front of country store the following:

"My eggs can't be beat!"—Christian Herald.

Camden's New Market

THE need of South Jersey, with its rapid increase in suburban population, for a wholesale produce market within its own area will be met by the City of Camden, this year, thru the opening of a municipal market on the old Philadelphia and Reading railroad docks. It is expected that hundreds of farmers, dealers and at least a million consumers, will benefit from the advantages to be effected by the new market, shorter hauls for farm products, less handling and quicker service.

Plans for the enterprise include the marketing director system, which provides for an official to manage all marketing activities, with state bureau cooperation, to extend the advantages of the system to growers, dealers and the public, especially thru development of more efficient methods of distribution.

Without Cost to Taxpayers

The city will erect and rent at reasonable fees, stalls and stores. These will accommodate both a wholesale produce district and the wholesale farmers' market. The operation will be conducted without profit to the city, but at no cost to taxpayers, as the income from fees will be put back into the market project to lend every encouragement to producers and dealers to ma a great trade center.

With the new market in Ca many farmers will find it more venient to sell their products on Jersey side of the river, instea carting to Philadelphia. Under ent conditions, hundreds of lo produce are trucked into Phi phia every summer day, unl resold to Jersey retailers, the loaded and carted back into New sey towns.

The Advantages Recognized

Many Philadelphia comm men see the advantage of the plan and will have branches i new Camden market, handling the New Jersey end of their imp fruit and produce business as as the sale of home grown Railroad companies already hav sured the city commissioners favorable rates will apply to ments to and from the new ma

Camden also plans to develo tail farmers' markets along similar to those in successful tion in Trenton, Perth Amboy, other cities. One or of retail markets will be opened year close to residential sections allowed to develop as demands rant.

Wheat, Number 2 red winter (Phila.)	1.79	1.63	1.67	1.21
Corn, Number 2 yellow (Philadelphia)	1.28½	1.30½	1.33	.91¼
Oats, Number 2 white (Philadelphia)	.56	.55½	.56½	.60¼

Farm Products Prices and Prospects

April Crop Prospects

HE winter wheat prospects in Pennsylvania on April 1 were er than for the past two years. past ten years' records show that average crop declined four points condition from December 1 to il 1. Contrariwise, the present t crop has improved in condi-, advancing three points since ember 1, 1924, largely due to the unt of snow protection the past ter.

he average condition of the Unit-ates winter wheat crop was 68.7 cent of normal, compared with per cent last year and 81.2 per the average condition for the 10 years on April 1. The de- in condition from December 1, 4, to April 1, 1925, was 12.3 ts, compared with an average ine in the past ten years of 4.4 ts.

Rye

he rye crop in Pennsylvania was wise improved thru favorable ter weather. The reported condi- on April 1 was 87 per cent, com-ed with 86 per cent on April 1, 4, and 89 per cent, the ten-year dition on April 1. Rye, being a dier crop, as usual suffered much winter damage in the United tes than did winter wheat. The rage condition of rye on April 1 84 per cent of normal, compared h 83.5 per cent on April 1, 1924, 87.1 per cent, the average condi- for the past ten years on April

Farm Wages

An increase is noted in the Penn-vania scale of farm wages, com-ed with January 1, 1925, but pared with April 1 last year, the ges are slightly lower. Monthly ges, with board, averaged $39, pared with $39.50 one year ago; thly, without board, $58.60, com-ed with $59; daily, with board, 45, compared with $2.50; daily, hout board, $3.35, compared with .30.

For the entire United States there practically no change in the ge level compared with one year on April first. Wages were re-ted generally lower in the north- states from Wisconsin and In-a eastward, as well as in the far tern and range states, but higher the southern and middle western tes, west of the Mississippi.

ancaster Tobacco Letter

UYING of the 1924 crop contin-ues with a number of tobacco in the field. At its present rate movement, the tobacco should n be out of the hands of the wers, for no more than approxi-ately twenty per cent remains un-ld.

Prices have held fairly steady, al- buyers show an increasing ten-ncy to bid lower in their transac-s. Fifteen and sixteen cents per und for wrapped grades are still ing paid but ten and twelve cent les are far more common.

Quite a bit of the leaf will be cked by the growers themselves is year—probably more than in y previous season for a good many ars. Many farmers are employing ckers to handle their crops at a ed price per pound for packing d storage. Other growers are de-ering their leaf to the cooperative cking warehouses which will ndle a large acreage, according to ent reports.

The cooperative marketing movement is making some headway. The permanent committee of organization, consisting of twenty-five prominent growers, business men and bankers of the county, has been named and will hold their first meeting next week. The drive for members will probably start as soon as the committee irons out the details of organization and settles the important legal questions which confront the growers in their attempt to organize.

The 1925 crop is making its bid for attention, and preparations are going forward to get the seed beds under way. Indications at this time point to about a normal acreage for 1925, and growers do not seem to be discouraged by the comparatively low prices paid for the crop this season.—Garden Spot Farmer.

Better Times Ahead

AFTER suffering longer than any other major farm enterprise from the effects of the general agricultural depression of 1920-1921, and from continued overproduction, the beef cattle industry of the United States seems at last definitely moving toward prosperity, it is declared by the United States Department of Agriculture. Evidence of the trend is furnished not only by the fact that prices of beef cattle this year have been above those of the corresponding period of 1924, but also by signs that the beef cattle business has been liquidated to a point at which the potential supply of beef is much reduced.

It is pointed out that the price of beef cattle has advanced in spite of increased slaughtering. This reflects an increased demand for beef.

A Cycle of Fourteen Years

There are distinct cycles of high and low prices for beef cattle. The typical cycle has a period of about fourteen years. Economists in the Department of Agriculture believe 1924 saw the low point of a downward swing that began about 1915. Altho it is too soon to be sure that the industry is now in the first phase of a long upward trend, the facts point to that conclusion. In 1922, 1923, and 1924 the beef cattle industry was subjected to the same forces that produced heavy liquidation in other farm enterprises. Liquidation in the case of cattle, however, was retarded by the fact that exceptionally heavy marketing in that period would have been ruinous not only to the cattlemen but to their creditors. In consequence, the beef cattle supply remained large, while surpluses of other agricultural products were rapidly being reduced. But toward the end of 1924 it began to be apparent that the cattle supply was steadily being brought into better relation with the demand.

All signs indicate, in short, that the beef cattle industry is headed toward lower production and rising prices. If the present cycle runs true to form, the general trend of cattle prices should be upward for six or eight years. Cattle production in this country was at its previous low point around 1913. Its last high point was touched about 1919.

Main Trend Often Hidden

Seasonal variations and special conditions often hide the main trend in the cattle industry, so that it is hard to tell just what phase of the cycle it may be in. At the present moment, however, the principal facts are clear. There is a depleted supply of beef cattle on the ranges and a heavy movement to market. A long period of falling prices has apparently been definitely succeeded by an upward movement, occurring just when it should occur on the assumption that the cattle cycle will behave normally. If the present trend is not the start of a new constructive period for the industry, all present signs are deceptive.

County News and Comment

(Continued from page 5)

eggs, 30c. Pigs high and scarce.—Q. E. T., April 17.

JEFFERSON COUNTY, Pa.—April has been exceptionally dry with hard frosts. Plowing for oats and corn about completed. Most of the oats is in the ground. A few potatoes being planted. Corn ground being disced and harrowed. More lime than usual has been used this spring. Roads have been in good condition for hauling on trucks and the fields were firm for spreading. Winter grain came thru looking well, but needs showers now. Pasture coming very slowly. Most farmers have plenty of rough feed. Mill feed high in price. Seed corn scarce and high. A good many farmers are buying thru the farm bureau. Considerable interest shown in soy beans. A larger acreage will be planted this year. Pigs not so plentiful this spring; good demand for pigs for butchering this fall. Purebred pigs of good type demanding good prices. No fat hogs. Veal calves scarce. Butter, 40@50c; eggs, 25c; potatoes, 80c. Quite a number of farmers near Reynoldsville, Pa., are building dams and stocking them with gold fish.—F. M., April 21.

LACKAWANNA COUNTY, PA.—Farmers are taking advantage of the early spring weather and are plowing, building fences, trimming and spraying orchards. Incubators at work and little chicks are running around enjoying the warm sunny days. Spring pigs seem to be rather scarce. We have had thunder showers, followed by lower temperatures, with cold northwest winds. Early shrubbery and forest trees show a sheen of green and raspberry bushes are leafed out. Winter grains looking well according to location. Bluebirds and robins are filling the air with their joyous melodies. Butter, 51c; eggs, 40c; potatoes, 90c@$1.—E. A. K., April 20.

LEBANON COUNTY, PA.—The soil for the first half of April was in splendid shape for plowing and sowing oats. Many failed to get their oats out and heavy rains when it grew black as midnight stopped work. Many car loads of fat cattle and steers and some of tobacco have been shipped. For the first time in the agricultural history of Lebanon County, traps, fitted with glass tops, so that pests can be watched with a microscope as they get busy after their winter sleep, will be set on the Peter Boltz farm at Bunker Hill. As soon as the apple scab spore shows up, word will be passed about and all orchardists will spray. It is much easier to kill a pair of spores than it is to kill millions of their offspring. Other pests will be watched for in like manner and destroyed by oil or lime-sulphur sprays and results noted.—R. I. W., April 20.

UNION COUNTY, PA.—Oats seeding will be finished this week. Many acres of sod have been plowed for corn, and it is being rolled as fast as possible to conserve moisture, since the ground is very dry. The usual acreage of corn will be planted, but not so many acres of potatoes as last year. Clover seed being sown and apple trees have been sprayed for scale. Rural schools are closing their eight-month term and many teachers will attend summer schools of some kind. Prices, eggs, 25c; veal calves, 10c; hens, 28c; wheat, $1.60; oats 55c; corn, $1.15. Good seed corn is very scarce, tho properly cared for seed corn is germinating well.—J. N. G., April 16.

WARREN COUNTY, N. J.—The latter part of March gave us May weather and April has been a cold month with the first half quite dry. Have had two thunder showers since the fifteenth. The wheat and rye wintered quite well but have not grown much yet. Mowing fields look well with a good stand. Some oats sowed and a little corn ground plowed but, generally speaking, the farmers are behind. Quite a number raising baby chicks. Eggs are hatching only about fifty per cent. Feed prices are about the same but wheat is selling at $1.40. Eggs are selling for 28c and dairy butter 45c.—A. S. P., April 21.

WASHINGTON COUNTY, PA.—With the thermometer standing at thirty degrees and ice on the ponds this morning it certainly doesn't feel like corn planting time. Farm work unusually well along for this date, oats about all in, sod all plowed, gardens and many potatoes planted. It has been too cold for vegetation, hence the grass is short. Wheat has wintered poorly and doesn't look like more than one-half crop. Livestock has come thru the winter in good shape in spite of the failure of last year's corn crop. Hay was plentiful and good, farmers are learning they can winter stock on less grain than is usually fed, provided they have good hay and don't stint the cattle. Fruit trees are showing considerable bloom, except peaches, which are almost a total failure. Much damage done in sections of this county by the tornado that passed thru on the 19th; buildings unroofed or torn down, fruit trees destroyed, hay stacks scattered and some livestock injured. Health in the community fair with the exception of the prevalence of scarlet fever of a very mild type.—J. H., April 21.

Small Grains Studied

EXPERIMENTS with small grains have been conducted by the United States Department of Agriculture at Arlington Farm near Washington, D. C., over a period of years beginning in 1907. In the earlier years the experiments consisted mainly of studies of varietal adaptation, rates of seeding, and the improvements of the principal fall-sown cereals by selection and breeding. More recently the scope of the plat experiments has been broadened. They now include a combined experiment on rate of seeding and seedbed preparation and tests of several seed treatments for increasing the yield and controlling diseases, particularly the cereal smuts.

Experimental results obtained during the fourteen-year period 1910-1923 are reported in Department Bulletin 1309, just issued. A copy of this new bulletin may be obtained upon request, as long as the supply lasts, from the United States Department of Agriculture, Washington, D. C.

SEND NO MONEY for SILVER LAKE CHICKS
Just mail your order, we ship C. O. D. and guarantee prepaid 100% live delivery of sturdy, purebred chicks from healthy, bred-to-lay flocks. Wh. Br. Buff Leghorns, 10c; Bd. Rocks, S. C. The Installment Plan

Study It—It's Not Always Cheapest in the End

"IT'S easy to buy on the installment plan, and you can use the goods while paying for them." That sounds attractive, but before going farther, stop and figure out what this special service is going to cost. In the majority of cases the result will surprise you.

My attention was first called to the cost of this special service last summer by a neighbor who wished to add some extra equipment to his farm. He was well rated at the local bank, and a loan could have been arranged at seven per cent interest. Thinking this too high, he tried out the time-payment plan, ordering implements to the amount of $600; the terms being $50 per month without interest until the bill was paid.

Both parties carried out their contracts to the letter, but after final settlement was made, my neighbor and I called at the local dealer's. There, we learned that the implements could have been bought for $550 cash. Granting that a bank loan was necessary, this would have brought the amount to $588.50 including interest, or a saving of $11.50 over the installment plan. This did not include postage, paper, or time spent in sending the monthly payments.

The company was not to blame. My neighbor's account, along with dozens of others, had to be taken or. This required clerks, tabulat investigations, etc., plus a fair of interest. All this has to be for and in every case the buyer the paying. Therefore, it is practice to find out in advance what an article is going to cost. can easily be done by learning cash price. Freight and handling penses must be reckoned with, then if the cash is not available, rate of interest on a loan estimat By doing this, an attractive bar may prove to be quite expensive.

The time-payment plan has rightful place, but it can be overdone, especially on the where one seldom takes all the into consideration.—F. R. Cozze

Fertilizing Asparagus

(Continued from page 17)

eral applications of high-grade ed fertilizer, of supplementary ap cations of nitrate of soda, and of plies of readily available plant both at the beginning and at the of the cutting season. When consideration is given to these fa the growers are able to produce only large yields per acre, but paragus of a quality that comma an attractive price in the market. J. G. L.

Concrete Walls without Form

(Continued from page 3)

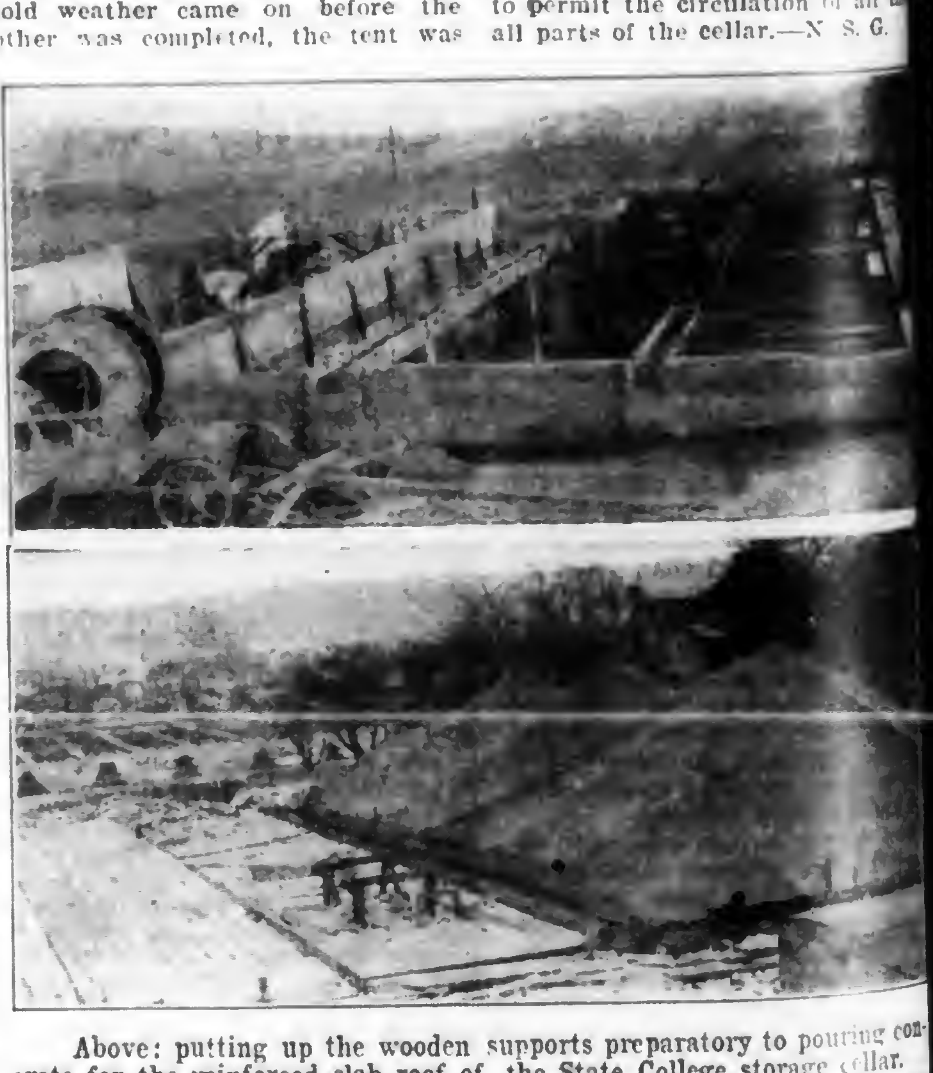
walls, on the outside to drain away any water that might tend to collect and cause pressure against the walls in freezing weather.

The pictures reproduced on page thirty show the details of the construction of the roof. The top illustration shows the forms which were used in constructing the columns to support the roof, and the woodwork upon which the concrete for the reinforced slab roof was poured.

The lower picture shows the roof of one storage cellar completed. As cold weather came on before the other was completed, the tent was put up to protect the concrete fr freezing. The top of the cellars to be covered with two or three of soil.

It has been found that where structure is built like these cellar State College, and two or three of soil placed over it, the humid of the interior may be controlled ventilation. The temperature is trolled by the movement of the The large driveway doors at the of the cellar meet most requireme for ventilation.

Usually a raised wood slat floor used to carry the storage load to permit the circulation of air t all parts of the cellar.—N. S. G.



Above: putting up the wooden supports preparatory to pouring concrete for the reinforced slab roof of the State College storage cellar.
Below: heating stoves under this tent protected the recently completed roof until the cement hardened.

Swiss Weather Prophet

A Weather Warning That is Dependable

The Swiss Weather Prophet is made of hardwood. The house is decorated in front with a stag's head, a bird, glass windows and a thermometer between the doors. On the green covered roof is a starling's cage. The inner background is decorated with views of Switzerland. There are two doorways. When the carved figures of the two children come out look for fair weather; when the little old witch comes out, rain or snow with stormy weather is sure to come.

Scientific and Accurate

This instrument is made on scientific principles. The figures which prophesy the weather are suspended on a platform, with a piece of catgut. This catgut is sensitive to the least change of atmosphere and is so adjusted that the figure of the witch comes out in advance of rain and the figures of Hansel and Gretel for fine weather. This Weather House will be sent prepaid for two yearly subscriptions at $1.00 each or with your own renewal and 50 cents extra. Reward No. 126.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

FEEDING COB MEAL SUPPOSED TO CAUSE ABORTION.—I do not keep a dairy but I do handle a good many cows during the year, as I take springers to board for a dealer during the winter. The point is that two years ago the dealer had quite a number of cows here during the winter and there was one lot of about twenty that weren't due to calve for several weeks. I had an extra lot of cob corn (but A-1) that winter, and as they were an extra lot of fine cows I asked him whether I should give them a couple of quarts of cob corn meal twice a day and he stated that would be fine. After about two weeks of feeding cob meal the cows started to slip their calves which were from four to six weeks too soon. After the fourth cow slipped hers, the dealer and owner came to me, saying to stop feeding cob meal. The dealer claimed the cob meal was the cause of abortion. I have known this to occur since in stables where they fed cob meal liberally. I have not ever met any other man that felt this might be the case, but still some of them lost cows by so doing and are not convinced.—C. S. W., Doylestown, Pa. We thank you for your interesting letter. It was formerly claimed that abortion was due to injury, such as blows, horn thrusts, falls, etc., or the eating of spoiled food and of certain plants having oxytocic properties. While abortion may occur from such causes in a limited number of cases, careful investigation has demonstrated these claims to be largely unfounded. We should like to hear from readers who are feeders of cob meal to pregnant cows.

SORE EAR.—We have a female collie that has for some time been troubled with a sore ear, causing her to shake the head and scratch. I dislike to kill her.—L. L., Calipon, N. J. Apply hydrogen peroxide to remove pus, then apply impalpable boric acid. The ear should be treated twice a day.

LOSS OF APPETITE.—I have a cow about twelve years old that does not eat much hay or corn fodder, but she is fond of corncobs left by the hogs in the yard. This cow is falling in milk yield and growing thin. I have good hay and fodder but she refuses to eat it.—R. S., New Castle County, Del. Give her one dram of fluid nux vomica, one dram of fluid extract of cinchona, two drams of Fowler's solution at a dose in one pint of water as a drench, or give the medicine in drinking water three times a day. Feed her plenty of roots and the kind of food she craves.

THOROUGHPIN.—I have a horse that has thoroughpin affecting both hind legs; the bunches are not large, do not seem to cause pain or lameness.—S. C., Greene County, Pa. Apply equal parts of tincture of iodine and spirits of camphor to bunches daily. It is always difficult to reduce such bunches and when the animal is not lame, leave him alone.

WEAK CALF.—My cow was bred on March 14, had calf November 30, but the calf is weak, cow gives very little milk. She cleaned all right; will she again breed?—C. H., Tioga County, N. Y. Doubtless the calf came two weeks early, therefore it is not unusual for such a calf to be weak; besides, the cow is likely to give less milk than if she carried her calf full gestation period. Mix equal parts of powdered gentian, ginger, bicarbonate of soda, common salt together. Give her two tablespoonfuls at a dose in ground feed two or three times a day. She should be well fed and kept in warm stable.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

9 million people buy through this catalog. Why?

HERE are four reasons why nine million families buy through the Sears Roebuck Catalog:

1—You can save money by doing so, on any of 35,000 items covering practically every personal and household need.

2—You are dealing with a thoroughly reliable house—The World's Largest Store, in business for thirty years. And your money will be promptly returned if you are not satisfied.

3—It is the most convenient way to buy. Just sit down in your easy chair at home and write out your order. No tramping about; no tiresome "shopping".

4—Our records show that 99 orders out of every 100 are shipped within 24 hours after the orders have been received—so in less than a day your goods are on their way to you.

Zinc Insulated
American Anthony Royal
U. S. and National Fences

The Test of Time

in service on the farm under all kinds of weather conditions is the only true test by which good fence can be measured. Knowing the extra long lasting qualities of Zinc-Insulated American, Anthony, Royal, U. S. and National Fences we give this

GUARANTEE:

Our dealer will hand you with every purchase of fence our written guarantee that it will equal or outlast in actual length of service any other fence now made, of equal size wires and used under the same conditions. Any buyer who can show that it fails to do so will be supplied with an equal amount of new fence free.

Our fences have always given every user the highest degree of satisfactory service. Their quality is the result of more than 25 years of experience, with the most advanced skill of workers and progressive methods of manufacture. Improvements constantly have been added, to make them last longer and give even better service.

When you buy any of our fences from your dealer, your investment is protected with guaranteed fence service. In their making we control every process from selection of ore to the finished product. We know what our fences are and stand back of them with this unqualified guarantee, based on our past record for producing QUALITY PRODUCTS.

THE E-B LINE

For Planting Potatoes Accurately

The distance potatoes are planted affects the size they grow. The E-B Potato Planter enables the operator to plant any distance from 9 to 15 inches apart. By removing every other picker arm the distance can be increased to 29 inches apart. This wide range enables you to save seed potatoes by planting the right distance for the biggest yield.

E-B Potato Planters are simple, easy to operate and plant the potatoes in the bottom of the furrow, with unfailing accuracy. An automatic fertilizer attachment with a wide range of adjustment can be furnished. When once set it starts and stops with the planting mechanism.

Fill out and mail coupon and get free booklet describing E-B Potato Planters. And remember, whatever farm machine you need you will find it in the E-B Quality Line.

The Story of a Rural Community Church

What It's Possible to Do When Church Members Band Together

By THOMAS H. WITTKORN

ON THE main concrete road between Havre de Grace and Bel Air, Maryland, I discovered Webster Community Church. No traveler ld pass that way without seeing it as it stood most alone in the open country except for the sonage and another house across the road. I d passed lots of other rural churches standing one, on my 800-mile drive, but this one was so ferent that it made me stop to learn something bout it.

The church was an imposing structure of crete block, with imitation limestone trimming and red asbestos roofing. Happily the man ross the road had the keys. Inside the large tibule, to the left, was the Sunday School or ture room with chairs for possibly 150. ight ahead, in what appears in the picture be the back of the building, was the main auditrium.

Sliding doors between the two rooms made it sible for them to be thrown into one. Never d it been my privilege to visit such a well-appointed country church. Everything was still ining in its newness. Services had been held here for only ten months and all the ople I talked with about it were ceedingly pleased.

Room Looked Home-like

The main body of the church and lpit platform were covered with ue velvet carpet, which gave the m a finished, home-like appearance. The large pipe organ, operatd by an electric blower, was said to e good accompaniment to the r of mixed voices which had been ined by the pastor. Great stress, as told, was being placed on the sical part of the services. The pult furniture and books, altar rail, ble and organ had been given as morials, as well as the one large, d the six small stained glass winws.

The large stained glass window s installed as a memorial to twelve boys, raisd in the church, who served in the World War, of whom paid the supreme sacrifice. When king for somebody to take charge of raising funds for the window, which finally cost $425 luding a bronze plate with the twelve names it, the committee thought at once of Miss rriett E. Cooley, who had shown her ability ing the war by organizing a Red Cross branch the community with one hundred members.

Her Appeals Met with Prompt Response

Miss Cooley's keen interest overcame her fear the magnitude of the undertaking and she set it with a will. First, she interested the exvice men who did what they could to help. sonal letters to the different banks and promt people in the country brought her some ll and some large checks. A church supper evening, with the hearty help of the ladies, red one hundred dollars for the window. Then a cost of two dollars she had a hundred postal rds printed asking for the donation of a handchief for a handkerchief sale. These cards re sent far and wide to her friends and netted 5. She got up a play and after giving it twice d enough funds, with the personal contributions made from time to time, to pay everything full for the window.

The basement of the building was completely ttied for a social center. A well equipped chen, long table tops and tressels made it easy provide the "eats" when the occasion demanded. electric lighting plant in one corner explained there were so many lighting fixtures around with never a sign of electric wires in the surrounding country. A good sized stage across the rear of the basement told of the joyful times when old Santa Claus came down the chimney, or the older folks had an entertainment. Best of all, a big heater stood guard to keep everybody warm and contented when it was good to be indoors. Indeed, right then and there I wished my lot had been cast in that community.

When Two Churches Joined Hands

The why of such a fine building was explained by the fact that two churches in the vicinity had joined hands and built it on the main road instead of trying to force people to come to the original places of worship which had been left by the improvement of roads in rather inaccessible places. A third church, in the four and a half mile radius, was asked to join in these enlarged opportunities but is said to have refused unless the new building was placed on the site of its present one on the by-road a mile from the main highway. The building of one of the cooperating churches was to be sold and the other one kept as a funeral chapel in the large cemetery surrounding it.

The Webster Community Church, Harford County, Maryland.

Completely furnished, the Webster Church cost $30,000 and up to the time I was there $22,000 had been paid on it, altho money had never been mentioned from the pulpit. The congregation was using the envelope system of contributions and plans were under way for installing the budget system for expenditures. All the funds of the church were handled by the church treasurer.

The building committee consisted of six of the nine trustees of the church and they worked in close harmony with the building superintendent. Once a month the whole congregation met in business session with the pastor, Reverend Sutcliffe, as chairman, to consider and pass upon all new projects before they were put into operation Rev. Sutcliffe believes if this were done in all church organizations there would be less friction than there is now. "No Bosses," was one of the slogans of the Webster Church and it went a long way to keeping peace and harmony during its building.

A Church Where People Like to Go

While this church is called a Community Church it is Methodist Protestant in doctrine. It is known as the "Welcome Church" and it has been nothing unusual for people to travel seventy miles to attend its services which are held every Sabbath morning and evening. When I was there the average attendance at the morning services was 125 while the evening services, which were preceded by a quarter-hour song service, had an average attendance of 150. Holy communion was administered the first Sunday in each month as it is in the city churches. The surrounding good roads have done much to make the large attendance possible.

Much of the success of the Webster Church has been due to the enthusiastic interest, faithful work and loyal devotion of its pastor, Reverend Milton W. Sutcliffe. He has taken a broad view of his responsibilities and no one who knows of the good he has accomplished in his community would trade him for a preacher who merely "preaches."

To secure flowers for the church altar each Sunday and on special occasions the women organized a Flower Guild. They solicit flowers as memorials, birthday offerings, thanksgiving for delivery from sickness or gifts. After the evening service the flowers were distributed to the sick. This was another way of making a church contact with the people of the community. The Guild also was given charge of the communion linen and the arrangements for that service.

The athletic side of the boys' and girls' lives has not been overlooked by the church. With the assistance of a former University of Maryland student, a baseball team, completely equipped and uniformed, was placed in the Harford County League and made a good record. This has been the means of bringing and holding to the Sunday School many young men, and it also influenced a number of the young ladies to come. A tennis court back of the church has been the scene of many lively friendly contests. Lockers for the safe keeping of athletic materials were built in the church basement.

Maybe it has occurred to you that your church is not as active as the one I have described. If so, you will be interested in reading a short poem which Rev. Sutcliffe wrote and printed in one of his recent church directories:

IT ISN'T THE CHURCH, IT'S YOU

If you want to work in the kind of a church,
 Like the kind of a church you like,
You needn't slip your clothes in a grip
 And start on a long, long hike.

You'll only find what you left behind,
 For there is nothing that is really new.
It's a knock at yourself when you knock the church.
 It isn't the church, it's YOU.

Real churches aren't made by men afraid
 Lest somebody else goes ahead.
When everyone works and no one shirks,
 You can raise a church from the dead.

And if you make your personal stake
 Your neighbor can make one, too,
Your church will be what you want to see—
 It isn't your church, it's YOU.

Possibly you have noticed I have written nearly all of this story in the past tense. It is not merely because it was nearly a year ago that I was there, but because shortly after my visit the church was completely destroyed by fire.

But just a few weeks ago Miss Cooley wrote me another letter saying, "We have now finished erecting another community church and if you are in this part of Maryland again we would like to have you stop and see it."

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

Write it on your heart that every day is the best day of the year —Ralph Waldo Emerson

Feed for Game

FARMERS who live in sections where game is abundant may make an agreement with the Game Commission to plant certain crops for the feeding of wild game. Besides the pay received for such planting, farmers who have land situated near forests or other game haunts, would also benefit by having a place where game could feed and thus keep them off other crops. Grain for such purpose may be corn, broom corn, or buckwheat, according to the kind of game prevalent in the neighborhood. Full information and copy of contract can be secured by writing the Secretary of Game Commission, Harrisburg, Pa.

Fair Comparisons

MANY people seem to take a morbid delight in comparing prices and net income of the present with the years previous to 1914, and because they find that prices are higher and the net income frequently lower they jump to the conclusion that somebody is systematically robbing them. We well know that the average human being has a very short and imperfect memory. In the first place, most people, including farmers, were no better off on the average during the ten years previous to 1914 than they are now. Those who can truthfully recall their personal experiences for twenty years previous to the war will remember many years of mighty poor sledding. The trouble with most Americans is that they have a vivid memory of the two or three flush years, 1918 to 1920, but think it was a pre-war experience. Another thing they forget is that during the past ten years they have added many things to their mode of living so that their standards are higher and much more expensive than ten years ago, hence the same income does not meet their present needs.

This is not intended as an excuse nor an apology for the inequalities that actually exist. It is true that the wages of laborers and the profits in business have been raised to meet the increased expenses of living while the prices of farm products have not been proportionately increased. The chief reason is that the supply of farm products in relation to the demand has been equal to or in excess of it, while the supply of labor has been less than the demand. Another reason is that farmers generally have left the selling of their products to other hands, while the producers of manufactured goods have attended to the creation of their own selling organizations.

We present this merely as an endeavor to create a better understanding of the economic changes that have taken place recently and to bring home to farmers the fact that the work of improvement must be done by themselves in the light of the changed conditions on the farm as well as in the cities.

Higher Postage Rates

NO DOUBT many of our readers were first made acquainted with the increase in the rates of many classes of mail which went into effect on April 15 when a post card or package was left in the box because of insufficient postage. While many of the changes will not affect farmers directly, still there are a few of them which all should know.

A post card, that is any kind except the old-fashioned postal card, requires a two-cent stamp. Open circulars that formerly went for a one-cent stamp now require a one cent and a one-half cent stamp. The registration of a letter or package costs fifteen cents instead of ten cents as formerly, and if a return receipt is desired three cents additional must be paid. The rates on parcel post mail are also increased. The purpose of the increased rates is to pay the increase in the salaries of postal employes granted by Congress.

The German Election

A GOOD many people, especially the French, are alarmed at the outcome of the German election which was held on April twenty-sixth. Von Hindenburg, who was perhaps the strongest member of the old military autocracy, was elected president by a large majority. The fear is that he will reshape the affairs of government so as to reinstate a monarchy, and also bring back militarism. It is, of course, unknown what the actual results will be, but the election of Hindenburg is logical from a psychological point of view. The Germans have passed thru four trying years in which their national affairs have been in a practically bankrupt condition. The mental attitude towards a republican form of government was not yet fully established. They are anxious to re-establish themselves "in the sun." Von Hindenburg was an idol in the old days and known as a man of iron. It is perfectly natural that many Germans should turn to such a man in the hope that he would have the ability to pull them out of the national difficulties in which they find themselves. There is nothing in his speeches which gives ground for suspicion that he will be a reactionary in government, nor try to bring back military rule.

A Governor's Job

IT HAS become an almost impossible task for the governor of a state in which there are large cities to fill the office to the satisfaction of city people if he pleases the rural population, and vice versa. The conditions and needs of one are different from the other. It may also be said that the moral and ethical standards differ quite as much as the economic ideas of the two groups. We are not here making any comparisons of the standards of the two classes, but we are emphasizing merely the impossibility of a governor's pleasing both in his executive actions. It is to be regretted, however, that the big city dailies which should have at least a state-wide vision of state matters should be local and partisan in their discussion of affairs. So long as the big cities are a part of the whole state they should try to adjust themselves to the common rule of the state and not try to break the governor and the legislative bodies for they, the cities, cannot dictate.

Washington Letter

MUSCLE SHOALS.—A number of leading business men, heads of large corporations and organizations, university presidents and engineering bodies are being asked by the President's Muscle Shoals Commission to give their views as to what should be done with the power and nitrate plants at Muscle Shoals, Ala. They are also being invited to appear before the commission.

FARMERS' ASSOCIATIONS.—The 542 farmers' associations listed with the Department of Agriculture in 1915 had 651,000 members, and the 10,326 associations listed this year have not less than 2,500,000, an increase of 1,849,000 members in ten years. Associations handling grain, dairy products, fruits and vegetables, cotton and tobacco are in the lead, but there are sixty-four associations with 45,000 members handling poultry and eggs, 112 associations with 45,000 members marketing wool and forty associations with 23,000 members marketing nuts. Numerical gains in membership from 1915 to 1925 for the cooperative associations in the several geographic divisions ranged from 31,000 for the mountain states to 463 for the west north central states.

PESTS FROM ABROAD.—The Federal Horticultural Board estimates that from eighty-five to ninety per cent of the real insect pest problems in this country are due to foreign importations. These unwelcomed foreign immigrants are costing the country, and the farmers especially, millions of dollars to keep them under control and to prevent the entry of others from foreign lands. The Federal Horticultural Board is using the utmost vigilance to keep these insect pests from entering this country.

CORN THE MOST IMPORTANT FARM CROP.—Corn is the most useful and important product of American farms. The value of the corn crop to the farmers of this country is greater than that of any other crop. In the nine of the last twelve years it has been greater than the combined values of wheat and cotton. In eight of those years the value of corn has been greater than the combined values of all cattle and swine produced for slaughter. The average value of corn rose from $1,577, 000,000 annually during the pre-war period 1910 to 1914, to $3,024,000,000 per annum from 1915 to 1919, and fell to $1,303,000,00 in 1921.

In a compilation relating to uses and products of corn, prepared by grain investigation specialists in the Bureau of Agricultural Economics, more than 160 uses of corn are enumerated ranging from buttons to printer's ink and telephone receivers.

Over four-fifths of the crop is consumed on farms, only one-fifth entering into general trade channels, and some of that is shipped again to the farms. But while corn entering commerce is only a small proportion of the entire crop, the crops are so large that the movement of corn in the channels of trade is second in volume to that of wheat.

All parts of the corn are put to some useful purpose. The value of corn cobs per ton for fuel is about half that of coal. As the corn cobs are already on the farm, in the local elevators or other convenient points in the corn belt, they require little time or expense in transportation, and therefore are actually worth more than half coal prices per ton for fuel on farms and at country stations where the quantity available is large. The cobs may also be used in the production of a substitute for hard rubber, and also in producing furfural, a motor fuel substitute.—E. E. Reynolds.

Harrisburg Letter

GOING TO THE FARMS.—Thousands of Pennsylvania farmers will be enabled to make their own reports on their crop acreages to the joint federal-state crop reporting service under a plan just being worked out whereby blanks will be issued for individual reports. These blanks will contain eighteen items and it is the idea to have the farmer make returns himself. The report will enable more cooperation than has hitherto been possible in obtaining basic facts. The list will include total acreage, corn, wheat and other grains, potatoes and hay together with a statement of plow land in pasture and plow land idle.

NEW APPLE BUSHEL.—Under provisions of a bill just approved by the Governor the bushel of apples will hereafter be forty-five instead of forty-eight pounds. This is the only change made in the commodities act this year.

NEW LAWS FOR DRAINS.—Governor Pinchot has signed a bill providing the State Highway Department shall have authority to enter upon lands or enclosures to cut or open drains to remove water from roads. The act confers wide powers and requires counties to pay the damages arising from cutting of drains or ditches. In some sections of the state owners of lands refused to give right for drains to relieve conditions on roads and there were controversies and in cases recourse to law. The new act puts the state authority over all lands in the hands of the Highway Department for the purpose of drainage. One of the other bills signed would allow county commissioners to build or rebuild bridges in emergencies without waiting for grand jury action.

MAY LIGHT VILLAGES.—Way has at last been found for lighting of villages in first class townships so that the cost will fall only on the properties really benefited. An act just approved provides the commissioners may, on petition of a majority of owners of the feet frontage along any highway in any village, contract for lighting and assess the cost against properties abutting on the highways, including factories and business places.

BOROUGH MARKET ACT.—An amendment just made to the borough code will permit boroughs to establish market houses, something a number of the smaller municipalities have been seeking to do for some time so as to obtain benefit of produce from nearby farms on regular days. The new act authorizes the construction and management of market houses.—Hamilton, Harrisburg

New Jersey Letter

SPRING WORK WELL ALONG.—Favorable weather thruout New Jersey has advanced spring work in practically all areas. Early spring vegetables are moving forward from the southern counties in fair quantities. Planting of seasonal crops is well along and pastures in the northern part of the state will shortly be in condition for early pasturing of livestock. Roads are in better condition for the season than last year and many new contracts are tying up important highways with each other. General farm activities thruout the state are fully two weeks ahead of last year.

GLOUCESTER CHICK BUSINESS—Commercial hatcheries in Gloucester County and the general extension of poultry interests are bringing the county to the front as a poultry producing area. Development of the hatchery business in the county has encouraged the increase of flocks. Some of the old, well-known raisers of baby chicks report that they have been unable to supply all orders for the quantity of stock desired and some of the poultrymen under contract have not been able to meet the demand for eggs of high producing stock. More interest in flock testing thruout the county is stimulating the quality as well as the volume of business.

NEW HERD TESTING PLAN.—Dairymen in several of the northern counties are including their good grade milch cows in the cow testing work, as well as purebreds which previously have been the only animals to receive the regular advanced registration test. The plan for a more general testing, including grade animals, is the result of activities during the season by the State Extension Service. The Dairy Science Association and the major breed associations have approved the plan. By including all cows in the tests instead of only the purebreds, New Jersey dairymen are reducing the year's test cost per animal.

MOVE TO LIMIT VARIETIES.—Market gardeners in Atlantic County supplying Atlantic City and other seashore resorts with produce are limiting the varieties of trucking crops to a small number of known proven sorts. Four varieties of sweet corn furnishing a supply from early to late in the season have been approved in place of a large number of miscellaneous varieties which have been grown in the past. Three varieties of New Jersey cantaloupes grown by Atlantic County growers have taken the place of twelve or more varieties which were commonly grown several years ago. The same policy is to be put into effect for tomatoes, cucumbers and other seasonable vegetables. Such standardization in the choice of varieties is being considered in other areas, particularly in the tomato canhouse districts thruout southern New Jersey.—B.

New York Letter

GOVERNOR CLEARS DESK OF BILLS.—Five days ahead of the thirty-day time limit, Governor Smith has cleared his desk of more than 700 bills left for his signature. Of the New York City bills he vetoed ninety-nine and signed six. The number of new laws receiving his approval included the Cole bill, the most important farm law yet passed, granting increased salaries to all teachers of the state, reducing taxes in rural school districts, and improving the school law in several important points. This consummates a four-year study of rural educational needs, and is of much interest and satisfaction to farmers, tho it does not include all they asked for.

SCHOOL SETS TREES FOR SELF SUPPORT.—The Marathon school board is to buy sixty acres of land for reforesting, the pupils to do the work and reset the dead trees each year. It is expected that eventually the expenses of the school will be paid by the trees.

EMPLOYMENT ON INCREASE.—The annual spring analysis of the business situation made by the National Association of Manufacturers shows fifty-one per cent of these industries report the volume of business higher than a year ago, some reporting increases as high as 100 per cent. Wages are high, production is healthy, and employment on the increase. With competition keen, consumers' prices are lower. General prospects in this field are more stable and prosperous and that means unusual confidence.

GRANGE PROSPEROUS.—Twelve new Grange halls have been built in the state in the past twelve months, costing from $1200 to $10,000, and a half dozen more are nearly completed.

MILK OUTLOOK GOOD.—The April price of $2.80 per hundred for Class 1 milk will be continued as far into May as possible. One-half the overhead expenses of the Dairymen's League have been eliminated by the new business policy and a new and vital home department has been added and will be worked to the limit to bring the membership into closer relationship with the organization. Miss Vera McRea has charge of the new department and has already begun work in two districts. The dairy outlook is better than in years.—M. G. F.

Save the surface and you save all

It Lasts

It is unnecessary to further delay that much needed painting job—Get in touch with the *Lucas* dealer and arrange through dealer and the painter for protection against further property loss, on convenient time payments. To provide a dependable and economical protection against weather, select *LUCAS Tinted Gloss Paint.*

There is a false sense of security in the appearance of some painted surfaces. It is unwise to delay painting until the old paint coat has worn bare. Good paint properly applied on a sound surface, always wears out by chalking or powdering.

If you can rub down to the bare surface, it is time to repaint. The weather is getting through to the surface and deterioration is setting in.

If you use *Lucas* Tinted Gloss Paint on your next paint job you will find true economy in its greater lasting quality.

IT COVERS
more square feet per gallon and more thoroughly hides the surface, due to finer grinding of materials, a higher percentage of pure linseed oil, and *LUCAS* superior methods of combining all ingredients into one perfectly finished product.

IT BEAUTIFIES
and its beauty lasts because of its high gloss and clear, perfect shades, made with pure tinting colors of *Lucas'* own manufacture, possessing maximum permanency.

IT LASTS
longer because it is made of highest grade materials, carefully selected, scientifically combined by skilled workers of long experience.

IT PROTECTS
positively because its smooth, glossy surface is resistant to weather. Its elasticity prevents checking or cracking during temperature changes, consequently preventing moisture, the cause of decay, from getting to the underlying surface.

IT IS ECONOMICAL
Its GREATER COVERING CAPACITY reduces the cost of application.
Its GREATER LASTING QUALITY decreases the cost per year of protection.
Its GREATER PROTECTION saves costly repairs.
Its GREATER BEAUTY increases the value of your property, reflects prosperity and radiates happiness.

You can preserve your property on convenient time payments. Ask the *Lucas* dealer in your community or write us for name of nearest dealer.

OUR FARM

Where an Editor Works and Thinks

WHILE sitting on the potato planter last week, keeping the revolving disc filled with just the right number of pieces (or as nearly so as possible), I got to wondering what life must be like to those who know almost to a certainty just what they will be doing next week and next month and next year, and just what the results of their work will be. Here we are planting good, certified seed in a well prepared alfalfa soil and applying about 800 pounds of a 4-8-6 fertilizer to each acre. It is a very simple and reasonable act to figure out a yield of at least 300 bushels per acre—providing we do the rest of the work as well as that which is already done.

✦ ✦ ✦

BUT unlike the thirty-dollar-a-week clerk or bookkeeper we have not the least idea how much money we shall get for the potatoes next fall. The yield may be anywhere between 100 and 400 bushels per acre, even tho we do our part in the best manner we know. And we haven't any idea as to what we shall receive for them. The price may be anything between sixty cents and one and one-half dollars per bushel. Of one thing we are reasonably certain: If our crop is typical of the potato crop in general, the lower the yield the higher the price will be. Sounds queer, doesn't it?

✦ ✦ ✦

BUT these uncertainties add zest to farming. Nothing is so uninspiring as certainty and nothing so monotonous as regularity. The clerk and the bookkeeper get their kick out of life by spending in outside interests the money earned at drudgery. The farmer does not need to go outside his own business to receive all the kick he wants. He does not need to sit around a table at night with pictured and spotted cards in his hands in order to satisfy his gambling instinct. I thought over these things as I rode back and forward along the long rows of the potato field, and when the rain came up within an hour after finishing and I realized the uncertainties of the long season ahead I rejoiced in the thought that "Well begun is half done."

✦ ✦ ✦

WE FIND that the hard freeze of three weeks ago was too much for the most forward strawberry blossoms. However, it is only the central bud of the cluster that is killed. The central bud always comes out first, and while these buds had not yet opened they were sufficiently advanced to be injured by the freeze. The rest seem to be all right and the promise of a full bloom is good. The young peach trees are not opening all the blossoms that were set last fall. Possibly the hard winter was too much for them. While we prefer that two-year-old trees use discretion in the matter of bearing, yet we are wondering whether the cold of winter did any lasting harm to the trees themselves.

✦ ✦ ✦

THE planting of black raspberries has become a very questionable enterprise in late years. The disease called anthracnose has become so prevalent in the raspberry growing sections that it threatens to wipe out this fruit. We set 1000 plants this spring as a trial but we are not yet counting the berries nor the profits. Eternal vigilance in cutting out infested canes, together with timely spraying with Bordeaux will help to keep the disease in check, but no certain control methods nor process of elimination are known.

✦ ✦ ✦

THE STUDY of plant diseases and their control is one of the most important branches of modern farming, especially in the fruit and vegetable growing lines. So important has it become that one may not hope to succeed without a definite knowledge of what to do and how to do it. I have more books on the shelf treating on plant diseases and pests than the old family doctor of my boyhood days had on human ills and cures. I do not know whether the wild berries which we gathered years ago were subject to disease or not. We never looked. The brambles grew in abundance for a few years in the lumber slashings and nothing was required except energy and patience to get all the big, luscious berries one could carry. It was not a serious offence in those days for a worm to take up his residence inside an apple. We accepted it as a joke and ate around him. There was no known way of preventing his entrance.—R. P. K.

Use of Sweet Clover

(Concluded from last week)

THE old question about sweet clover, "Will stock eat it?" is almost obsolete; the only one now is, "Will they eat all of the thick stem?"

It is the observation of our farmers who grow it that stock eat it as readily as any of the other clovers and will eat all of it except the very heavy stems. Its feeding value per acre is almost double that of any of the other small clovers and by curing in piles or weather cocks, it retains a beautiful green color and frequently the stock prefer it to other clover hay. The yield per acre is about twice that of alsike or medium red clover.

For the best hay it should be cut just before the blossoms appear. However, by letting it come into full bloom you provide excellent bee pasture and secure a larger yield of hay, altho the stems become harder and will not be so readily eaten by the stock.

A Very Hardy Plant

Sweet clover is an exceedingly hardy plant and is the first clover in the spring to start a rapid growth. It is always two or three inches taller in early spring than any of the early clovers and is not so easily injured by the frosts. It may be sown anywhere for general pasture purposes. It is less dangerous to livestock than red clover because it is less subject to mildew and doesn't bloat cattle or sheep.

For hog pasture it is one of the best crops as the plant continues green all summer and can be grown on almost any kind of soil. It will grow in woodlots where brush piles have been burned or at the many unusual places about a farm where we cannot secure a good stand of the small clovers.

For Bee Pasture

The value of sweet clover for bee pasture is just beginning to be realized. In parts of Kentucky and some of the southern and middle western states it has been grown for a number of years largely for its honey producing qualities. I have seen bees work on it from the latter part of June until early in November.

Any person interested in the production of honey will do well to scatter the inoculated sweet clover seed along the road-side, along fence rows, along railroad grades or anywhere. We have no bee pasture in this country that covers so long a period and provides stores of honey for the bees during winter. The honey gathered from sweet clover is light in color and of very excellent flavor, and is as salable on the market as any of the light colored honeys.—J. S. M., Somerset County, Pa.

Farmers' Bulletins

MORE than 10,000 bulletins and circulars were sent to farmers and others who asked for them by the Pennsylvania Department of Agriculture during the first three months of 1925.

Among the most popular bulletins are the following: No. 120, Apple Tree Caterpillar; No. 261, Sour Soils and Liming; No. 369, The Apple Industry of Pennsylvania; No. 371, The Cigar Tobacco Industry of Pennsylvania; No. 390, Japanese Beetle in Pennsylvania; No. 392, The Mushroom Industry of Pennsylvania; No. 393, Problems in Marketing Pennsylvania Wheat; and No. 394, The Pennsylvania Vegetable Forcing Industry.

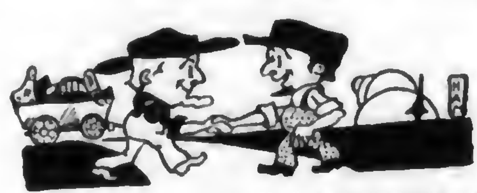
The Department sends its bulletins and circulars free to all farmers in the state who ask for them. A list of all available bulletins has been prepared and will be mailed to those who ask for it. It may be secured by addressing the Pennsylvania Department of Agriculture, Harrisburg.—J.

Tom—Gladys, on what grounds does your father object to me?"

Gladys—On any grounds within a mile of the house.

THE CHEERFUL PLOWMAN

He's Back Again



HE'S back again, the dear old boy, he couldn't stay away; you should have seen the tracks of joy across his face today!

Two years ago he leased his farm, betook himself to town, where free from toil and far from harm he hoped to settle down. "It went all right at first," he said, "I felt so light and free; I rose at six or stayed in bed, whichever suited me! I pitied all the farmers then, I said, 'Poor guys! Poor guys! They can not say, poor driven men, when they shall sleep or rise.'

"But soon I found I was too free; I had free time to burn; my freedom faced and sickened me wherever I would turn. I sauntered at a leisure gait down to the corner store, and there I loafed and sat in state, then sauntered on some more. I wandered to the blacksmith's shop, and watched him blow the coals, then chatted with the village cop about unruly souls. I got the mail nine times a day, then read and read the news, and sat around in aimless way and aired mistaken views. I had a little garden plot, and that helped out a bit; I would have died of crumbling rot had it not been for it!

"My tenant's time is up today, and see, I'm on the spot, with all my goods upon a dray and horses on the trot. I'll soon be back in my old niche, at work at my old task, with chance to plow, and hoe, and pitch and that is all I ask!

"No leisure life for me again, no loafing days for me! The jobless man is free, amen,—but too ding-busted free."—J. Edw. Tufft.

Plant a Tree

WHEN the President of this here land of the free (that's us men), and home of the brave (our wives), sets his hand and seal thereunto on a proclamation, he don't mean maybe. He's askin' all of us to observe American Forest Week and take time off from our regular work, if we've got a job, and plant a tree.

It's funny how much ruther a feller would chop down or burn up a tree then plant one. It's the only kind of hard labor a man picks out voluntary when he could pick the easier job of plantin' a tree. Something seems to try to keep him from plantin' trees. He hates to do it and he don't know why, but give him an ax and he'll chop at 'em all day like a beaver, or let him roam around in the woods and build campfires and smoke cigarettes and he don't care how far his fire spreads.

Just o' Wonderin'

I been kind o' wonderin' whether that theory of evolution hain't got something to do with this. In one of our classes we has lectures on inherited tendencies, and reversions to type. Sometimes I think Bryan is wrong—not politically, but on this evolution business.

Maybe we did spring from monkeys and the sight of a tree brings it all back to us, how we used to hang head down and swing from the limbs by our tail and deep down in the sub-basement of our brain something stirs up our fighting instinct ag'in trees. We feel ashamed of our ancestors and the old home and we want to chop down every tree we come to. That's what they call the simian complex in our psychology class. Let's furgit that we've been monkeys and be men now and plant a tree.—Thomas Jefferson Putnam, Specialist in Rural Devilment, Colorado Agricultural College.

Care of Bees

REPLYING to Mrs. E. M. C. who has a swarm of bees that have made their comb and honey in the upper part of the hive. She does not state what kind of a hive the bees are in, whether it is a movable frame hive or just a box.

Naturally, the bees commence work at the top of the hive and if these bees are in a movable frame hive with a super on it Mrs. C. made a mistake by putting on the super before the lower or main body of the hive was filled.

If it is an ordinary box and is suitable for accommodating the bees, I would let them continue work and fill the hive full. If it is desirable to transfer them to a frame hive I would do this about the first of June. Would fasten as much of the comb that contains brood as I could in the brood frames and set them in the hive and drive the bees into the new hive. The surplus honey I would save and the brood that I could not fit into the frames I would remove and destroy.

Leave Alone If Possible

I would prefer leaving the bees in the present hive if it is at all suitable.

If the hive is small a box can be fitted on top for surplus honey to be stored and the bees allowed to work where they are. There is always some risk in moving bees to frame hives if the comb has to be broken. Such work should be done when there is plenty of bloom for bees to work on.—A. J. L.

There is no man that imparteth his joys to his friend, but he joyeth the more, and no man that imparteth his griefs to his friend, but he grieveth the less.—Bacon.

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser

Manager Pomona Gardens, Newark, Delaware

A Shady Garden

Part of our garden is quite shady, but do not like to have the ground lie idle. What could I plant? Would cucumbers do reasonably well?—Mrs. H. R. B., Lycoming County, Pa.

If the shade in your garden is caused by trees, you can expect little good from any vegetables planted because the tree roots are likely to rob the soil of water and plant food. If it is a building or fence that shades the ground part of the day, you can grow good parsley, and fair leaf lettuce. Parsley makes an attractive border, and sometimes it is much in demand in fall and winter. Perhaps you could make a wide bed of it and cover it with a glass sash next fall, having the leaves for use in cold weather.

None of the other vegetable crops are likely to pay for the work put upon them. The root crops will grow slowly and finally make roots, but the edible parts are apt to be tough and strong because of the slow growth. Cucumbers are not likely to do well in the shade. In the fall, if it is a tree that makes the shade, you could plant spinach seed for maturity after the leaves drop.—W. C. P.

Asparagus Culls

Asparagus culls like these make good soup if a market can be found. Some growers pack them loose in fifteen pound baskets for sale to hotels and restaurants.

Head Lettuce for Summer

What varieties of head lettuce are best for summer use? When is the rght time to plant them in this county?—L. P., Montgomery County, Pa.

Altho several varieties of the Iceberg type are said to make solid heads in summer, I have never succeeded in getting good heads after July 1 from any of them. Farther north, on muck land, Big Boston is grown commercially in summer; in your county in a normally hot summer I do not think you can depend upon Big Boston to escape tip burn and seed making, which are the two chief troubles of summer lettuce. The finest summer heads I ever saw were of the Brittle Ice variety, which grows very large and is so tender it will not stand shipment. It is strictly a home table or local market variety.

Any kind of lettuce which you wish to try is more likely to thrive if planted in rich garden land where you can apply water frequently. In the open field all kinds are likely to fail.

There is no one time that is best to plant seed for summer lettuce. The thing to do is to plant a little seed every two weeks in a seedbed, and transplant the plants when they have about two true leaves. This plan will give you a succession of heads if the weather allows.—W.C.P.

Plants Grow Slowly

IT IS a common complaint among my neighbors that early planted vegetables have grown very slowly this spring, and the question now is, how to hurry them along.

If the land has been well fertilized or manured before planting, there will be nothing gained from additional fertilizer. The days and nights have been rather cool for the last three weeks, and it is low temperature and not need of plant food that has restricted growth. I think that many a young plant that seems to be making no progress has been making roots underground, and that when days become warm big top growth will follow. This is an advantage in every case; if the roots can be made first, there is less danger later from extremely hot weather.

It is thought by some gardeners that slow growth makes plants more easily injured by insects and diseases. That may be so, but we have as compensation the longer period when we can work the soil close to the plants, so that weed control ought to be easier and more efficient when plant growth is slow.

When plants grow slowly because of lack of sunshine or because of very dry weather, it will not help to try to hustle them by applying nitrate of soda. Nitrogen is only one of the things plants need, and if others are lacking extra nitrogen dces no good. If long continued rains accompany the cloudy weather, extra nitrogen is likely to do more harm than good. The plants then need sunshine to enable them to make carbohydrates, and they cannot utilize nitrogen effectively until they are supplied with carbohydrates.—W. C. P.

The Canker Worm

CANKER worm moths are appearing in large numbers in many western counties of the state, according to T. L. Guyton, chief entomologist, Pennsylvania Department of Agriculture. The female moth is a wingless creature which after mating crawls to the tops of trees and lays a mass of eggs. These egg masses are usually found on the smaller limbs of apple, elm and a few other host plants, forming a characteristic cluster. Each egg is somewhat vase-like in shape.

Apple orchards which are given the regular sprays of the apple spray schedule will escape injury since the larvae are very easily killed with poison, Mr. Guyton states. One application of poison put on at the time of the petal fall of apples is usually enough to control canker worms. This spray should contain one and one-half pounds of powdered arsenate of lead to each fifty gallons of lime-sulphur solution.

The cultivation of orchards will do much to lessen the number of moths to appear next year since the greater part of the summer, fall and winter is spent by the insect in the ground in the pupal or inactive stage.

The wingless moths may be caught in sticky bands placed about the tree trunks. These bands must be in place quite early in the spring. The best protection for orchards, however, is thoro spraying with arsenate of lead at the strength indicated.

Apple Receipts

RECEIPTS of apples at fifteen important Pennsylvania markets ing 1924 were 6873 cars, over cars less than were received dur- the previous year, according to udy just completed by the Bureau Markets of the Pennsylvania De- ment of Agriculture. The re- ts from other states amounted to 3,000,000 bushels as compared h a state production of 10,855,000 hels in 1923 and 7,267,000 bush- in 1924.

Philadelphia received 2997 cars le Pittsburgh unloaded 2799 cars. e two markets used eighty-four cent of the total quantity for the een markets studied. Other cities iving over 100 cars each were nton, Altoona and Wilkes-Barre. er centers of population which ended largely on local supplies Allentown, Bethlehem, Easton, e, Harrisburg, Lancaster, Reading, Williamsport and York.

ylvania Fourth in Own Markets

Seven states including Pennsyl- ia furnished ninety-four per cent the total receipts. Five of these adjacent and with Pennsyl- have supplied sixty-six per of the total supply for each of past three years. Since 1921, Keystone State has ranked third source of supply, but in 1924 it lded this position to Virginia. The portant sources and number of s received from each in 1924 were York 2496, Washington 1982, ginia 652, Pennsylvania 519, Del- re 387 West Virginia 217 and ryland 189.

Receipts from New York show a dual decline over the entire four rs for which records are avail- le. Washington apples seem espe- lly popular in Philadelphia, that rket receiving fifty-eight per cent the entire total from that state, Pittsburgh reported only twenty- per cent. On the other hand, tsburgh used fifty-nine per cent all the New York stock, while ly twenty-five per cent were un- ded at Philadelphia.—J.

Spray Service Plans

MOST all of the fruit counties are to be favored this year with an le spray service under the direc- of the extension entomologists d plant pathologist of the Pennsyl- ia State College. Three groups of nties are included in the apple ying work; one centers around Philadelphia, another around Har- urg, and the third about Pitts- g.

A spray service letter will be sent these centers to the counties g nearby. Growers in each coun- will receive this service from their nty agent.

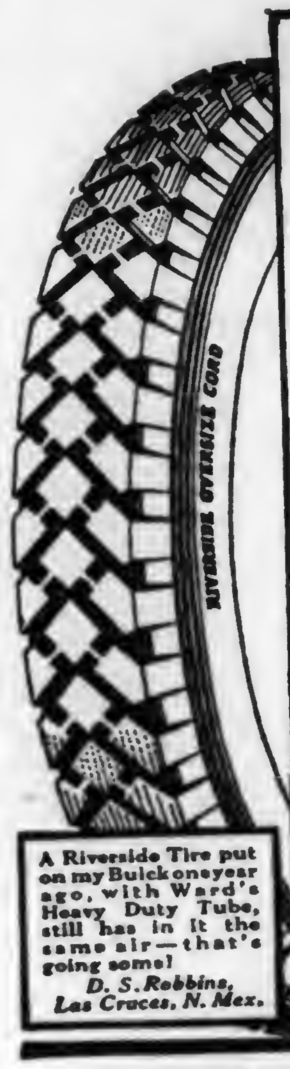
The counties not receiving the di- spray service will get a spray ice thru a demonstration in each nty. Information will be sent out the demonstration is started.

A Large Enrollment

DURING the past year over 4000 students located in various ties of Pennsylvania were en- ed in the correspondence courses ered by the School of Agriculture the Department of Home Econ- ics of the Pennsylvania State Col- ge.

At the present time the most pop- r courses are those dealing with ltry raising. Courses in vegetable dening rank second in popularity owed by home floriculture, small its, home fertilization and man- . In home economics, cooking rses are most in demand, with me furnishing, sewing, canning, preserving following in order.

No charge is made for enrollment these courses and the lessons are t without cost to any student who res to take up the work.—A.L.B.



Riverside
Oversize Cord TIRES and TUBES

Quality Equal to the Best at Prices Very Much Lower

Forget that the price is low. Just consider *quality* alone. Compare service and mileage, and you will find that Riverside Tires give you all you get in any tire—give you just as long mileage, just as satisfactory service.

Riverside Tires are *not made to sell at a low price.* They are made *to be as good* as any tire. They cost just as much to make, just as much for fabric and rubber, the difference in price is a difference in *profit.* They cost less to sell.

Ward's is the Largest Retailer of Tires in the World

Quality equal to the best at a price much lower than even a fairly good tire costs has made Ward's the largest retailers of tires in all the world. We sell 5,000 to 6,000 tires per day. Hundreds of thousands of people use nothing but Riversides. Why not you too? When a Riverside gives you all you can get in any tire, *why pay more?*

Greater Protection Against Skidding

Big heavy blocks of *live* rubber and extra thick side studs and the husky ribs of Riverside Cords grab the slippery roads and are your greatest protection against skidding.

Riverside Cords are thus the safest tire, the most satisfactory tire and the most economical tire you can possibly buy. Why pay more?

For fifty-three years Ward's have sold "Quality" goods only—with a definite "Money Back" guarantee. The reliability of Montgomery Ward & Co. is beyond question. You cannot buy a tire with a better guarantee.

A Riverside Tire put on my Buick one year ago, with Ward's Heavy Duty Tube, still has in it the same air—that's going some!
D. S. Robbins, Las Cruces, N. Mex.

I bought a Riverside Cord tire a year ago and must say I never took it off the rim yet. Used it every day. All my tires from now on will be Riverside Oversize Cords.
Arthur Mueller, Jacksonport, Wis.

I have had two Riverside Cords on my car for fifteen months and they are still good. I use this car every day in the year over all kinds of roads. I recommend Riversides to everyone who wants the most for their money.
F. B. Pinnell, Cuba, Mo.

INOCULATED SULPHUR

It will do your heart good to see a field of Sweets roll out after the soil has been treated with Inoculated Sulphur, manufactured solely by Mechling Bros. Chemical Company of Camden, N. J.

Thank the New Jersey Agricultural Experiment Station and their efficient men for their untiring effort for what they have accomplished for the Sweet Potato Growers of Pennsylvania, New Jersey, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Tennessee, Kentucky, Missouri, Arkansas, New Mexico and California.

Regardless of whether your soil is diseased or not, apply 150 lbs. to each acre to increase yield; if soil is diseased, apply 200 to 300 lbs. to control disease, thus producing all marketable potatoes of fine quality.

Scurf is a disease bacteria in the soil and the best and only sure method for its eradication is to treat the soil by Inoculated Sulphur, a most simple and inexpensive method. The bacteria which produces scurf increases from year to year and it is most fortunate for the Potato Grower that at last an almost permanent method of control has been found.

Diseased sweet potatoes are soft, bitter and unpalatable, resulting in a decreased demand, while sound, healthy sweet potatoes are in large demand always.

Inoculated Sulphur nips the loss at the beginning with a result that the actual yield is increased [illegible] and the marketable Potato increased from 30 to 100%. Your County Agent is a good man to consult. Ask him and he will advise Inoculated Sulphur.

ESPECIALLY RECOMMENDED FOR WHITE POTATOES

A Hampton Roof Will Defy the Weather

Penco Hampton Metal is the greatest of all rust-resisting irons (not steel) and is made from a special formula that has proven its superiority over all others. We have made exhaustive tests for years; soil tests, acid tests, salt air tests and weather tests and know that in Hampton Metal we're offering you the best that money will buy; that is if you measure value by the number of years a roof will last.

For barns, sheds, pump and tool houses, in fact all farm buildings there is nothing else so good. It is fireproof, spark-proof and withstands the blistering sun, blustering winds, beating sleet and driving rains alike and, if properly grounded is one of the best lightning safeguards. Can be put on easily and quickly and may be had in all styles; corrugated, V-Crimp, Pressed Standing Seam, Imitation brick or stone, etc. Needs no paint.

If there's such a thing as roofing permanently it's with Hampton Metal

You owe it to yourself to know more about how metal is made and why some is better and lasts longer than others. If you wish to include measurments of any space you'd like to cover we'll be glad to figure it and give you a price, including nails, and washers, delivered right to your station.

Send for Hampton Booklet and a sample of Hampton metal.

PENN METAL COMPANY, 25th and Wharton Sts. Philadelphia, Penna.

Cut Milk Production Costs with a New Harder Silo

Twelve ordinary grade cows at the Illinois Experiment Station averaged 8,313 lbs. milk in one year, without grain. They were fed on silage and alfalfa. Prof. Savage advises Eastern dairymen to cut production costs by growing more silage and legumes and buying fewer concentrates.

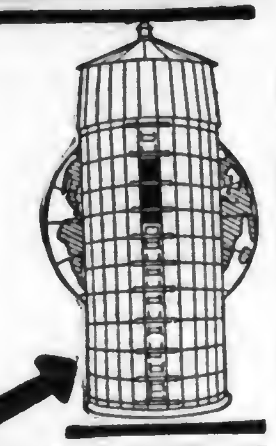
In order to help carry out this money-saving, profit-making plan, we offer the improved Harder Silo with the patented Harder-Victor Front on very easy terms. After a small first payment, your cows will take care of the remaining payments through greater production and lower feed cost. You simply cannot afford to go without a silo when you can get a genuine Harder on such easy terms. Even if you have one silo, you probably need another.

Let Us Send You "Saving with Silos"

We haven't room here to explain all the good points of this strictly high-grade Silo, but we'll gladly send you "Saving with Silos", *free*. It explains the scientific principles of silage making and illustrates the details of Harder construction. Ask also for particulars of our easy-payment plan that makes a Harder pay for itself.

HARDER MFG. CORP., Box E Cobleskill, N. Y.

HARDER SILOS Are Easier to Buy



GLOBE SILOS

Cheapest per ton capacity

The extension roof makes this possible. It is an exclusive feature of Globe Silos. They are made of the best materials, spruce and fir. Heavy matching of walls, double splines, sealed joints and adjustable doors make them absolutely air-tight. Lasts over a generation. Increases value of farm. Most durable, profitable and convenient silo you can buy. Write today for our catalog and price-list; silos, tanks, ensilage cutters, stanchions, etc.

GLOBE SILO CO. Box B, Unadilla, New York

1000 Shot Air Rifle

This air rifle is a repeater, lever action. Magazine holds 1000 light rifle shot, smooth and perfect. Automatic retainer prevents shot from rolling out of barrel. 36 inches long. Gun metal barrel. Walnut stock, dull finish. Given for 3 yearly subscriptions to Pennsylvania Farmer at $1.00 each. Reward No. 212.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

Is This a Good Ration?

I have a herd of nineteen grade Jersey cows. I have millet ensilage, timothy and mixed hay with some clover. For the grain ration I am feeding one pound of feed to each three pounds of milk produced of the following mixture: wheat bran, fourteen per cent protein, 400 pounds; cottonseed meal, forty-one per cent, 200 pounds; old process oil meal, thirty-four per cent, 100 pounds; and corn gluten feed twenty-three per cent, 100 pounds. I give the cows a heaping bushel of the millet ensilage and all the hay they will eat up clean. Can you suggest any improvement in my feeding ration? Also, can you please tell me the difference in feeding value of millet ensilage and corn silage? How can bindweed or wild morning glory and Canada thistles be best eradicated? Do you think thoro discing would be a good way?—G. A. S., Delaware County, N. Y.

The ration you mention consisting of millet silage, and mixed hay, along with one pound of grain to three pounds of milk, ought to be a good ration for your Jersey cows, when you are using the mixture as outlined. This mixture is relatively high in feeding value and one pound of the mixture for three pounds of milk produced ought to fit the needs of your Jersey cows quite satisfactorily.

Analysis about the Same

Millet silage compares very closely with corn silage in analysis. The following table shows the comparative digestible analysis of the two kinds of silage. The table gives the digestible nutrients in 100 pounds of each feed.

Feed	Crude protein	Carbo-hydrates	Fat	Total dig. nutrients
Corn silage ...	1.1	15.0	.7	17.7
Millet silage...	1.6	15.3	.8	18.7

According to the foregoing figures it would appear that millet silage was slightly higher in feeding value than well matured corn silage, altho the difference is very slight and the fact that corn silage would perhaps be more palatable would offset the slightly higher analysis of the millet silage.

Clean Cultivation the Thing

The best way to eradicate bind weed or wild morning glory and Canada thistles is clean cultivation. That is, plant the field to corn or other cultivated crops for about two years in succession, if possible, and keep the crop thoroly cultivated so that every Canada thistle or bind weed that shows its head above the surface of the soil is kept hoed off. Two years of clean cultivation of this sort will practically eradicate these weeds.—A. A. B.

Home Grown Grains

I am raising my own cow feed, corn, oats and buckwheat. My idea is to make up this ration: 400 pounds ground oats, 200 pounds corn meal, 200 pounds ground buckwheat, this combination to be mixed with 100 pounds cottonseed meal and 100 pounds linseed oil meal (o. p.). I have never tried this combination and I would like to know if this idea is all right. If so, how heavy a ration would I be safe in feeding? How long will corn have to lay in crib before it will be safe to shell and grind into feed?—C. D. S., Susquehanna County, Pa.

You are indeed fortunate if you have your own grain, such as corn, oats, buckwheat, to form the basis of the grain mixture for your dairy cows. You are correct in your decision that cottonseed meal and linseed meal are excellent concentrates to go along with home-grown grains to form a well-balanced ration. If your cows are Holsteins, one pound of grain mixture will be sufficient for every four to four and one-half pounds of milk the cows produced. If your cows are Jerseys and Guernseys then one pound of grain will be sufficient for every three to three and one-half pounds of milk. The cows should be fed individually according to their production. A Holstein cow producing thirty pounds of milk daily would be entitled to seven to seven and one-half pounds of grain daily, whereas a Guernsey cow producing a similar amount would be entitled to nine or ten pounds of grain daily.

Depends on the Roughage

The amount of cottonseed meal and linseed meal to mix with your home-grown grains would depend on the character of your roughage. More cottonseed and linseed or other high protein concentrates such as gluten meal, peanut meal, soy bean meal, etc., are necessary if your hay is timothy than if you have clover or alfalfa hay.

For roughage such as clover hay and corn silage or other roughage combination in which part of the roughage is leguminous, a mixture such as the following would be suitable: 200 pounds of ground oats; 100 pounds of corn meal; 100 pounds ground buckwheat; 200 pounds cottonseed meal; and 200 pounds linseed meal. This makes a grain mixture which is relatively high in feeding value, hence one pound of grain for every four to four and one-half pounds of milk will be sufficient for Holstein cows.

Maturity of Corn Matters, Too

The length of time that corn will have to stay in the crib before it will be safe to shell and grind into feed depends upon how well matured the corn was when it went into the crib. The rate of shrinkage depends not only upon the maturity of the corn when husked, but also on the moisture content of the air. When the moisture content of the corn falls to twelve per cent, shrinkage practically ceases. Small amounts of well matured corn may be ground soon after cribbing if mixed with other feeds. However, it is not safe to shell corn and store it in large amounts until spring, when warm weather sets in and the corn thus becomes well dried out. Generally speaking it would be safe to shell corn and store it in considerable amounts after the first of May.—A. A. B.

Owners of Holstein cows will appreciate the explanation given by a lad who escaped from an institution for delinquent negro boys. He worked in a pasture, herding cows. One evening he was missing when the roll was called. After a search he was apprehended and brought before the superintendent.

"How did you make your escape, Mark?" asked the superintendent.

"I jes puts mah arms around the cow's neck," replied the lad, "and was black as the ace of spades, and goes out as a spot."

season.

Mifflin County Holds Sale

Breeders All Interested in T B Eradication

THE Milking Shorthorn breeders of Mifflin County, Pa., held their first consignment sale on April 25th. Twenty-four animals were sold at an average price of $100. As this number included a number of heifers and several young bulls, some of them only calves, the average price is considered very satisfactory. A cow consigned by John K. Yoder, of Belleville, topped the sale at $225.

The sale was held at the farm of Joseph H. Hostetler, Belleville, one of the leading Milking Shorthorn breeders of Mifflin County. Buyers were present from a number of distant counties.

Eight head went to George Wilson, of the Monongahela Farms, Juniata County. Other buyers were: H. B. Ferguson and Elmer Bashore, of Juniata County; Frank Matter, of Dauphin County; Carl Maslo and D. D. Kauffman, of Huntingdon County; Joseph Y. Renno, Russel Stine, Samuel Headings, Frank Kerr and David J. Yoder of Mifflin County. Mr. and Mrs. Frank Morse, Mrs. L. D. May and Mr and Mrs. D. K. Sloan were visitors from the noted Milking Shorthorn section of Bradford County, Mr Sloan acting as pedigree expert in the ring.

Only Started Six Years Ago

Breeders who consigned stock to this sale were: John K. Yoder, Joseph H. Hostetler and Stephen Peachey, of Belleville, and Levi K. Yoder, Irvin Yoder and David Yoder, of Reedsville.

The development of the Milking Shorthorn breed in Mifflin County started about six years ago with the purchase of foundation stock from Bradford County breeders. The men interested in this work organized the first Milking Shorthorn bull association in the United States. All of the consignors to this sale are members of this association, and all have their herds under state and federal supervision for the eradication of tuberculosis.—W.

Dairy Exposition at State

DAIRY husbandry students at the Pennsylvania State College are busily engaged in grooming their entries for the third annual fitting and showing contest which is to be one of the big features of the Penn State Dairy Exposition scheduled for Saturay, May 9. The exposition is being sponsored by the Dairy Husbandry club and arrangements are in charge of the president, James L. Wood, Red Hill, and a committee composed of Robert Eno, Honesdale; G. W. Valsing, Bradford; and C. L. Holbert, Ulysses.

Banquet in Evening

A number of well-known breeders are expected to attend the show and will be guests at a banquet to be held in the evening following the contest. W. F. Shrum, Jeannette, president of the Pennsylvania Jersey Breeders' Association, has agreed to judge the Jersey classes and M. T. Phillips, of Pomeroy, will select the winners in the Guernsey groups. Mr. Phillips is president of the State Federation of Agricultural Organizations and is also a prominent breeder of Guernsey cattle.

A number of valuable prizes have been donated for the winners in the various classes.

Included in the events for the day is a dairy cattle judging contest which will commence at 10.00 A. M. This contest is open to all students and judges will be selected from visiting breeders. After the fitting and showing contest a mock sale will be staged. A clean milk production contest is also being arranged.—A.L.B.

Motherless Lambs

MOTHERLESS lambs may be successfully raised by hand but often the value of the necessary time and milk is greater than the final value of the lamb.

Milk from a cow that has recently freshened is more desirable for a lamb being reared by hand than milk from a cow that has been milked for some time. This milk should be high in fat, since ewe's milk is richer in butterfat than the average cow's milk. Only the milk from a single cow should be used during the first few weeks. The milk should be fed before it has lost its animal heat; but if warming is necessary, it should never be boiled, but only brought to a temperature of ninety-two degrees Fahrenheit. Only small amounts of milk should be fed at one time, but the times of feeding should be every two or three hours.

County News and Comment

Allegheny County, Pa.—Hot and dry weather has given way to a cool and moderate fall of rain, which is a much needed blessing in this section. Have been experiencing summer heat, and growth is retarded on account of drought. Spring work well advanced. Fruit farmers have an unusual amount of planting done for May first. Wheat, meadows and pastures are in poor condition. This rain will, no doubt benefit them. Much interest being taken in poultry. Many farmers having cattle tested for T. B.—C. K., April 28.

Blair County, Pa.—Farm work progressing rapidly this spring as the weather in general has been very favorable. Wheat and oats looking fine and the prospects are good for the hay crop. Many farmers are ready to plant corn now and some potatoes are planted. Blair County was in the path of the severe wind storm of April [illegible] and several hundred thousand [illegible] of damage was done. [illegible] and sheds were destroyed as well as other buildings; trees were uprooted and broken down. In some sections the wind and rain were accompanied by hail and lightning. We have experienced the hottest weather for the season that we have had for many years when the mercury reached [illegible] degrees last Friday. Forest fires made their appearance in several places this week but the rain on Tuesday greatly checked them. The orchards and mountain sides are indeed beautiful at this time, although many cherry and plum trees have lost their blossoms. Apple trees are masses of flowers and the June berry, red bud and dogwood decorate the woodland. Public works are rather dull at present and prices of produce are unsettled but slightly lower in general.—H. E. H. April 29.

Bradford County, Pa.—Spring farming is opening; considerable plowing being done, a small percentage of the oat crop is sown and early potatoes are being planted. Most of the wheat is looking fair; rye withstood the winter better than the wheat. Bees wintered fairly well. Many raisers have been feeding for a month. Several new incubators have been installed this season. Chicks in general are hatching very well. Will probably be about the same number raised this year as last. Some roup reported in old flocks. Farmers tending toward purebred cattle or none at all. Some hay still being held. Dirt roads as a rule are good. Eastern Bradford is looking forward to more improved roads during the coming summer.—G. E. E., April 27.

Cambria County, Pa.—More plowing done this spring than at any time since the war. This county is located in the heart of the [illegible] coal area and the ups and downs of the coal business are at once reflected in agricultural conditions. When the mines closed down on April 1, the miners began making gardens. Those who do not have garden room go out in the country and rent garden patches often of several acres. Many farmers have been, of recent years, mining or working in the mills while continuing to live on the farm. They are all back now busy plowing. As one of this class remarked "While there is nothing in farming under present conditions, yet a farmer always has enough to eat and a good place to sleep." What crops to plant for local markets this season is a puzzler. Considerable tuberculin testing being done thruout the county. Interest in high-grade livestock has been greatly stimulated by

De Laval Milker Outfits Now Sold for

$175.00 and up - depending on the number of cows to be milked

The Most Economical As Well As the Best of All Milkers

After nine years, and with more than 25,000 in use, it is an established fact that the De Laval Milker is not only the best but also the most economical of all milkers. This is especially true in view of the recent price reduction and the addition of the De Laval Junior Milker Outfit, for milking small herds, to the line of De Laval Milkers.

Whether you have 5 or 500 cows there is a De Laval Milker Outfit exactly suited for your needs, which will pay for itself in saving time and labor and increasing the quantity and quality of milk, and by making dairying more pleasant and profitable.

It is possible to get mechanical milkers for less than the first cost of a De Laval—but you can't possibly get the same results. During the time that De Laval Milkers have been on the market and with the large number in use, the following facts have been established:

—we have never known of one to injure a cow;
—the action of the De Laval is so pleasing and stimulating that cows almost invariably produce more milk;
—the De Laval is practically fool-proof and does not require a skilled operator;
—it not only milks better but faster, thus saving more time;
—it is easy to wash and keep in a sanitary condition.

Therefore, the De Laval is by far the cheapest in the end. In addition, it is sold on such easy terms that you can have the use of it while it pays for itself.

The De Laval Separator Company

Are You Getting Clean Milk?

If you are straining milk through cloths or fine mesh screen strainers, you are not removing all the dirt and sediment from the milk.

Thousands of milk producers have found by actual test that the

Dr. Clark Purity Milk Strainer

is the only strainer made that can possibly remove ALL the fine dirt, muck and other sediment from milk. These results guaranteed or your money refunded.

Purity Milk Strainers are used by the largest milk producers in the United States, including Borden, Van Camp, Carnation, Mohawk, and Sheffield Farms Dairies, and thousands of individual producers.

Made in two sizes—10 quart and 18 quart. Ask your Dealer, or write us for description and prices.

Purity Stamping Company
Dept. B Battle Creek, Mich.
World's Largest Manufacturers of Cotton Discs for strainers and filters.

PURITY Cotton Discs are made in any size from 5 1-2 in. to 7 in. diam., for all makes of strainers or filters. Send for a trial order

SILOS Best for 23 Years—Best Now. Highest Grade of Material and Workmanship. Made from the Centuries old Genuine Yellow Douglas Fir. The only silo on which you can get those famous INTERNATIONAL AUTOMATIC-TAKE-UP-HOOPS. Write now for Special Winter Discounts.
International Silo Co., Dept. 14. Meadville, Pa.

Chicks get 6 solid weeks of sunshine

fed on Ful-O-Pep, the Chick Starter made of nutritious oatmeal with cod liver oil compounded right into it

What is the miraculous quality in Ful-O-Pep Chick Starter that practically wipes out the huge mortality of young chicks and promotes such amazing growth, wherever this remarkable chick ration is fed?

Vitamins! What *are* Vitamins? No one knows what they *are*—just as no one knows what electricity *is*, or what Radio *is*. But we know what they *do*.

Ful-O-Pep Chick Starter with its cod liver oil contains two properties that we call Vitamins—Vitamin A and Vitamin D—which *build strong bones* and promote *swift growth.*

These Vitamins in Ful-O-Pep Chick Starter do what sunshine does in reducing chick losses to a minimum, and raising husky, strong-boned, fast-growing chicks. They do it indoors, or in the dark, regardless of season, climate or weather.

Make this test for your own satisfaction

Divide a hatch of young chicks equally, feeding half on Ful-O-Pep Chick Starter, the other half on your usual chick ration. Watch for leg weakness. It will not develop in the Ful-O-Pep fed chicks. After six weeks compare the average weight of the two pens. The result will prove to you conclusively that Ful-O-Pep Chick Starter is the most important scientific feed discovery that has ever come into the poultry-raising industry.

Read what this user says

June 16, 1924

Gentlemen:

I believe that Ful-O-Pep Chick Starter with Cod Liver Oil is one of the greatest developments in chick feeding in a good many years. Our spring was cold and rainy and chicks were confined to their houses week after week without any chance of getting out on the ground; their development on Ful-O-Pep Chick Starter under these adverse weather conditions was remarkably uniform and the broods were entirely free from leg weakness, not one case in 2000 chicks. L. Harris Hiscock, Skaneateles, N. Y.

In most localities throughout the country, the best dealer carries the Ful-O-Pep line of poultry feeds, and can provide Ful-O-Pep Chick Starter. If your dealer does not sell it, add his name when you mail the coupon.

The Quaker Oats Company
Chicago, Ill.

FREE—Ful-O-Pep Poultry and Record Book

Containing 52 pages of authoritative instructions on poultry raising and all the essential points contained in our famous correspondence course. Send the coupon.

FUL-O-PEP CHICK STARTER

Feed Ful-O-Pep Chick Starter first six weeks, for strong bones and swift growth

Feed Ful-O-Pep Fine Chick Feed from second to sixth week

Feed Ful-O-Pep Growing Mash from sixth week through five months

Feed Ful-O-Pep Coarse Chick Feed from the sixth week to the fifth month

Begin feeding Ful-O-Pep Egg Mash at fifth month and feed all year round

Feed Ful-O-Pep Scratch Grains from sixth month on—one quart per day to each twelve birds

Oats and Poor Hatches

I have had very poor hatches and was told not to feed oats during the hatching season as this was the cause of my poor hatches. What do you think?—G. F. H., Berks County, Pa.

I have never heard of oats injuring breeding stock if fed in moderation. We used ground oats as twenty per cent of the laying mash. Whole oats are often used as a third of the scratch grain ration altho the hens like corn and wheat better. After threshing time I often soak the oats over night and place pails full on the range. At the same time the hens receive their regular ration. The oats are just a supplement which they can eat if they wish. The pails are usually nearly empty at night.

I think a ration of oats exclusively might reduce the vigor of the hens and in that way lower the hatchability of the eggs. Whole oats with their dry papery hulls are hard to digest until softened by soaking. But a small amount of oats in the ration is good for egg making and I have never found it to do any harm.—R. G. K.

Starting with Geese

I shall be interested in any information you may be able to publish about Toulouse geese. I am buying a pair and have no knowledge of caring for them. Mrs. O. D. B. C., Bradford County, Pa.

A pair of Toulouse geese need little care during the spring and summer. Provide a good grass pasture and plenty of drinking water and they will thrive. Do not feed too much corn to breeding geese. Oats are a better grain feed as they are not so fattening.

A good ration to stimulate egg production consists of three par bran, one part corn meal and on fourth part meat scrap. It usuall pays to save the first eggs and pla them under hens allowing four goo eggs to a hen of the America breeds. The last of the eggs la can be incubated under the mothe goose.

Goslings need a good grass ran and some shade for protection fro the hot summer sun. Stale brea soaked in milk and squeezed nearl dry is a good first feed for goslin Some breeders add a little hard bo ed egg to the ration. A mash co sisting of one-third corn meal an two-thirds middlings is also good f starting goslings.—R. G. K.

Perform Postmortem

Will you please advise me what I can do for my hens and ducks? They seem all right in the morning and by eve are dead. Their combs are a blue black. They eat corn, wheat, and a dry mash, have a fairly good stable, clean water, and a good big pen. What can I use for a remedy for this disease as I believe it spreads? The other day my biggest male died. They don't seem to loose any flesh.—Mrs. E. L., Lehigh County, Pa.

When chickens die suddenly wit out apparent cause it is frequent due to an internal rupture. Wi hens it may be due to the strain laying. Male birds become too fat die from over exertion in fighti Some poisonous substance on t range might cause the losses. H that die from liver trouble due heavy feeding and lack of exerc often have dark heads. Such l are easiest to explain after a p mortem examination. A study of t internal organs often gives clews to the cause of the losses.—R. G.

Wise Care of Baby Chicks

CARING for baby chicks is one of the most fascinating of occupations. It is one in which it is easy for the beginner to go wrong—as far as the welfare of the chicks is concerned—because quite often he lets his sympathy for the youngsters get the better of him and feeds them when he shouldn't.

Chicks should not be fed at all for the first forty-eight hours after they are taken out of the incubator. The reason for this is that shortly before the little fellow hops out of the shell the egg yolk is drawn into his body, thereby supplying him with all the nourishment he needs for nearly a week after he is hatched. Any other feed during the first two days is really harmful as it makes the very small digestive system work hours overtime. Diarrhea and probably death are the results. The following feeding schedule has given good results in feeding chicks and is recommended:

Menu for First Few Weeks

1. A scratch feed composed of equal parts of fine cracked corn, cracked wheat, and steel cut oats fed in the litter five times a day for the first two weeks, just what they will clean up in fifteen minutes. During the first day of feeding this, a few rolled oats may be added to attract the attention of the chicks, as they are bright and easily seen. Water or sour milk or butterm should be kept before the babies the time.

2. At the beginning of the seco week, keep bran in front of th chicks in addition to giving the ha grain scratch mixture.

3. At the beginning of the thi week, substitute the following mash for the bran: three parts br one part each of middlings, grou oats, corn meal, bone meal, one-ha part meat scrap. Meat scrap shou be increased to one full part af the sixth week.

Green Food, Too

4. Handful of green food (spro ed oats, for example) at third w

5. Cut down scratch feedings four daily, at beginning of four week.

6. Cut down scratch feedings three daily, at beginning of fif week.

Follow this schedule until chick are twelve or thirteen weeks ol then cut down feedings to twic daily of cracked corn and who wheat, equal parts, and keep sa mash before them. This can maintained until birds are near mature.

Plenty of green food, milk, a exercise mixed in with shade and big run will produce good heal young stock. Try it.—Ralston Hannas.

Our Young People's Forum

From Forum Friends

Dear Cousin Ruth:—I heard you were sick. I am very sorry for I don't like any one to get sick. My father is sick, too, and my mother and sister and I have to do all the work.

The horse I said I would tell you about later did not do very well so we took him back. Then we had another one, she was black with white around her eyes and nose but she was very lame so we didn't want her. But now we have a roan. She is very nice and likes her feed very much. She paws if we don't feed her first. I also have another pet, it is a dog. His name is Spider and he is brown and white.—Evelyn Holcombe, Hunterdon County, N. J.

Dear Cousin Ruth:—Here are some riddles for the Forum page.

1. When a boy falls what does he fall against?
2. When are cows cruel?
3. If the rain falls does it ever get up again?
4. How do you catch a squirrel?—Andrew W. Doherty, Wayne County, Pa.

Dear Cousin Ruth and Forum Friends:—Our school was out today, April 21, and I was very glad. There were three girls who did not miss any days of school. I was one. I got a box of handkerchiefs and they were very pretty.

We live on a farm of about seventy-five acres. We have two dogs and a good many cats. My favorite is Mollie. She is my pet and I teach her very many tricks.—Jessie E. Torbet, York County, Pa.

Congratulations for not missing a day of school. I made a record like that in my schooldays and the teacher gave me a thimble.

COUSIN RUTH.

Dear Cousin Ruth and Forum Friends:—I am fifteen years old and passed the eighth grade examination for high school. I am taking music lessons and like it because I am fond of music. Are you, Cousin Ruth?

Are you glad that summer is here? I am, and wish that summer would never leave.

We have several pets such as cats, a dog, and chickens. I have a pet chicken that comes to the door every day for her meals. She seems to know mealtime like clockwork. When it is dinner she comes to the door and acts as tho she is scolding me. She would come in the house if I would let her but I will not.—Edna Steidler, York County, Pa.

I am very fond of music. What instrument do you enjoy most?

COUSIN RUTH.

NATE AND TIPPIE
Ethel Heil, Wayne County, Pa.

Dear Cousin Ruth and Forum Friends:—I am a girl eleven years old and am in the fifth grade at the Union Independent School. I think there are some very interesting letters on the Forum page. I have a dog named Barney Google and two kittens.—Ella Morton, Washington County, Pa.

Dear Cousin Ruth and Forum Friends:—Our school stops May first. We are going to have a picnic on the last day. We live on a farm. I am very glad spring is here for I love to hear the birds singing and watch them building their nests. I love to go to the woods and pick wild flowers, too.

Do you not like to see the fruit trees in blossom? We have a large fruit orchard.—Erva Hartge, Westmoreland County, Pa.

Hello, everybody! I have been trying to think up some good things to tell the Forum readers about my life in a lighthouse.

During the Easter vacation I had a friend come to visit me for a week. We had a lot of fun on the beach which is very rocky, but is nice in the summer because we don't have to have any spring-boards as Nature provides us with that.

We found many paths and trails running up and down the banks of the cliff. We followed these paths and had lots of fun. But, alas, our poor stockings were torn to pieces by the thorns.—Leta Ehrhardt, Suffolk County, N. Y.

MY HOME: HORTON'S POINT LIGHTHOUSE
Leta Ehrhardt, Suffolk County, N. Y.

I was very glad to receive another letter from you, Leta, also the picture of your home. I shall not soon forget my first glimpse of the Portland headlight last summer.

COUSIN RUTH.

Dear Cousin Ruth and Y. P. F.:—I am ten years old and in the fourth grade. My brother will be nine in May. I never started to school till I was seven years old and my brother was six. Our school is out the fourth of May. We have recitations the last day and the teacher is going to have a big dinner. My sister found a four-leaf clover.—Ida Nipps, Washington County, Pa.

Dear Cousin Ruth and Forum Friends:—I am a crippled boy of fifteen years and am a sophomore in the Slatington high school. I go to school by train. My average for this year was not lower than 92.60.

I live on a farm at Wanamakers, which is a very delightful village. It is encircled by a part of the Appalachian Mountains. We have fresh, cool breezes in summertime when the temperature is far above normal. The chief product that is raised in this section is potatoes.

I have seven sisters and two brothers. Both of my brothers are farmers.

My pets are two dogs, one is a Shepherd and the other is a Collie; they are both very intelligent.

In summer time I usually work at my sister's place at the hotel. I also pull weeds out of the potatoes, and help on the farm at harvest time.—Ralph F. Kistler, Lehigh County, Pa.

Dear Cousin Ruth and Forum Friends:—I am eleven years old. We live in town. For pets I have a dog and two ducks. I had a kitty but it died. I was sick in bed with the measles. I had not missed a day at school and then I had to miss.

I have a little baby brother. He is four weeks old. How many birds did you see? I saw ten robins, six bluebirds and eight woodpeckers. There is a robin's nest right in back of our house and every day I see him carry food to his nest.

When we get Pennsylvania Farmer I read every letter that is in it. I have nearly two miles to go to school. The Sunday school that I go to is right across the street from the schoolhouse. I am in 4-B in school. Here are some riddles:

1. What is that which is often brought to the table, cut, but never eaten?
2. What is that word of five letters, which, when you take away two only one remains?
3. When the clock strikes thirteen what time is it?
4. What is smaller than an ant's mouth?
5. Why does a chicken cross over the street in the mud?—Helen Bashore, Dauphin County, Pa.

Dear Cousin Ruth:—I am eleven years old and in the sixth grade. I have two sisters, one older and one younger. We go to Newton high school. We walk about one mile each day.

There are about ninety acres in our farm. I like to work on the farm and do such things as harrowing. We have two horses.

In the summer my father goes to Scranton about every other day with sweet corn, tomatoes and apples. I like to go with him.

I have a patch of blackberries which will bear this year. We have a radio. It is a five-tube set. We like it very much and get many interesting things on it.

I like to read Pennsylvania Farmer. With much joy to the Y. P. F.—Leon G. Kircher, Lackawanna County, Pa.

Dear Cousin Ruth and Forum Friends:—I am a boy of thirteen and am in the seventh grade. There are only ten in our school. We are going to have a play at our school. I am to be a crow. I have four brothers and two sisters. My oldest brother is in the Merion band and my other brother plows up the farm and so I have to do all the work around the barn.

For pets I have three dogs, two of them are Collies and one is a small one. She can stand on her hind legs. I have three geese of my own.—Alex Kapuscinski, Luzerne County, Pa.

Dear Cousin Ruth and Members of the Y. P. F.:—This is my first letter to the Forum page. My school closed April 10 and now I help to dig the garden and have a good time.

I am glad spring is here. There is a robin building a nest in a maple tree beside the house. Last year a wren built in the top of a porch post. We have a dog named Nell and some chickens and about twenty-six peepies.—Edward D. Keefauver, Cumberland County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

Dear Little Folks.—The figures in the following story correspond to the words you will fill in in the accompanying cross-word puzzle. It will not be difficult to guess what the words are which should go in where the numbers are.

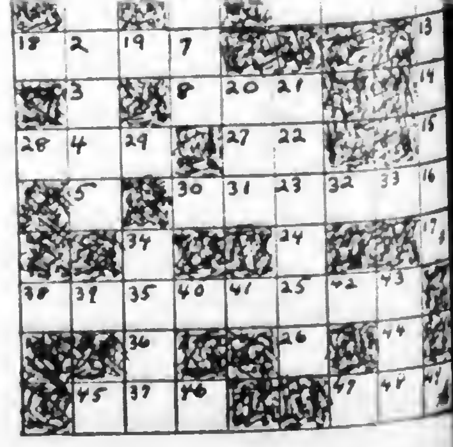
Two of our Little Folks, Tom and Alice, 18, 2, 19, 7 on a farm. They have lots of fun helping with the chores. When 8, 20, 21 comes in from plowing in the 1, 2, 3, 4, 5 he is just ravenously 12, 13, 14, 15, 16, 17 for the good cakes and 34, 35, 36, 37 Alice and 21, 22, 23, 24, 25, 26 have been baking. Alice has a little flock of 38, 39, 35, 40, 41, 25, 42, 43 and she is going to save 28, 4, 29 the money 13, 11, [illegible] the hens are 6, 7, 8. She wants to buy [illegible]. Tom is going to 45, 27, 16 his Dad how 9, 10, 11, 12 longer it will be before he can join a calf club. 20, 27, 31 of these fine days, when there is 27, 22 school, Tom is planning to write a 30, 31, [illegible], 32, 33, 16 to his uncle in the city telling him about their doings. There—don't you hear mother calling that it is time for 47, 48, 49?

When you have found the words send them to me on a POSTAL CARD so that they will reach me by May 16. BE SURE TO SAY HOW OLD YOU ARE. The ten children sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance, will each be awarded a package of postcards. Address all replies to the PUZZLE EDITOR, PENNSYLVANIA FARMER, 261 SOUTH THIRD STREET, PHILADELPHIA.

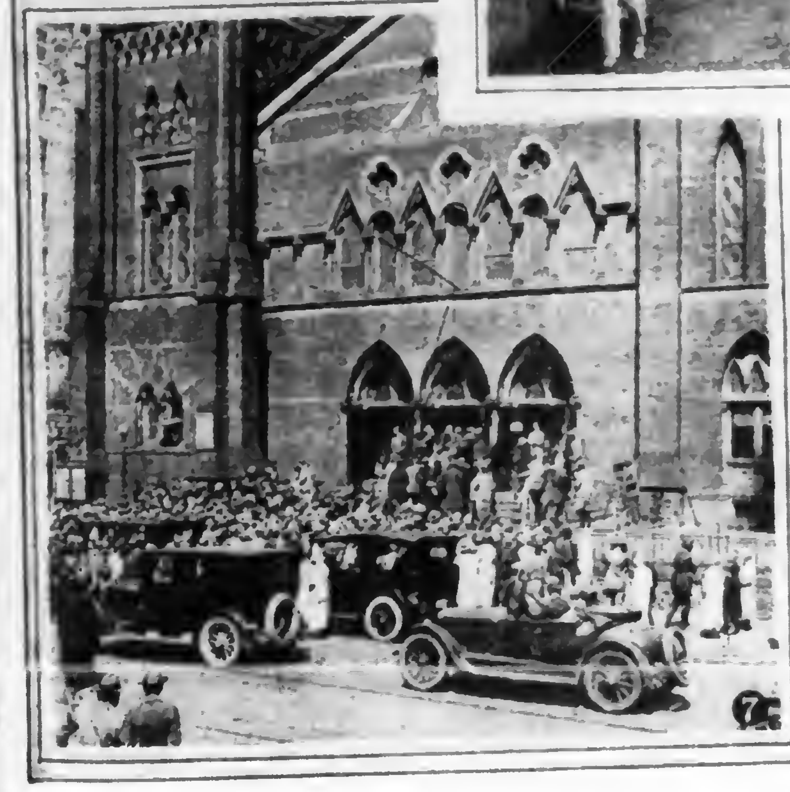
Puzzle Prize Winners

The answer to the puzzle published in the April 18 issue of Pennsylvania Farmer is: VIOLET; TULIP; ARBUTUS; PANSY; CROCUS; DAFFODIL.

The prize winners are: Boyce Carter, age 7, Meshoppen, Pa.; Florence Crawford, age 10, Montgomery, Pa.; Mildred Deardorff, age 10, Cly, Pa.; Mary Good, age 7, Peach Bottom, Pa.; Martha Haines, age 10, Elizabethtown, Pa.; Helen Hale, age 10, Towson, Md.; John A. Oliver, age 12, Scotland, Pa.; Lloyd Rutt, age 11, East Earl, Pa.; Charles Stauff, age 10, Moscow, Pa.; Harry K. Witmer, age 9, Bird-in-Hand, P



PASSING EVENTS IN PICTURES



(Copyright by Underwood & Underwood)

1.—Lieutenants Holcombe, Byrd and Council, of the U. S. Navy, who have volunteered to accompany the MacMillan Arctic expedition in two seaplanes.

2.—Peruvian cadets in training at Chorrilas, the West Point of Peru.

3.—Planes like these which are circling around the new plane-carrier Saratoga, the longest naval vessel in the world, passed over the offices of Pennsylvania Farmer on the day of the launching of the mother-ship.

4.—Mrs. William H. King, wife of the Senator from Utah.

5.—Peace reigns thruout this quaint tropical resort. Picturesque carriages are used instead of "buzz-wagons" in old Nassau.

6.—The new thirty-ton steel door of the vault of the National Bank of the Republic in Chicago. The least noise inside the vault will set off the new "phonet alarm."

7.—This crowd outside the Congregational Church in Washington, D. C., greeted the President and Mrs. Coolidge and Secretary and Mrs. Wilbur.

8.—A notable group of white beauties at one of New York's dog shows.

OUR HOME PAGE

Conducted by

Mrs. IDA S. HARRINGTON

Just an Average Day's Work

Not All of Us Can Be Super-Efficient Homemakers

SYSTEM is a fine thing, but not all of us can do, or dare attempt, as much work as the author of the excellent schedule recently published. There are so many days when I am obliged to cut my work to a minimum that I hardly know I have a system, tho theoretically, my days are as carefully planned as I know how to plan them.

Unfortunately, I believe there are more women like myself than like the sturdy super-efficient homemaker who always does everything perfectly and has worlds of leisure. Hence I shall be serving the majority if I sketch a few of my own methods.

Avoiding the "Hot Box" Stage

Perhaps one can accomplish more by working steadily from 5.15 to 1.30 than by interspersing the heavy work with sewing or other sedentary tasks, but if I could work rapidly enough for that length of time to crowd in all the work described by the writer in question, I should be ill for a week and perhaps for a month. My chief problem is to place first things first.

At this time of year I begin about six o'clock, and after breakfast (at about seven) my first work is to tidy up my living room and dining room and make my beds, because my house is so arranged that all these rooms are open to chance callers.

Then I do my dishes, which have been stacked in the pan, closely covered to prevent drying. That done, I usually bake or iron or clean house till I have to get dinner, unless I find myself getting dangerously tired. In that case I sew or mend or pare apples or potatoes for a while, and finish the other work after dinner.

Recharging the Batteries

Any woman who can take a nap after dinner and be refreshed thereby is richly blessed. I sometimes lie down for ten minutes, but if I ever go to sleep, my afternoon is spoiled and I feel far worse than before. I can manage my work much better if I can sleep till seven o'clock in the morning, because by that time I am rested and can do a fair day's work. If I rise earlier, I am tired all day. When we have been so situated that I had to begin my day at five o'clock, I simply dragged around and it took me all day to get the meals and do the dishes.

This may be unusual, but it is no more so than the ability to care for five bedrooms and several other rooms, cook for six or eight persons, wash, iron, clean, make garden, tend poultry, and be ready for a bath and a clean dress by one-thirty every afternoon.

We have a little woman here who goes over every room in her house every day, but she has a family of only three, and even so her neighbors say she is wearing herself to the bone for nothing. The vast majority of us must content ourselves with less immaculate houses, lest we fill premature graves.—Mrs. E. M. Anderson.

Editor's note.—An up-to-date laundry finds that it pays to enforce a five-minute rest period once an hour during the working day. More work is done and fewer mishaps occur. The same rule applies in the home.

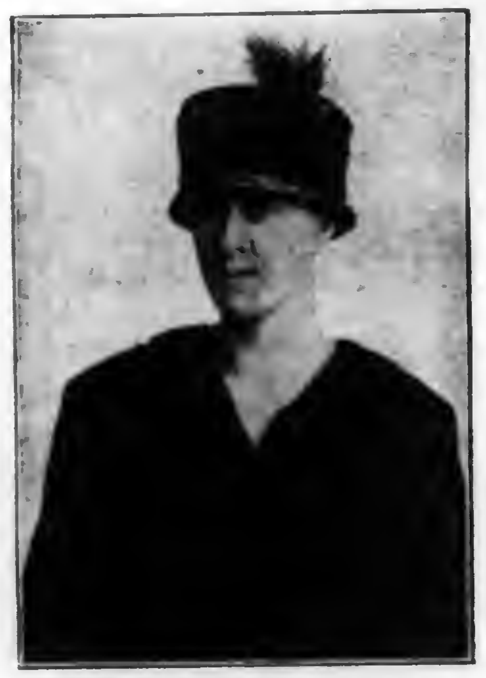
It is poor business to spend beyond one's income,—whether that income be money or strength.

Mothers Day

The men of earth build houses
With pillars, walls and domes
But the women of the earth,—
God knows;
The women build the homes.

The Right Hat

MANY a woman sees an attractive hat in the shop, buys it, and then wonders why she does not look attractive in it. She has not realized just what the principles are that govern the becomingness of hats. All women want their hats to be distinctive, out of the ordinary, becoming in an unusual way or to an unusual degree, but how many women know that this effect is secured by trying to bring the appearance of the face and head as near the average as possible?



How the slender woman shouldn't dress to look her best.

This vital question, upon which hinges many an avoidable tragedy, is being asked Kansas women by L. Maude Finley, millinery specialist at the State Agricultural College. Here are some of Miss Finley's theories which she convincingly proves with pictures.

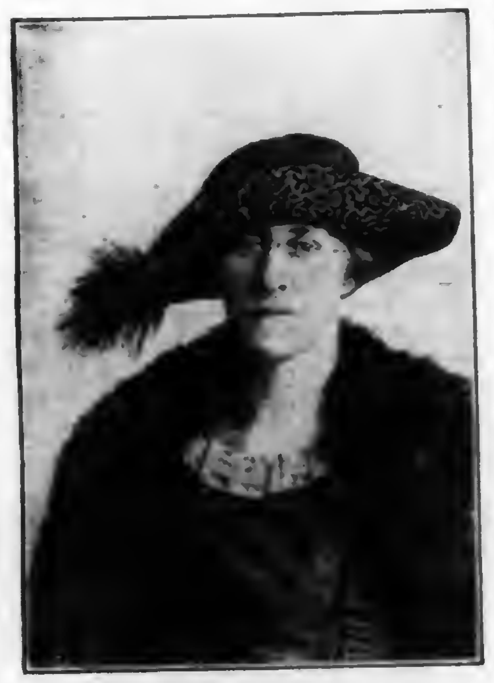
If Not the Average

The average woman may wear any kind of a neckline and may dress her hair in any style and feel confident of her good appearance. But suppose the woman is taller and thinner than the average and has a long, thin face. Often her neck is more than one unit in length. Her problem is to make her face seem broader and her neck shorter. If there are sharp lines in the face, she must try to make them appear round and soft.

The hat selected for the tall, thin type should be broader than it is high, but it should never extend beyond the shoulders. An extremely broad hat makes the wearer look top heavy. A brim which rolls slightly has a tendency to broaden the face. The trimmings should lead the eye across the hat, rather than up and down. All small hats with high trimmings make this individual appear taller and thinner.

Dress the Hair Becomingly

Her hair should be dressed low on the forehead to shorten the face, and wide at the sides to broaden it, and at least the tops of the ears should be covered. If the lines of the face are sharp, the lines of the hair should be gently curving. If the hair is parted, it should be at the side, as a part in the middle exposes the face the entire length to the hair line and makes the face appear longer. The hair should be coiled low to shorten the length of the neck. At the neck the sides seem shorter when the hair is brought down over the tops of the ears.



The same woman becomingly dressed. Note the changes.

The neckline should never be a deep-pointed V, or square. It should be a wide, shallow curve, broad at the shoulders but not low in front. The eye should be led across from side to side instead of downward.—S. P.

Out of the Attic

IN MANY a farmhouse attic is an accumulation of old furniture that must be moved about at each housecleaning, is never put to any use, and yet seems too good to be thrown away. Some of this furniture can be put to surprisingly useful purposes if we study a bit over its possibilities.

Is there an old walnut whatnot? Remove its upper half and to this smaller portion attach screw eyes or stout picture cords so that it may be hung upon the wall. This makes an almost exact duplicate of the hanging book shelves now found in the shops which cost from twelve to twenty-five dollars. The remaining lower portion of the whatnot makes a useful magazine stand for the living room.

Another tenant of the attic is the old-fashioned towel rack that used to grace every self-respecting guest room. Attractive little tables can be made from these racks by sawing off the upper portion and attaching a table top made from new material or from portions of other discarded furniture. Mother will appreciate such a small table beside her sewing chair or it will find a dozen other uses about the house.

Coming into Its Own

The old drop-leaf table after many years of seclusion is again coming into its own. Rejuvenated with new stain or paint, it suggests a dozen uses, from breakfast table in a cosy corner of the kitchen to a place of honor in the living room.

A little more skill is required to turn an old spinet or melodion into a charming modern spinet desk. The inside workings of the musical instrument must be removed, leaving nothing but the case which is apt to be of beautiful wood aged to a wonderful finish. A row of pigeonholes must then be fitted in beneath the folding cover and a writing surface placed where the keyboard once held sway.

Study the possibilities of the attic furniture. It is often surprising what can be done with articles that at present are a nuisance and an encumberance.—Alice Margaret Ashton.

Slips and Stains

WHAT have you done with your old petticoats, the kind that tied about the waist? Make slips out of them by cutting off the tops at a point where the petticoat will be wide enough to fit the bust. Add enough pillow tubing of the proper width and length to the top, a pair of straps, and you will have a satisfactory every-day slip.

• • •

Try to wash clothes this way: Put a tub of cold water on the stove, add a cake of shaved soap, and a little ammonia and borax powder. Put in the clothes, not too many, and let the water heat, but not boil. A small brush for the spots that usually retain soil, as cuffs, collars, etc., will finish what you have started. Putting clothes into very hot water will set certain stains, such as egg and coffee. Rinsing in lukewarm, rather than cold water, will keep the clothes soft.—K. W. H.

Harry Knew the Trick

I HAD had a terrible time with my wringer. For a year I had been about worn out every time I used it. I couldn't think of it as anything but a woman killer. One day I grew desperate and said, "If anyone would offer me a dollar for the thing, I'd sell it!"

The wife of one of our tenants happened to be in on an errand. She said, "I'll take you up. I never owned a wringer, but I guarantee I can haul that one around." Well, I was as good as my word and I sold it to her, on time.

The End of the Story

I, of course, bought another wringer and was taught how to take care of it. It's a dandy. But this tale is not ended.

One day I said to the tenant woman, "How is your wringer working?" "Just fine," she laughed. And then she laughed some more. "What is the matter?" I asked. She replied, "Oh, nothing, only all that wringer needed was a little oil. Harry loosened it and gave it a good oiling and it runs slick!"—M.S.G.S.

Building Problems

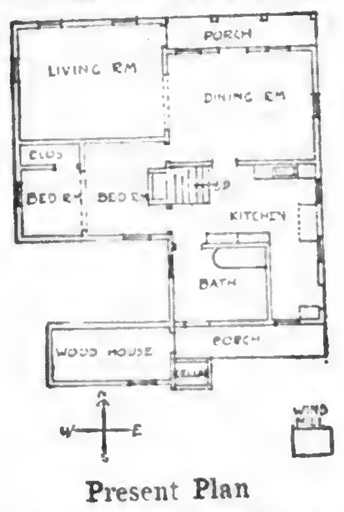
AR Pennsylvania Farmer:— ould you help me arrange our so as to get more sunlight in rooms? Also, what style would you put on the east We should like the rooms to face south, as there is derful view of the Mohawk

house is about eighteen inches than the public road and the side of the house is two feet from the ground than the side, which is fifteen inches. would rather have the stairs down in the hall, as I don't the men going thru the living also we won't be able to put room upstairs for some time will have to come downstairs

The ceilings downstairs are nine feet, and the upstairs eight feet. A hot air furnace heats the first floor. I use an oil stove for cooking.

We would appreciate any suggestions which you might be able to offer.—Mrs. D. G., Jr., Montgomery County, N. Y.

If we throw the kitchen and bath together, we will get a splendid big living room. Of course, we must put in a triple window at the south end, to take advantage of that wonderful view you speak of. Then we will use the old living room as a kitchen; it is the right size, and well placed.



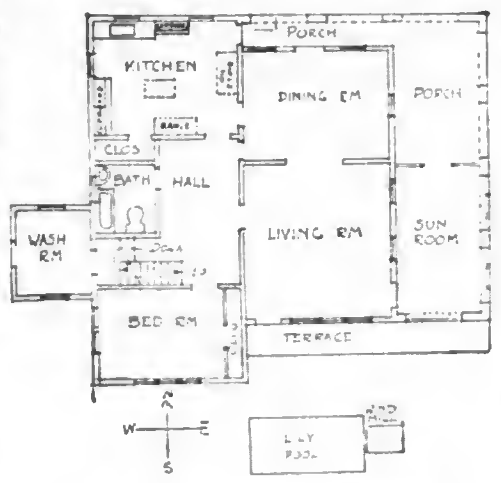
Present Plan

The small bedroom will be amply large for a bath; the large bedroom will make a good hall. We will keep the present dining room; but will put French doors between it and the living room. This will give the view of the Mohawk Valley,—right thru the living room.

Next, we will build on a stairway; and a bedroom to the south. In my own home, I have carefully planned the bedrooms to get good views for I love to look out at a beautiful landscape, while dressing. Somehow it seems to start the day right!

The wash room is built down on the ground at the level of the lower landing on the stairway. The men can come in here, wash up, and then go directly to any part of the house, without passing thru any other room.

We will build a new porch to the east; part of this will be glass-enclosed, forming a sun room. This new porch, also the old north porch, will have heavy Spanish arches, stuccoed or shingled. W. D. B.



After suggested remodeling.

MUSHROOM CATSUP

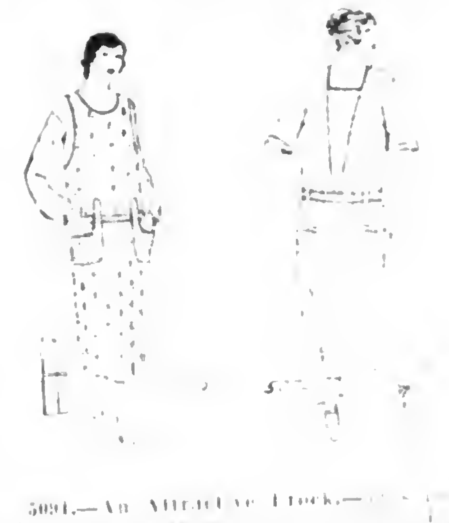
Pick over, wash and drain one peck of mushrooms. Slice, put in saucepan with small amount of water, cover and let cook, stirring frequently until soft. Press thru a fine sieve and to the pulp add one pint vinegar, two teaspoonfuls salt, one-half teaspoonful cayenne pepper, two tablespoonfuls mustard seed, one tablespoonful cinnamon, one-half teaspoonful each of ground mace and cloves. Cook until thick, bottle and seal. If the catsup is to be used only with meats, add one teaspoonful grated horseradish with other seasonings.—L. M. T.

Indoors, Outdoors, Anywhere

Directions for Ordering.—Give figures and letters of each pattern exactly as printed at beginning of each description. Give bust measures when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5079.—A Good Apron Style.—Figured percale, with rick-rack braid for trimming, is here portrayed. This is a good model for unbleached muslin or gingham. Four sizes, small [illegible], medium [illegible], large [illegible], extra large 46-48 inches bust measure. A medium size requires [illegible] yards of [illegible] material. Pattern 10 cents.

5072.—Morning Frock for Mature Figures.—Striped or figured percale, gingham or linen could be used for this design. The vestee helps to give an effect of slenderness to the [illegible]. Eight sizes 42, 44, 46, 48, 50, 52, 54 and 56 inches bust measure. A 44-inch size requires four yards of [illegible]-inch material. The width of the [illegible] lower edge [illegible].

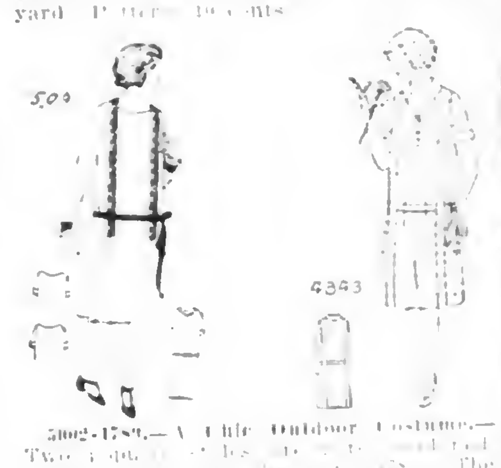


5091.—An Attractive Frock.—[illegible] will require [illegible] yards of [illegible] material with three-eighths yard of contrasting material for cuffs and trimming bands. If made with short sleeves [illegible] yard of plain material is required. Pattern 10 cents.

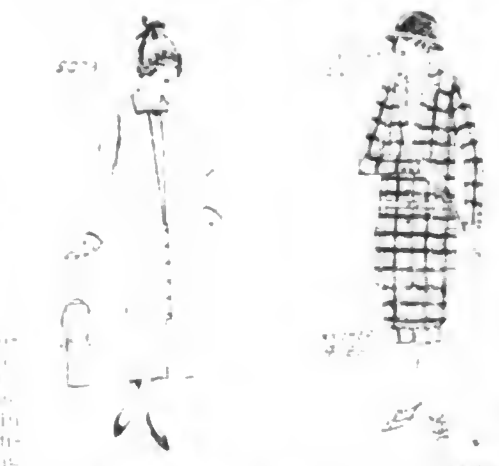
1813.—A Popular Model.—Plaid gingham [illegible] is here [illegible] good [illegible] and linen [illegible] sizes [illegible] A [illegible] size requires [illegible]

trasting material one-half yard is required. Pattern 10 cents.

5078.—A Stylish Frock.—Linen, charmeen, silk, faille or crepe could be used for this style. Three sizes 16, 18 and 20 years. A [illegible] size requires [illegible] of 40-inch material with [illegible] of contrasting material for vest, collar and cuffs. The width [illegible] yard. Pattern 10 cents.



5002-1789.—A Chic Outdoor Costume.—Two [illegible] finished with [illegible] sports [illegible] and [illegible] could be used for [illegible] 42 [illegible]



[illegible] The [illegible] 37 inch [illegible] 17 [illegible]

THE LIGHT IN THE CLEARING

By IRVING BACHELLER

COPYRIGHTED BY THE AUTHOR

Continued

I RODE in silence, thinking of Sally and of those beautiful days now receding into the past and of my aunt and uncle. I had written a letter to them every week and one or the other had answered it. Between the lines I had detected the note of loneliness. They had told me the small news of the countryside. How narrow and monotonous it all seemed to me then! Rodney Barnes had bought a new farm; John Axtell had been hurt in a runaway; my white mare had got a spavin!

"Hello mister!"

I started out of my reverie with a little jump of surprise. A big, rough-dressed, bearded man stood in the middle of the road with a gun on his shoulder.

"Where ye goin'?"

"Up to the Van Heusen place."

"Where do ye hail from?"

"Cobleskill."

"On business for Judge Westbrook?"

"Yes."

"Writs to serve?"

"Yes," I answered with no thought of my imprudence.

"Say, young man, by hokey nettle! I advise you to turn right around and go back."

"Why?"

"'Cause if ye try to serve any writs ye'll git into trouble."

"That's interesting," I answered. "I am not seeking a quarrel, but I do want to see how the people feel about the payment of their rents."

"Say mister, look down into that valley there," the stranger began. "See all them houses — they're the little houses o' the poor. See how smooth the land is? Who built them houses? Who cleaned that land? Was it Mr. Livingston? By hokey nettle! I guess not. The men who live there built the houses an' cleaned the land. We ain't got nothin' else—not a dollar! It's all gone to the landlord. I am for the men who made every rod o' that land an' who own not a single rod of it. Years an' years ago a king gave it to a man who never cut one tree or laid one stone on another. The deeds say that we must pay a rent o' so many bushels o' wheat a year but the land is no good for wheat an' ain't been for a hundred years. Why, ye see, mister, a good many things have happened in three hundred years. The land was willin' to give wheat then an' a good many folks was willin' to be slaves. By hokey nettle! they had got used to it. Kings an' magistrates an' slavery didn't look so bad to 'em as they do now. Our brains have changed—that's what's the matter—same as the soil has changed. We want to be free like other folks in this country. America has growed up around us but here we are livin' back in old Holland three hundred years ago. It don't set good. We see lots o' people that don't have to be slaves. They own their land an' they ain't worked any harder than we have or been any more savin'. That's why I say we can't pay the rents no more an' ye mustn't try to make us. By hokey nettle! You'll have trouble if ye do."

The truth had flashed upon me out of the words of this simple man. Until then I had heard only one side of the case. If I were to be the servant of justice, as Mr. Wright had advised, what was I to do? These tenants had been Grimshawed and were being Grimshawed out of the just fruits of their toil by the feudal chief whose remote ancestor had been a king's favorite. For half a moment I watched the wavering needle of my compass and then:

"If what you say is true I think you are right," I said.

"I don't agree with you," said young Latour. "The patroons have a clear title to this land. If the tenants don't want to pay the rents they ought to get out and make way for others."

"Look here, young man, my name is Josiah Curtis," said the stranger. "I live in the first house on the right-hand side of the road. You may tell the judge that I won't pay rent no more—not as long as I live—and I won't git out, either."

"Mr. Latour, you and Purvis may go on slowly—I'll overtake you soon," I said.

They went on and left me alone with Curtis. He was getting excited and I wished to allay his fears.

"Don't let him try to serve no writs or there'll be hell to pay in this valley," said Curtis.

"In that case I shall not try to serve the writs. I don't wish to stir up the neighborhood, but I want to know the facts. I shall try to see other tenants and report what they say. It may lead to a settlement."

WE WENT on together to the top of the hill near which we had been standing. Far ahead I saw a cloud of dust but no other sign of Latour and Purvis. They must have spurred their horses into a run. The fear came to me that Latour would try to serve the writs in spite of me. They were in his pocket. What a fool I had been not to call for them. My companion saw the look of concern in my face.

"I don't like that young feller," said Curtis. "He's in fer trouble."

He ran toward his house, which was only a few rods beyond us, while I started on in pursuit of the two men at top speed. Before my horse had taken a dozen jumps I heard a horn blowing behind me and its echo in the hills. Within a half a moment a dozen horns were sounding in the valleys around me. What a contrast to the quiet in which we had been riding was this pandemonium which had broken loose in the countryside. A little ahead I could see men running out of the fields. My horse had begun to lather, for the sun was hot. My companions were far ahead. I could see the dust of their heels now. I gave up trying to catch them and checked the speed of my horse and went on at a walk. The horns were still sounding. Some of them seemed to be miles away. About twenty rods ahead I saw three riders in strange costumes come out of a dooryard and take the road at a wild gallop in pursuit of Latour and Purvis. They had not discovered me. I kept as calm as I could in the midst of this excitement. I remember laughing when I thought of the mess in which "Mr. Purvis" would shortly find himself.

I passed the house from which the three riders had just turned into the road. A number of women and an old man and three or four children stood on the porch. They looked at me in silence as I was passing and then began to hiss and jeer. It gave me a feeling I have never known since that day. I jogged along over the brow of a hill when, at a white frame house, I saw the center toward which all the men of the countryside were coming.

Suddenly I heard the hoof-beats of a horse behind me. I stopped, and looking over my shoulder saw a rider approaching in the costume of an Indian chief. A red mask covered his face. A crest of eagle feathers circled the edge of his cap. Without a word he rode at my side. I knew not then that he was the man—Josiah Curtis—nor could I at any time have sworn that it was he.

A CROWD had assembled around the house ahead. I could see a string of horsemen coming toward it from the other side. I wondered what was going to happen to me. What a shouting and jeering in the crowded dooryard! I could see the smoke of a fire. We reached the gate. Men in Indian masks and costumes gathered around us.

"Order! Sh-h-sh," was the loud command of the man beside me in whom I recognized—or thought that I did—the voice of Josiah Curtis. "What has happened?"

"One o' them tried to serve a writ an' we have tarred an' feathered him."

Just then I heard the voice of Purvis shouting back in the crowd this impassioned plea:

"Bart, for God's sake, come here."

I turned to Curtis and said:

"If the gentleman tried to serve the writ he acted without orders and deserves what he has got. The other fellow is simply a hired man who came along to take care of the horses. He couldn't tell the difference between a writ and a hole in the ground."

"Men, you have gone fur enough," said Curtis. "This man is all right. Bring the other men here and put 'em on their horses an' I'll escor out o' the town."

They brought Latour on a amidst roars of laughter. Wh bear-like, poultrified, be-poodled ject he was!—burred and sh in rumpled gray feathers from hair to his heels. The sight smell of him scared the horses, were tufts of feathers over his and on his chin. They had great joy in spoiling that aristoc livery in which he had arrived.

Then came poor Purvis. They begun to apply the tar and fea to him when Curtis had stopped process. He had only a shaking of long feathers around his They lifted the runaways into saddles. Purvis started off at a lop, shouting "Come on, Bart," they stopped him.

"Don't be in a hurry, young ler," said one of the Indians, then there was another roar laughter.

"Go back to yer work now," tis shouted, and turning to me ed: "You ride along with me let our feathered friends follow

SO WE started up the road o way back to Cobleskill. Latour began to complain that was hot and the feathers pri him

"You come alongside me here raise up a little an' I'll pick the side o' yer legs an' pull out yer feathers," said Curtis. "If you 'em stuck into yer skin you'd reg'lar chicken an' no mistake."

I helped in the process and got fingers badly tarred.

"This is a dangerous man to his soul is tarred," said Cu "Keep away from him."

"What a lookin' skunk you he laughed as he went on with picking.

We resumed our journey guide left us at the town line three miles beyond.

"Thank God the danger is o said Purvis. "The tar on my has melted an' run down at' my sticks like the bark on a tree sick o' the smell o' myself. If I find a skunk I'd enjoy holdin' him my lap a while. I'm goin' back St. Lawrence County about straight as I can go. I never did this country anyway."

He had picked the feathers out his neck and Latour was now picking his arms and shoulders. Pr ently he took off his feathered and threw it away, saying:

"They'll have to pay for Every one o' those jackrabbits have to settle with me."

"You brought it on yourself," said "You ran away from me got us all into trouble by being smart. You tried to be a fool succeeded beyond your expectati My testimony wouldn't help any."

"You're always again the ca talist," he answered.

It was dark when I left my panions in Cobleskill. I chang my clothes and had my supper found Judge Westbrook in his h and reported the talk of Curtis a

adventu and my view of the ation back in the hills. I observ- that he gave the latter a cold wel e.

I shall send the sheriff and a e," he said with a troubled look. Pardon me, but I think it will e a bad matter worse," I answer-

We must not forget that the pat as are our clients," he remarked. yielded and went on with my k. In the next week or so I sat ed myself of the rectitude of my lons. Then came the most crit point in my history—a conflict h Thrift and Fear on one side and cience n the other.

The judge raised my salary. I ated the money, but every day I uld have to lend my help, directly indirectly, to the prosecution of ims which I could not believe to just. My heart went out of my rk. I began to fear myself. For ks I had not the courage to take e with the learned judge.

One evening I went to his home de- mined to put an end to my un- ppiness. After a little talk I told frankly that I thought the pat- ns should seek a friendly settle- t with the tenants.

"Why?" he asked.

"Because their position is unjust, -American and untenable," was answer.

He rose and gave me his hand and smile of forbearance in considera- n of my youth, as I took it.

I left much irritated and spent a epless night in the course of which decided to cling to the ideals of vid Hoffman and Silas Wright.

In the morning I resigned my ce and asked to be relieved as soon the convenience of the judge uld allow it. He tried to keep me with gentle persuasion and higher pay, but I was firm. Then a wrote a long letter to my friend the Senator.

Again I had chosen my way and with due regard to the compass.

It was late June before I was able to disengage myself from the work of the judge's office. Meanwhile there had been blood shed back in the hills. One of the sheriff's posse had been severely wounded by a bullet and had failed to serve the writs. The judge had appealed to the governor. People were talking of "the rent war."

Purvis had returned to St. Lawrence County and hired to my uncle for the haying. He had sent me a letter which contained the welcome information that the day he left the stage at Canton, he had seen Miss Dunkelberg on the street.

"She was lookin' top-notch—stop't and spoke to me," he went on. "You cood a nocked me down with a fether I was that scairt. She ast me how you was an' I lookt her plum in the eye an' I says: all grissul from his head to his heels, mam, an' able to lick Lew Latour, which I seen him do in quick time an' tolable severe. He can fight like a bob-tailed cat when he gits a-goin', I says."

What a recommendation to the sweet unsullied spirit of Sally! Without knowledge of my provocation what would she think of me? He had endowed me with all the frightfulness of his own cherished ideal, and what was I to do about it? Well, I was going home and would try to see her.

Buy a full set

A new Champion in every cylinder will mean greater power and speed and better all around performance.

Champion is the better spark plug but even Champions should be changed at least once a year.

A new set will soon pay for themselves in oil and gas saved and give you greater motoring satisfaction.

Champion X for Fords is 60 cents.
Blue Box for all other cars, 75 cents.
You will know the genuine by the double-ribbed sillimanite core.

Champion X is the standard spark plug for Ford Cars and Trucks and Fordson Tractors.

Cholerine Will Save Them!

The lives of baby chicks—so profitable to you—literally hang by a thread the first eight weeks. You can save yours. Give them Cholerine in drinking water and those dread diseases, Roup, Cholera, and White Diarrhea will be wiped out before they start.

Cholerine is an unexcelled year 'round tonic for hens, prevents diseases, cleans out the intestinal tracts and glands, strengthens digestion, increases appetites and peps up egg production.

There's hardly a big poultry feeder or shipper in the country who doesn't use Cholerine 365 days in the year. Cholerine, used according to directions, is absolutely guaranteed to give satisfaction or your money is refunded.

See Your Merchant

for a sample of Cholerine today. If he hasn't Cholerine, send us his name. We'll supply you.

Don't wait until death grips your chicks. Use Cholerine first.

Mills still running light, and transi prompt shipment feeds are in deman a premium over later shipment.

Butter Market Weak

THE general tone of the bu markets early in the week ing May 2 was steady but with very nervous undertone. Appa sentiment was for the most par favor of lower prices but buying the New York and Chicago ma on the part of the long interes the Chicago April options, in a tort to force the shorts to cove the future board, rather than de er actual butter supported the kets sufficiently to prevent any clines.

After the close of the April on Wednesday noon, weakness came very evident at all mar Dealers who had been the past two or three weeks be forcing sales, and at Chicago e cially, liberal concessions were fered, resulting in price decli Sharp declines were registered on Thursday with buyers express very little confidence in the pre situation and operating cautiou buying for immediate needs only. The weakness which developed been more or less apparent in form of sentiment for several w but actual declines had been p poned as mentioned above, u after the close of the April

County News and Comment

(Continued from page 11)

huge livestock exhibit at the Cambria ty Fair last fall. The new premium offers $65,000 in premiums and prizes 1925. Seed potatoes in great demand the total acreage will be large. Good corn very scarce. Corn from seed is shipped in seldom matures here unthe season is unusually favorable. farm products have been slow sale inter altho prices have held up fairly Retail prices at present: Hay, $18; r, 50c; eggs, 30c; beef, by carcass, e; dressed calves, 15@18c; calf hides, each; live chickens, 30c lb. Weather the month has been generally fair dry with hard freezes nearly every t Fruit appears to be all right yet. grain generally thin and spotted. help plentiful, but no money to pay th. Very few farmers hiring.—S., 23.

May County, N. J.—The spring er arrived early this year and farmhave taken advantage of it. Many em have had peas up for some time. have been selling radishes, asparaand rhubarb for over a week. The men are making special efforts to their sprays on promptly as there been an abundance of aphis on the trees, and it is expected that scab be plentiful unless spraying is done e proper time. They have given their s and peaches the second spray and have been sent out from the county 's office for the third sprays. These should go on in the very near e. Peach orchards were considerably by freezing. Poultrymen are coopg in the matter of buying poultry for broilers and in having the y certified by a veterinarian to meet shipping requirements of the Boards griculture of New York and New y. New poultry houses have gone is spring. Seed corn in the county a very poor germination according s made at the Experiment Station. l vegetable and fruit field meetings been held this spring. Some of the men in this county have joined with s in Cumberland County to form a testing association. It is expected the testing will start within a short —S. W. S., April 27.

ton County, Pa.—Cold dry weather g the first three weeks of April has lots of wheat, some fields being t a total loss. Rain and warm er the last few days have started tion with prospects good for a fair crop. Oats all sown, corn planting begin within a week. Potatoes are planted to a greater acreage than year. Spring pigs high in price and scarce. Mountain fires have burned ands of acres of timber. Public in poor condition. Some wheat still rmers' hand. Many farmers buildbrooder houses to raise chicks and labor. Streams low and clear, fewout than usual are caught. Repretives from the State Health Departheld meetings in Potter, Lamar and Townships to interest farmers in eating bovine tuberculosis. — W. C. April 27.

phin County, Pa.—Favorable weathditions have enabled farmers to get of their oats sowed. The corn l is plowed and the acreage will creased. Condition of grass fields is good. Fruit prospects seem good. potatoes have been planted. During t three days the temperature rangom thirty to eighty-five degrees. were thunderstorms with hail. for products: hay, $14; corn, $1.40 oats, 65c, butter, 55c; eggs, 30c.— M., April 25.

ton County, Pa. — Farmers have advantage of the fine weather and work is well advanced. Corn is half planted, with the ground too work in at present. A freeze on 20 destroyed the peach and cherry completely and a very large perge of the apples. The 23rd and 24th the hottest April days on record n the past twenty-five years. Much corn last year was not sufficiently ed for seed, as a result much seed will have to be bought. Pasture and are short owing to the dry weather. of several kinds have shut down number of people are unemployed. to the low price of potatoes the e will be smaller this year; a large age of farmers are using certified Market quotations are: eggs, 25c; , 0c; meat, 22@25c; potatoes, 80c; 18c—T. H. T., April 27.

tgomery County, Pa.—We are havhe weather altho rather cool and king rain would help things wonder- The oats almost all sowed and potatoes, but not much ground d for corn. The wheat looks fair t so good as was expected. Grass look excellent, especially clover. are in full bloom now; some of rly ones were touched with the last week. This county is now in in the quarantined area for the se beetle. The Cow Testing Assoa will finish a very successful year's this month and most members will e in the organization. Retail prices bout the same: wheat, $1.80; oats, ran, $1.90; gluten, $2.10; oil meal, eggs, 32c; butter, country, 52c; creamery, 60c; chickens, live, 28c, wholesale.—C. N. D., April 21.

Union County, Pa.—A much needed rain is falling. Altho month was very dry wheat has made a good growth. Oats seeding has been done thruout the month. Sod for corn has been plowed and a few farmers have planted corn this week. Michigan Russet potatoes have been planted by the potato growers of the county, and the members are planning to incorporate the organization. Several new spraying outfits in the county, and the second spraying of apple orchards has been done. The stand of grass on wheat stubble is generally a good one, but the new seedings of clover have not made much growth, due to continued dry weather. Since farm sales have ended there has been very little doing in the sale of cows. There was an outbreak of hog cholera in the country, caused by a shipment of shoats to this county. One man lost eleven shoats by this disease. Implement dealers have sold a lot of new implements to farmers during the past two months, showing that farmers are encouraged to produce. Prices: wheat, $1.60; corn, $1.15; oats, 55c; potatoes, 40c; hens, 28c; eggs, 26c; veal calves, 10c; hay, $15 a ton. The funeral of State Superintendent Dr. J. George Becht, in Williamsport on the 29th, was largely attended by educators from the central part of the state. He was born on a farm near Hall's Station and never lost his love for the country and for the rural schools. His life is an example of how country boys forge ahead in the battle of life in all lines.—J. N. G., May 1.

York County, Pa.—Owing to the early opening of spring weather the farmers have gotten a good start. Oats is all sown and some of the earliest sown is up and looking well. Potato planting is nearly all done; the acreage is about the same as last year. Many farmers are using northern-grown certified seed potatoes. There were four carloads from Michigan and one carload from Maine brought into York County by the county agent, besides several hundred bushels that were shipped by local dealers. Many farmers about ready to plant corn. On account of the poor corn crop of last year many farmers are compelled to buy all of their seed. Wheat fields are looking good except the late sown ones where the stand is thin. Clover seed is about all sown. The clover fields are looking good. Wheat, $1.65; corn, $1.25; oats, 45c; potatoes, 90c; eggs, 26c; milk, $2.40; butter, 35@50c; hogs, 14c live weight; steers, $9.75.—W. K., April 29.

Lancaster Tobacco Letter

NOT more than fifteen per cent of the 1924 tobacco crop remains in the hands of the growers. Sales, while not large, have been consistent for the past several weeks, and buyers are gradually absorbing the available supply of last year's crop. Most of the buyers now in the field are small independents. The big buyers have about supplied their needs.

Some firms have held their price level to that established early in the buying season and are paying fourteen and fifteen cents for good quality crops. Other firms are buying below that figure and much of the crop is being moved at prices of eight, nine and ten cents per pound.

A small number of business men in various parts of the county who have hitherto had no direct connection with the local tobacco industry have started to buy leaf of the 1924 crop lately. They have organized into local packing firms and will carry on an independent packing business.

The committee of organization whose task it is to guide the embryonic development of the proposed cooperative marketing association held their first meeting in the rooms of the Farm Bureau this afternoon. Sub-committees were named and steps will be taken at once to get the preliminaries of actual organization under way.—Garden Spot Farmer.

He (teaching her to drive)—In case of emergency, the first thing you want to do is to put on the brake.

She—Why, I thought it came with the car.—Northwestern Purple Parrot.

Feed You Can Trust

You can trust Corn Gluten Feed as a faithful friend. It will never go back on you. That's the kind of feed you want.

This pure corn feed has won big records in the feed-lot—in the milk can—and in poultry yards. It is a valuable ingredient in any ration.

All protein is not the same, but you can always be sure of getting highly digestible protein of **the right kind** in Corn Gluten Feed. It's made entirely from corn.

You would have to feed about 2½ tons of corn meal to get the same amount of protein contained in one ton of Corn Gluten Feed.

Cut down your feed cost. Increase your profit. Use Corn Gluten Feed in your home mixed rations for all livestock and poultry.

If you are feeding a ready-mixed feed be sure to buy from a manufacturer who makes a feed with Corn Gluten Feed in it.

Mail the coupon and we will send you an interesting booklet entitled "Are You Buying Tags or Feed?"

Famous Swedish Treatment Stops Abortion

Foreign Treatment Now Giving Amazing Results in Herds Considered incurable. Easy and Safe to Use.

JOHN W. FROBERG

Chicago, Ill.—Complete freedom from the ravages of the disease contagious abortion that costs American farmers over twenty million dollars yearly is now possible through the use of an old Swedish abortion treatment, according to statements from thousands of American users. They say the treatment completely stops even the worst cases and has saved entire herds though its remarkable powers.

John W. Froberg, a native of Sweden, introduced the treatment in this country 9 years ago when he used it to cure his herd after all domestic treatments had failed. Its fame spread by word of mouth and wherever used proved practically 100 per cent successful. The treatment is easy to give, gets quick results and cannot harm the animals.

Cow, Calf, Control (C. C. C.), the American name of this treatment is now available for farmers everywhere and is distributed under the absolute binding guarantee that it will stop any case of abortion and that every otherwise normal cow will deliver a healthy calf or the treatment cost is refunded.

Any reader of this paper having abortion in his herd can receive free of charge and without obligation full information about this treatment by sending a postal to the Froberg Remedy Company, 16 Lincoln Street, Valparaiso, Indiana. (Advertisement.)

Germination Tests

EXTENSIVE germination tests have been successfully carried on recently in Queen Annes County, Maryland, by the county agent and farm bureau. At each of the five points where tests were conducted, students in the high school assisted in handling the corn. At Centreville ten thousand ears of corn were handled, four grains being taken from each ear and sprouted. At Sudlersville sixty-eight bushels were tested. At Stevensville the test brought in seventy-two bushels, and Churchville and Queen Anne, where tests are now under way, will handle about 180 bushels. At all points corn was separated into two lots, that showing 100 per cent germination and that known as unfit for seed. Farms having corn high in germination are serving as local sources of seed corn.

Economy Practiced

Thirty-eight dollars was the total expenditure for this testing and that represented the cost of the unbleached muslin used in old-time rag doll testers. Real economy was practiced. The muslin was cut into strips and marked properly to receive the grains for sprouting. Each of the five schools where the testing was conducted received the muslin in turn; this will be properly cared for and used for the same purpose next year. The entire cost was seven cents a bushel and the advance in price on tested corn at least a dollar and a half.—Marylander.

Favorite Roses

DURING the past few years, experienced growers of the various types of flowers, such as peonies, iris, phlox, and roses, have indicated their preference by voting. A survey of votes and preferences recently made by one of the largest growers of roses indicates that there are ten varieties of climbing roses considered the best, according to J. R. Bracken, extension landscape architect of the Pennsylvania State College.

Those selected are: Silver Moon, which has white flowers with showy yellow stamens; Christine Wright, large rose-pink bowers; Dr. Van Fleet, large pink flowers; Paul's Scarlet, large brilliant scarlet flowers; American Pillar, carmine-pink flowers and heavy canes; Tausendschon, profuse bloomer with shell-pink flowers; Wichuriana type, light canes for growing on slopes, glossy green foliage, and white flowers; Excelsa, carmine-pink flowers, superior to old Crimson Rambler; Dorothy Perkins, shell-pink flowers, hardy and an old favorite; and Gardenia, a vigorous rose which is one of the few yellow climbers.

Garden Pointers

WELL-GROWN plants of cabbage and kohl rabi that have been hardened to outdoor conditions may be planted as early as the soil can be prepared in the spring, but cauliflower plants are more tender, so should be held for ten days to two weeks longer before setting in the garden, states W. B. Nissley, vegetable gardening extension specialist of the Pennsylvania State College.

Plant cabbage and kohl rabi eighteen to twenty inches apart in the row, and allow about two feet between rows, says Mr. Nissley. For kohl rabi eight inches apart in the row is sufficient. In case very little soil is attached to the roots it is well to partly plant, then water with a cup of water, and then finish the planting operation by adding some loose soil on top.

Deep and thoro working of the soil preparatory to planting is of vital importance in the growing of any crop. Garden soils should be thoroly turned and spaded, followed by consecutive raking, until the seedbed is thoroly pulverized.

White Diarrhea

Remarkable Experience of Mr C. M. Bradshaw in Preventing White Diarrhea

The following letter will no doub be of utmost interest to poultry rai ers who have had serious losses fro White Diarrhea. We will let M Bradshaw tell of her experience i her own words:

"Gentlemen: I see reports of many losing their little chicks wi White Diarrhea, so thought I woul tell my experience. I used to lose great many from this cause, tri many remedies and was about di couraged. As a last resort I sent the Walker Remedy Co., Dept. 517 Waterloo, Iowa, for their Walk White Diarrhea Remedy. I used tw 50c packages, raised 300 White Wy andottes and never lost one or ha one sick after giving the medicin and my chickens are larger an healthier than ever before. I hav found this company thoroughly r liable and always get the remedy b return mail.—Mrs. C. M. Bradshaw Beaconsfield, Iowa."

Cause of White Diarrhea

White Diarrhea is caused by th Bacillus Bacterium Pullorum. Th germ is transmitted to the baby chic through the yolk of the newly hatch ed egg. Readers are warned to be ware of White Diarrhea. Don't wa until it kills half your chicks. Tak the "stitch in time that saves nine." Remember, there is scarcely a hatc without some infected chicks. Don' let these few infect your entire flock Prevent it. Give Walko in all drink ing water for the first two weeks an you won't lose one chick where yo lost hundreds before. These letter prove it:

Never Lost a Single Chick

Mrs. L. L. Tam, Burnetts Creek Ind., writes: "I have lost my share o chicks from White Diarrhea. Finally I sent for two packages of Walko. I raised over 500 chicks and I neve lost a single chick from White Diar rhea. Walko not only prevents Whit Diarrhea, but it gives the chic strength and vigor; they develo quicker and feather earlier."

Never Lost One After First Do

Mrs. Ethel Rhoades, Shenand Iowa, writes: "My first incubat chicks, when but a few days old, b gan to die by the dozens with Whit Diarrhea. I tried different remedi and was about discouraged with th chicken business. Finally, I sent t the Walker Remedy Co., Waterlo Iowa, for a box of their Walko Whit Diarrhea Remedy. It's just the on thing for this terrible disease. W raised 700 thrifty, healthy chick and never lost a single chick aft the first dose."

You Run No Risk

We will send WALKO White Diarrh Remedy entirely at our risk—postage p paid—so you can see for yourself what wonder-working remedy it is for Whit Diarrhea in baby chicks. So you can prov —as thousands have proven—that it wi stop your losses and double, treble, ev quadruple your profits. Send 50c f package of Walko—give it in all drink ing water for the first two weeks an watch results. You'll find you won't l one chick where you lost hundreds be fore. It's a positive fact. The Leavitt Johnson National Bank, the oldest an strongest bank in Waterloo, Iowa, stan back of our guarantee. You run no ris If you don't find it the greatest litt chick saver you ever used, your mon will be promptly refunded.

WALKER REMEDY CO., Dept. 517, Waterloo, Iowa.

Send me the [ ] 50c regular size (or [ ] $1 eco nomical large size) package of Walko White Diarrh Remedy to try at your risk. Send it on your pos tive guarantee to promptly refund my money if n satisfied in every way. I am enclosing 50c (o $1.00). (P. O. money order, check or curren acceptable.)

Veterinary

Conducted by W. C. Fair, V. S.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We cannot make reply by mail. This is one of the most valuable columns of the paper and we invite readers to make use of it. Clippings from this column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

INDIGESTION.—I have a mare that was taken sick about two weeks ago. She was brought from the West last January, worked her carefully since and she has been fed on oats and hay. She refused to eat her grain at noon, had been working her during forenoon, plowing. She acted dumpish, when walking she staggered some, jerked head while eating and drinking. She seemingly recovered from first attack, but has had a second attack.—J. G. C., Tunkhannock, Pa. Doubtless a change of diet and keeping her bowels fairly active will very soon make her well. Feed her plenty of roots, place salt within her reach, and water her often. A short walk several times daily will do her good. If you have clover hay, feed her some of it. Give her a teaspoonful of air slaked lime and a dessertspoonful of powdered gentian in feed two or three times a day. Her mouth should be examined.

MUSCULAR RHEUMATISM.—Some time ago I was hauling cinders with my eight-year-old mare, the weather changed and it started to rain, the following day she was lame in the right front leg and could hardly walk; then the lameness shifted to the left front leg, now most of the lameness is in the left hind leg. The leg is not swollen and I fail to find a sore spot. She does not appear to be sick and is in fair flesh.—H. C. G., Juniata, Pa. Doubtless your mare suffers from muscular rheumatism and she will be made more comfortable if given a teaspoonful of nitrate of potash in drinking water three or four times a day. Avoid getting her wet with cold rain, keep her bowels open, this can be done by feeding roots or well salted bran mash.

TO J. A. D.—In reading your veterinary column I see where J. A. D., of Mayport, Pa., asks about his female dog that runs and howls as tho in pain. My brother had a dog that acted the same way. Some said he was having fits and some even said rabies, but after being closely watched he was found to be suffering from constipation. After a good dose of castor oil he got well. Have someone hold the dog and draw lips back, then pour castor oil behind the eye teeth. This is the easiest way to give medicine to a dog.—Mrs. F. S., Lawrence County, Pa.

WORMS.—I have a mare that has been troubled with worms for the past twelve months, have noticed her pass some pinworms.—M. B., Carroll County, Md. Fast horse for thirty hours, give four fluid drams of oil of chenopodium in capsule, followed immediately by giving one quart of raw linseed oil. Flush the rectum, using one part coal tar disinfectant in thirty parts of tepid water. If this mare is with foal, don't give her above treatment.

TEAT STRICTURE.—Will you please tell me how to enlarge the teat canal thru teat of my cow? The stream is small and milking difficult and tedious.—R. M., Centre County, Pa. Have your veterinarian dilate the teat canal. Perhaps if the external opening was enlarged by cutting, this would make milking easier.

A lady giving a lecture on spiritualism told how she had lately got into communication with her departed husband, and that he had asked for cigarettes. "But," she added, "I am at loss where to send them."

"Wurra!" exclaimed an Irishman in the audience, "when he did not ask for matches we should know where [illegible] to send 'em."

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 90,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial and send cash with order. Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (55 cents per agate line). Livestock advertising not accepted in this department. Minimum, ten words.

Kills bugs—controls diseases—improves foliag

A still better Pyrox
REG. U.S. PAT. OFF.
TRADE MARK REGISTERED
the powerful triple-duty spray

Its soft, cream-like form guaranteed by 27 years of manufacturing experience.

Still easier to use
Still more effective

THE last word in a scientific, modern compound to protect plants from insects and blights! For over a quarter-century Pyrox has been known as the handiest and most efficient spray material on the market. There is nothing else like it! And this year, due to advanced manufacturing methods, Pyrox is even better than ever. Smoother; always ready to use: always soft and plastic.

Five minutes and you're ready to spray

No fuss or mess with Pyrox. No guesswork. No weighing out and mixing different ingredients. No hard lumps to break up. Simply dip this creamy-smooth paste out of the jar or can: add cold water according to directions; stir, and in a few moments it is ready to use. You have a perfect mixture that sprays, mistlike, through the finest nozzles and lays a thin film over the whole plant.

Insects and other plant pests simply can't live or stay where Pyrox is sprayed. Blights and rusts can make no progress.

Pyrox is very economical: Because it is so handy to use, it saves your time. Because it is so fine, it goes far. Because it sticks like paint, frequent sprayings are unnecessary.

Pyrox does three things at once

You need only one spray when you use Pyrox. For Pyrox is both an INSECTICIDE of *deadly poison* and a powerful FUNGICIDE *extra high in copper.* Thirdly, Pyrox improves foliage—lengthening the growing period, increasing yield and improving quality.

Use Pyrox especially for potatoes, other vegetables, small fruits and rose bushes. Ideal for the home gardener and truck farmer. Jars, cans, drums and barrels. Dealers everywhere.

BOWKER CHEMICAL COMPANY
40 West Street New York City

Other Products of the Bowker Line

BOWKER'S ARSENATE OF LEAD. Paste and powder. Highest quality. A poison for killing leaf-eating insects.

LIBRARY N.J. MAY 18 1925

PENNSYLVANIA FARMER
AGRICULTURE THE KEYSTONE OF NATIONAL PROSPERITY
ESTABLISHED 1880 PUBLISHED WEEKLY

Vol. 91—No. 20 PHILADELPHIA, PA., SATURDAY, MAY 16, 1925. $1.00 a Year

Potato growers survey the results of another year's research on storage problems at the Marble Laboratories. Page three.

Every acre a *cleared* acre

GET those stumps and boulders OUT! Make every square foot of your farm produce paying crops.

Stumps and boulders interfere with the complete cultivation of your field. They are the cause of accidents to the farmer, his horses and implements, besides being a breeding place for plant and animal pests.

Use du Pont dynamite to ensure a first-class, thorough job of land clearing. Look for du Pont on the case or stick when you buy your supply of explosives at your local dealers.

Write today for your *free* copy of the "Farmers' Handbook of Explosives"—110 pages of useful information about the selection and use of du Pont explosives to obtain more cleared acres.

Clean Out The Wood Chucks

Woodchucks are a nuisance; they destroy thousands of dollars worth of farm crops every year.

You have probably tried shooting, trapping and poisoning these bothersome rodents without success. You can now kill them by using

CYANOGAS

(REG. U. S. PAT. OFF.)

CALCIUM CYANIDE

with less trouble and expense than by any other method.

The application is easy and safe. Simply place a heaping tablespoonful of Cyanogas (Calcium Cyanide) in the opening to each burrow. The moisture in the air liberates hydrocyanic acid gas, which does the killing.

Your dealer has Cyanogas (Calcium Cyanide) or can get it for you. Or, we will deliver a 5 lb. tin sufficient to kill all the woodchucks in 80 burrows for $2.50.

he Canton Potato Growers' Meeting

Experiments at the Marble Laboratories Reveal the Best Storage Methods

By S. W. FLETCHER
Staff Contributor and Adviser

MEETING of potato growers was held at the Marble Laboratory, Inc., Canton, Pa., on Fri- May first. In spite of the protracted rains slippery roads, which kept many away, 146 registered, coming from all parts of the e, and some from neighboring states, includ- representatives of the railroads from New k, Chicago and Boston.

The purpose of the meeting was to observe discuss the results of the experiments on po- storage now drawing to a close the season. These experiments conducted by Mr. L. M. Marble, the cooperation of an Advisory mittee consisting of W. A. Mc bin, of the State Department of culture; William Stuart of the Department of Agriculture; R. Anthony, of State College, and Straw and D. E. Goodenough, Potter County.

Ventilation Problem Studied

he forenoon was spent in exam- the 2,[illegible] bushels of potatoes ed in bins, bags and crates, in rent rooms and under different itions. These potatoes were se- d from the Potter Cooperative to Association of Coudersport. tubers in the different lots show- arious degrees of sprouting and y and afforded a concrete demon- ion of the relative value of dif- t storage conditions.

he work this year has centered he value of ventilation. It was ght out [illegible] clearly that con- s ventilation, so as to give at four [illegible] changes of air in the cellar an keeps the potatoes dry and thus prevents ting and the development of rots and molds. order to provide for the free circulation of the tubers are stored in crates, sacks, or in low bins not over three feet deep. These bins d not be tight. The "sweating" of potatoes, e top layers of the deep bins, with the conse- increased decay, was found to be due to the of respiration of the potatoes. This rises the bottom of the bin, laden with the mois- of respiration, which is condensed on the atoes when it comes in contact with the bove them, if that air is cooler.

At noon the visitors were the guests of Mr. and Mrs. Marble at a satisfying luncheon, and the program followed. Hon. F. P. Willits, Secretary of Agriculture for Pennsylvania, stressed the value of cooperation between the several state and federal agencies for agricultural progress, as evidenced by the results of this project, and expressed the hope that similar cooperation might be secured on other projects in the future.

William Stuart, of the United States Department of Agriculture, pointed out the disadvantages of using immature seed, and suggested that the Potter County growers should consider whether they are not losing because of the comparatively short season of growth of their crop, and the somewhat immature condition in which the tubers are harvested.

A fine old oak on the farm of Frank Yearsley, Newcastle County, Delaware. It shades the yard and reaches to the field across the road.

Three Factors Determine Value of Seed Potatoes

W. A. McCubbin, of the State Department of Agriculture, emphasized that the value of seed potatoes depends not only on good cultural conditions and careful roguing during the growing season, but also on maintaining such storage conditions as will prevent the development of disease.

Bert Straw, county agent of Potter County, reported the experience of the Coudersport storage. One season the loss of potatoes stored in deep bins and without provision for thoro ventilation was about sixty per cent. This year, after installing a ventilating system under the direction of Mr. Marble, and storing most of the crop in sacks, the loss will be less than five per cent.

R. D. Anthony, of State College, showed by experiments conducted at the Marble Laboratory and at State College, that the temperature of the bank cellar storage, which is the type most commonly found on Pennsylvania farms, is controlled absolutely by the normal temperature of the ground at that time of the year, and that no amount of ventilation can change the temperature of the storage more than a few degrees above or below the temperature of the ground. The purpose of ventilation in a bank cellar is to provide fresh air and keep the tubers dry, not to cool the cellar.

Disease Control the Next Problem

If, on the other hand, the storage is built wholly or largely above ground as in the cellar of a converted bank barn, then the ground temperature does not control the temperature of the cellar, and resort must be had to ventilation on cool nights, and closing the doors during warm days.

L. M. Marble summed up the experiments and discussions, and stated that the research with potatoes next year probably would center on the problem of controlling disease in storage. He stressed the importance of a hard skin as affecting the keeping qualities of the tuber and stated that much of the difficulty arises from careless handling of potatoes the first ten days after digging before the skin has hardened, making it possible for disease to enter.

Mr. Marble called attention to the bulletin on the construction of the bank cellar

SOILS AND FERTILIZERS

By Dr. J. G. LIPMAN
Director New Jersey Experiment Station

Questions on these subjects are invited.

What proportion of nitrogen, phosphoric d and potash are required per acre for to- co, wheat, legumes, and truck garden ps and what amount of lime?

Are there any products on the market taining cellulose-destroying bacteria, or is re any method for culturing them and in- lating straw or humus with them?

What crops prefer ammonium sulphate to dium nitrate?—M. A. L., Delaware County,

he amount of plant food removed by different will vary with the season and the fertility e land. A tobacco crop producing 1000 s of leaves will contain about 60 pounds trogen, 8 pounds of phosphoric acid, 80 s of potash and 60 pounds of lime. A wheat producing 25 bushels of grain and 2500 s of straw will contain about 40 pounds of , 18 pounds of phosphoric acid and 20 s of potash. Alfalfa will contain per ton about 50 to 60 pounds of nitrogen, 10 to 12 pounds of phosphoric acid and 40 to 50 pounds of potash.

Green vegetables, because of their high content of water, contain in proportion less plant food. For example, young asparagus shoots will contain about .3% of nitrogen, .1% of phosphoric acid and .25% of potash. Cabbage contains about the same amount of nitrogen but is somewhat richer in potash. Carrot roots will contain about .2% of nitrogen, .12% of phosphoric acid and .5% of potash

Bacteria and Fungi Destroy Cellulose

Cellulose destruction is accomplished both by bacteria and fungi. A study of cellulose-destroying bacteria and fungi has been made by the Bureau of Plant Industry of the United States Department of Agriculture and by the New Jersey Experiment Station. A number of European investigators have contributed some interesting information on the subject.

Cellulose-destroying organisms may be obtained in a most practical way by composting manure with straw and cornstalks. After the compost is fully ripe, it will be rich in cellulose-destroying bacteria. Material from such ripe composts may be used for inoculating straw or humus.

Some Crops Have Special Preferences

The most notable examples of crops preferring nitrate of soda to sulphate of ammonia are sugar beets, tobacco and cereals. Rice is a crop that will prefer sulphate of ammonia. Crops like potatoes and corn will do almost equally well with either. Nevertheless, all crops not having a sufficient supply of nitrogen in the soil will be benefited by applications of materials containing nitrogen whether they be ammonium salts, nitrates or animal and vegetable refuse products.

OUR JOB is to serve our readers. **Whenever you are puzzled write to us and we will help you if we can.**

No one is useless in this world who lightens the burden of it to anyone else—Charles Dickens

It's Up to the Governor

WHILE it may be too late to do anything about it when this issue reaches our readers we are sure all dairymen will be interested in the summary of the tuberculosis eradication situation presented on page 13. The Governor has the power to permit this work of cleaning up the state to go on at full speed, or to cut down the appropriation on the plea of insufficient funds and hamper the whole program. It is difficult to see where the money could be spent to better advantage than in protecting the health of the people and stabilizing the great dairy industry. But, of course, the dollars cannot be stretched; if they are to be spent on a hundred other things this business of safeguarding Pennsylvania's milk supply will have to wait.

The Upkeep of Highways

ONE of the large and influential organizations of Philadelphia recently voted favorably in a referendum on the question of putting the entire cost of the upkeep of highways on the users of the public roads. This is but another instance showing the very general tendency of big business men to slip out from under the burden of public taxes. Who and what makes a city business man prosperous if it is not the business which other people bring to him. The improved highways of the country have added to the business and property value of the city man quite as much as they have added in the country. The vote in this instance is a reflection either on the honesty or the business sense of the organization proposing it.

Let the Public Try

LAST year Secretary of Agriculture Willits made a strong endeavor to have the fair associations eliminate the objectional features heretofore prevalent at many of the fairs. Since the law governing this matter had been mutilated some time ago he could do nothing more than to ask the cooperation of the fair managers in ridding the grounds of the worst classes of offenders. This the managers agreed to do, but an official examination of some of the exhibitions showed that the agreement had been ignored in many instances. As we have pointed out many times, the public could if it would clean up every fair in the state. All that is needed is well organized pressure brought to bear upon the fair authorities. If all the organizations in a county which ostensibly stand for decency and good order should come out flat-footed for clean fairs and use their influence for the creation of a favorable public sentiment the fair managers would not dare ignore them. But you will note the last sentence began with an "if," and we are fully aware that the general public is either indifferent or weak-kneed when it comes to the question of making a fight for a moral principle, however much the individual citizens may talk in private.

Lowering Production Costs

TWENTY-FIVE years ago the average wholesale price of a motor vehicle was $1170. The number manufactured was 4192. In 1924 the average wholesale price was $644 and the number turned out was 3,617,602. A farmer would have to sell 1482 bushels of wheat to buy an average car a quarter of a century ago. Last year it required only 506 bushels.

The chief items making up the cost of manufacturing an automobile are labor and materials. These costs have doubled and quadrupled in the last twenty-five years. How then has it been possible to reduce the cost of automobiles by one-half? Simply by increased production and the adoption of more economical methods. Competition has forced the latter and demand made the increased production possible. Of course, farmers are already producing as much as the markets demand but there is a possible lesson in the other phase of the business. Is a fifty per cent reduction possible at present in the costs of farming? Hardly.

The Spring Weather

IN SPITE of an early start the weather during the last month has not been most favorable for the growth of vegetation, altho it has enabled farmers to do considerable preparatory work. The deficiency in temperature served to check the too rapid development of most fruit. It is reported that sweet cherries, peaches and early strawberries have been severely injured in many sections. The cool, drizzling conditions have been unfavorable to insect activity and it is feared that blossoms may not be fully pollenated and that the set of fruit may be light. Even when a fair set is apparent in such seasons an extraordinary June drop usually follows. Grass and winter grain have prospered well during the past month and pastures are in good condition. The full-bloom period of the dogwood, a sign which many farmers consider as infallible as indicating the time to plant corn, is ahead of other conditions this year.

Larceny Law for Farmers

THE decision of the Berks County judge that the taking of fruit from trees is not larceny, because while attached to the trees the fruit is real estate, has resulted in extending the larceny law to include fruit, flowers, shrubs and other farm products. The publicity given the judge's decision aroused farmers generally and the Berks County Horticultural Association got busy and had a bill prepared as stated and it has been signed by the Governor. This action was timely and will tend to offset the influence of the decision which, no doubt, would have encouraged the marauding element to greater pilfering.

The taking of fruit and other farm pro ucts seems to be regarded as a more serio offense in many other states than is the c in Pennsylvania. A reader in California, ing our reference to the above mention case a month ago, has sent us a clipping fro a paper in that state which tells of a rece case of the arrest of two men for taki oranges from an orchard. The judge se tenced each man to jail for ninety days a imposed a fine of $250. This was but one-h the extreme penalty.

Horse Census

WHILE there are no accurate figures sho ing the present number of horses in t United States there is sufficient evidence t the number is gradually decreasing. Repo sent to the United States Department of A culture from 26,000 farms indicate that number of colts and young horses raised been below replacement needs for some y and that within five years there will be two-thirds as many mature horses on fa as now.

While it is true that other motive po will continue to be introduced to take place of horses, yet there will always be a field in which horses and mules will be best and most economical source of pow looks as if horse breeding on the farm another instance of the under estimatio needs and possibilities. In these days w the use of horses on the roads is compara ly nil, there is no good reason why the mares might not produce colts to good vantage. There is every indication that the time they come to a serviceable age t will be a good demand for them.

Washington Letter

FEDERATION GAINING.—The A ean Farm Bureau Federation is gaining membership, in morale and personnel, a ing to reports brought back by the W ton representative from the Chicago me of the executive board. Indiana is now per cent with the Federation. The I Agricultural Association and Iowa Bureau are working in harmony with national organization. The Michigan Bureau is in a better condition than for time past.

EXTRA POSTAL CHARGE ON CHI —The ruling of the Postoffice Departme quiring all parcel post shipments of chicks to bear a twenty-five-cent spread dling charge is without legal basis, says Reid, Washington representative of the A ican Farm Bureau Federation. The law it plain that this special handling charge be optional with the shipper. The Pos Department, however, takes a different of the law.

HANDLED AS FIRST CLASS MA In reply to an inquiry from Mr. Reid, master General New says that "becau their character it has always been ne in order that day-old chicks may reach destination alive, to give parcels cont them the same expeditious handling a livery accorded to first-class mail Therefore, the twenty-five-cent specia age charge is applicable to parcels of da chicks. I am sure you will appreciate th slower service would not be the desire of pers, and yet the slower service that is ordinary parcel post matter is all that be accorded to baby chicks in case the tw five-cent special charge was not paid."

It is indicated by this attitude of the master General that the extra twenty-fiv handling charge is to be applied to all of perishables if given the same trans tion facilities that were provided befo postal raise went into effect.

PREDICT HIGHER WHEAT PRICES.—Higher prices for wheat within the next month are predicted by E. B. Reid, of the American Farm Bureau Federation, who believes that these higher prices are likely to continue during the coming crop marketing year. Latest reports indicate that there will be little more wheat than domestic requirements produced in this country this year, which with the unusually small quantity left over, should mean a higher range of prices, which will also make effective the forty-two-cent per bushel tariff on wheat.

The winter wheat crop was badly damaged in places during the winter. The spring wheat crop is about equal to the ten-year average in acreage, which will mean a crop about equal to consumptive needs with average yields.

TO RAISE PRICE ON POTASH.—Representatives of the German and French producers of potash met in Paris early this month and signed an agreement to fix a higher price on potash, according to a report received in Washington. Under this agreement the American market is divided seventy per cent for the German and thirty per cent for the French producers of potash. The result will be, it is said, that the American farmers will be compelled to pay higher prices for fertilizers containing potash.

ASK TARIFF ON CREAM.—If the tariff on butter is raised from eight to twelve cents a pound by presidential proclamation following favorable recommendation by the nited States Tariff Commission, the dealers in cream and probably the producers of fluid milk will insist upon a corresponding increase in the ariff rate on their products. The ream dealers are already asking hat the rate on cream be comparble on the basis of butterfat. They ay a large amount of cream is being hipped into this country from Canda in competition with cream prouced on American farms.

FARM SITUATION ENCOURAG NG.—The agricultural situation is omewhat more encouraging than a ear ago, say the crop specialists of he Bureau of Agricultural Econom s. The livestock industries, altho low to right themselves, are in a uch better general position than st year. Sheep are apparently at r near the peak of a price cycle. logs have doubled in price since last ring and, if history repeats itself, ill be high for at least a year to ome. Beef cattle have recently rned upward in their price cycle nd again if history repeats itself, are eight or ten years of rising rices ahead. The dairy industry hows signs of some improvement on e eastern market milk end.

NEW ZEALAND USES MANY ILKERS.—The New Zealand Coperative Dairy Company claims to the largest individual dairy comany in the world. Its output for 922-23 season brought the farmers 21,899,000. In 1891 New Zealand upplied less than one per cent of e total British imports of butter. 1923 and 1924, she supplied twen-eight per cent of the total British tter imports. In 1901 only three cent of the total British imports cheese came from New Zealand; 1924 about fifty-two per cent of e British cheese imports came from w Zealand. Sixty-one per cent of w Zealand butter scored ninetyo and above in 1921-23 as comred with forty-seven per cent in 12-1915. It is said that half of cows in New Zealand are milked machine.—E. E. Reynolds.

Harrisburg Letter

CLEANING UP IN EARNEST.—ennsylvania is about to start on a mpaign for eradication of tuberlous cattle such as many people tively identified with agricultural atters have long desired but, hich, owing to failure of successive ministrations to demand enough oney never got started. Indications e the money made available this ar for the coming two-year period ll be greater than in a decade and e only difficulty will be to keep ople in the counties from pressing hard for testing. In the neighrhood of forty counties have come forward with the preliminary steps, fully 250 townships being on the list. This is one-tenth of the whole number of townships in the state. Counting in the various appropriations there has been three-quarters of a million made available for indemnities this year without counting in the Haines bill providing $3,000,000. This figure will probably be cut down by the Governor, owing to insufficient revenue, by the time this is printed.

PLANS FOR OILING.—State highway authorities have worked out a plan for oiling of roads which it is expected will be completed before July and meanwhile the scheme of doing one side of a road and allowing the other to rest will be followed. The department has stopped covering a whole road at one time.

ASKING ABOUT TELEPHONES.—The State Department of Agriculture is about to ask new information on telephones on the farm. It has lined up pretty thoroly the situation as regards farms equipped with electricity and other lighting systems; those with power connections and the number of radio sets, trucks, tractors and motor cars.

UNTESTED SEED
YOU DONT HAVE TO GO TO CHICAGO TO GAMBLE IN CORN
LEET

The Super-optimist.

SEPTEMBER BIG MONTH.—Lists of county fairs and similar shows issued at the Department of Agriculture show that of the eighty fairs scheduled for this year fully two-thirds will be held in September. The first fairs will be held in mid-August.

GASOLINE FOR WEEDS.—Dr E. M. Gress, the state botanist, is urging more work for elimination of the dandelion, plantain and other weed pests and suggests that gasoline be used to do it. Exhaustive tests have been made by state authorities and there are figures and facts to back up the suggestions.

THE DOG FUND PLAN.—Approval by the Governor of a bill the other day provides for a definite division of the proceeds of the dog license fund. Of a million and a half estimated the Department of Agriculture will get $450,000 which ought to help out considerably when taken with regular allowances. Then $300,000 is set aside for payment of indemnities for cattle and $750,000 for the general work of controlling diseases of animals and poultry which means the Bureau of Animal Industry.

THE NEW FISH LAW.—The provisions of the new amendments to the fish code are simple. People fishing on their own lands are not affected, but everyone else sixteen years or over will have to take out a license and the use of various devices for catching fish is abolished.

GAME SEEDING.—From what is reported to the State Game Commission more farmers and land owners have sown millet, buckwheat and various kinds of corn for feed for birds this year than ever known before. In many instances back fields or land which is not needed or which can not be advantageously handled has been so seeded, the state contributing toward some of the work or materials. Very few have refused to aid in this seeding for game.

THE FORESTRY BOND ISSUE.—Altho the proposal for the forestry bond issue has been signed and the act to issue bonds, in event the people ratify the loan has been passed and approved it does not necessarily mean the question will be voted on this fall. The time of submission is involved in the soldiers' bonus amendment suit which will be argued in the Supreme Court here late in the month. Indications are the voting will be in 1928.—Hamilton, Harrisburg.

New Jersey Letter

BANKERS ADOPT FARM PROGRAM.—The Monmouth County Bankers' Association, which has cooperated with farmers in various local activities, recently went on record as favoring a definite program for placing farming on a sound economic and more profitable basis. The association endorsed the better organization of individual farm business, thru the aid of regular banking channels, the diversification of farm enterprises and the improvement of farm practices. The association further endorsed the development of junior extension work, the recognition of credit for farmers practicing good business management and the keeping of cost records generally by farmers.

LICE DAMAGE ON PEACHES.—Fruit growers in southern and central New Jersey report considerable trouble this season from lice on their peach trees. This, coupled with other seasonal pests, is giving prominent growers some difficulty in meeting the situation. Heavy and frequent spraying is eliminating danger of permanent damage in many orchards. Indications, however, point to a smaller peach crop in New Jersey than last year. The fruit itself has been damaged only slightly.

SECURE WATER SUPPLY.—Vegetable gardeners in the vicinity of Clifton City, Passaic County, have secured the promise of city officials for a water supply for irrigating their farms. Under the supervision of the county agent a petition bearing the names of sixty growers and guaranteeing the use of a certain amount of water was submitted to the City Council. An irrigation project demonstration followed, which over 100 persons, including city officials, attended. It resulted in the securing of a water supply for intensive gardening in this area.

JUNIOR FIELD MEETING.—Plans are under way at the New Jersey State College of Agriculture for a three-day junior field meeting at the College Farms on June 15 to seventeenth. Acceptances received at the college indicate the attendance will be between 300 and 400 boy and girl members of junior clubs thruout the state. Judging contests will be held in conjunction with the field meeting and the Department of Home Economics at the College is preparing demonstrations and lectures of interest to the homemaking clubs. To accommodate the junior field meeting at the College the regular adult field day previously scheduled for June 17 will be held on Thursday, June eighteenth.

WINS COUNTY CUP.—The Somerset County Holstein Association has presented a silver loving cup to the Suydam Farms, which made the best Advanced Registry official record in 1924 among members of the association. The prize-winning cow gave a well-balanced record of 707 pounds of milk and 24.427 pounds of butterfat per week. Several other members' cows crowded the winner for first place.—B.

New York Letter

REFORESTING IMPETUS.—Movie cameras made records of the planting to an eighty-four-acre farm in Cortland County to trees on Arbor Day. The farm had been donated for the purpose to the Sportsmen's Club of the county and school children helped to set the trees. Transportation was given free to any who would help and fifty acres were set in one day.

HORSE BREEDERS RECOGNIZE VALUE OF PUREBREDS.—Of the 456 registered stallions in this state seventy-three per cent are purebred. This is not so good a showing as the State College hopes to make it, as the average for all the states is eighty-two per cent, while five states have 100 per cent records. Horses are cheap, and are largely imported from the West or Canada.

LIVESTOCK CHANGES.—Hogs have rapidly risen in price here since April, 1924. High wages and a demand for good food and good clothing have brought sheep to the highest level on record, excepting 1918. Beef cattle are low in price, but are turning towards better returns.

DAYLIGHT SAVING AGAIN A SNAG.—Granges of the state are again forced to protest clock tinkering. Syracuse will hold a public hearing on the question this week. A number of cities still insist on moving the clock ahead for the benefit of the leisured classes, while physicians, teachers, schools, welfare and farm organizations oppose the measure.

DAIRY NOTES.—The present membership of the Dairymen's League is 65,000, everyone a milk producer. During the fiscal year just closed the League sold $75,000,000 worth of milk and milk products. The members operate 5,000,000 acres of farm land and own 1,000,000 cows.

CROP WORK.—Spring planting is slightly ahead of the season, and would have been more so but for the heavy rains of the past ten days. Scarcity of good seed corn, of fertilizers and of dependable clover and alfalfa seed are the leading problems, next to low prices for farm products. Commuting to city jobs while living in the country is greatly on the increase with both city and rural people. This is the correct solution of present difficulties, according to State College farm economists.—M. G. Feint.

YOU need your horses every day. Watch carefully for strains, bruises and minor ailments. And be sure to keep Gombault's Caustic Balsam on your shelf—ready for instant use. For over 41 years it has been famous as a remedy for Sprains, Spavin, Splint, Capped Hock, Curb, Fistula, Thoroughpin, Shoe Boils, Poll Evil, Wire Cuts and Muscular Inflammation.

Apply it yourself. Just follow directions that come with bottle. Much better than firing and doesn't discolor the hair or leave the slightest scar. Don't let your horses suffer from something you can cure yourself. Buy Gombault's Caustic Balsam today. $1.50 at all druggists, or direct from us on receipt of price. The Neshaminy Gardens

(OUR FARM)

Where an Editor Works and Thinks

IT IS not so many years ago since people ate vegetables only as their fancy dictated. If they had a special fondness for this or that green thing, they ate it because they liked it. Almost everybody "craves" some kind of greens in the spring after a winter menu of corn, pork and buckwheat cakes, but how many ate them because they knew they needed them? Very few. Since Doctor McCallum popularized the hitherto unknown vitamins, however, and the different educational agencies have made everybody acquainted with them and their habitats, the consumption of vegetables and fruits has been greatly increased. The doctors now prescribe them as part of the infant's diet.

+ + +

THE vegetables which have been added to the regular diet in greatest proportion are lettuce, spinach, carrots, tomatoes and asparagus. But the consumption of all vegetables has increased in almost like proportions. The same is true of berries. Some claim that the greater market for small fruits is due to the Volstead act. There may be some increase because of their use in the home-making of wines, etc., but the chief reason is the greater knowledge of their value and the greater ability to buy.

+ + +

THE cuts presented herewith show three operations at Neshaminy Gardens. The little seeder referred to some time ago was used in planting cabbage and celery seed for plants. Also, beets, carrots, lettuce and rutabagas. This patch contains about three-quarters of an acre and it is here we are planning to establish our trial irrigation system. The other small implement shown is a one-row fertilizer distributor. We borrowed this one from a neighbor because we could not find a satisfactory one on the market. The name does not appear on it and if any reader can tell us about it and where it is manufactured, or if they can inform us of a similar implement, we should be glad to have them write us.

+ + +

THE other picture shows Howard plowing the potato ground with our tractor. The furrow is fourteen inches wide and seven inches deep. He is rather proud of the work it is doing. The plow has both a coulter and a jointer and the alfalfa and heavy sod are neatly turned under out of sight. When the field was harrowed and dragged ready for the planter it was as fine and friable as a garden.—R. P. K.

Distributing fertilizer in the row.

A modern seeder used in well-prepared soil makes garden seeding a pleasure.

The Weather

WEATHER, which may make or break a farmer—filling his bins and his bank account one year and leaving both empty the next—is to have its mysteries investigated from a new angle. The National Geographic Society and the Smithsonion Institution in cooperation are to conduct an expedition into one of the barren spots of Asia or Africa where an observatory will be established to study the fluctuations in the heat of the sun and their effects on the earth's weather.

At present weather forecasts are made on the basis of temperatures and air pressures existing at various places on the earth's surface. The centers of pressure drift from place to place, as do bodies of cold and hot air, bringing in their train rains, droughts, cold waves and hot spells. Very often these moving disturbances can be traced and their effects in a certain region foreseen several days in advance.

The scientists who are making studies of the sun assert that in the tracing disturbances of the atmo phere we are merely dealing wit effects, and that if we search ou the causes instead and grow to understand them we can prophe weather changes much more accurately and much farther ahead. The see in the sun and in the variation in heat which it sends out the one primary cause of earthly weather; and they are hopeful that after additional investigation they will be able to determine a method of long range weather forecasting by means of which a farmer can be assured of picking well in advance a proper time for plowing, planting or harvesting, or of taking steps to prvent injury by frosts or droughts.

Idea Behind the Plan

The idea behind the plan to mak long range weather prophesies fr conditions in the sun is a simple o The sun constantly pours forth stream of waves which generate h on reaching the earth's atmosphe The atmosphere absorbs approximately one-quarter of this heat an the rest passes on thru to war the land and the oceans. But th quantity of heat sent out by the s is not constant. It increases or d creases sometimes as much as fi per cent in ten days, tho usuall

ore slowly. These changes affect e air, the water, and the land, and a result weather disturbances are ught about.

Sun Spots Affect Radiation

The most noticeable changes in e heat given off by the sun have n found to be connected with th urrence of "sun spots"—dark as that appear on the glowing rface of solar disk. It becomes ible, therefore, when spots apr near the edge of the sun and nce toward its center, to trace ad of time the changes in the iation sent out, or the "variation the solar constant," as the scien- put it.

It is believed that when careful dies are made of the variations in solar constant in connection with earthly weather following these nges, that similar weather devel- ents can be predicted many days

wing an alfalfa sod for potatoes at Neshaminy Gardens.

d perhaps weeks and months ead.

pper Air Studied with Balloons

The solar constant which serves a basis fo the proposed long range ather forecasts is not the unit of t actually reaching the earth or e instruments at the observatories. e state of the atmosphere at the int at which the observation is de affects this quantity. If it is ar and dry the heat recorded at earth's surface is relatively high; It is hazy or cloudy the heat reded is less. The solar constant, refore, is taken as the unit ount of heat energy that reaches upper limit of the atmosphere, d the recorded amounts are cored by elaborate mathematical ulations so as to represent the ount of heat energy "delivered" the point in the sunbeam's jour- where it first comes in contact the air, and before any of its den is lost to air, other gases, ture or dust particles.

To take care of these adjustments y complex instruments have been loped, capable of measuring the unt of haze and the heat losses. ald in getting the necessary in- ation on which to base the cal- tions very delicate instruments e been sent up by balloons to tremendous heights as 15½ miles the air is extremely rare.

More Quickly Done Now

When the solar constant work was undertaken it was necessary to erve for several hours and then follow this by twenty-five hours of hematical calculation. Because the perfection of observing instru- nts and methods, an observation now be made in less than fifteen utes, and by the use of special ulating devices built for the pur- the computations can be made less than an hour.

THE CHEERFUL PLOWMAN

A Growing Boy

McCAULEY'S boy has grown in ran since noon of yesterday, for he ha in the savings bank some money stowe away! It's honest money, all his own an not his dad's at all; it's his to keep, in vest, or loan, it's subject to his call!

It's not play-money which his dad ha given with a wink, by contract insincer and bad, with question mark and kink nor is it money which he knows his fath er will demand to cut some mortgage tha he owes or debt upon his land!

It's money that he knows is his, the real, the honest thing, not wrappe around with theories nor fastened with a string!

That boy has grown a triple-inch, his chin is tilted high, his glance i straight without a flinch or shifting of the eye! Self-confidence is in hi smile, his jaw is set and firm, he has a courage worth the while without qualm or squirm! He has a self-esteeming pose, a sure and steady poise a look about his very clothes that's missed in many boys! This fellow dad is very wise in method, deed, and plan; the lad thru father's ment size is helped to be a man!—J. Edw. Tufft.

A new low Price

Delco-Light for Every Farm Home

$195

F.O.B. DAYTON, O.

THERE is a new Delco-Light—a Delco-Light that places electricity within the reach of every farm in America. It is lower in price than any Delco-Light Plant has ever been. And it can be bought on terms so easy that no farm family need wait any longer to give its home the wonderful benefits of electric light.

All that electric light means in comfort, convenience, safety and economy is now available to the million farm homes that have always wanted electricity but have felt that its cost was too great.

An Amazingly Low Price

For months we have been working on the development of this new Delco-Light. Our years of experience as the world's largest manufacturers of farm electric plants have enabled us to design a plant that will give dependable electric light to any home. And our enormous manufacturing facilities enable us to build this plant at the lowest possible cost, and to sell it at a price that makes Delco-Light a real economy.

A Non-Storage Battery Plant—600 Watt Capacity

The new plant is a genuine Delco-Light in every respect—will light twenty-four 25-watt bulbs—is strong, sturdily built, economical in operation. It is equipped with a standard Delco starter and an economical starting battery. And its price is only $195 f. o. b. Dayton—the lowest price and the greatest value ever offered in a Delco-Light electric plant.

Completely Installed at a Small Extra Cost

In addition to this, special arrangements have been made whereby the Delco-Light Dealer in your community will install your plant and wire your house for five lights to be located wherever you specify. You will receive with the plant five beautiful spun-brass lighting fixtures complete with bulbs.

And *all* of this—installation, wiring, fixtures, everything ready to turn on the lights—will cost you only $53 in addition to the price of the plant itself.

A Small Down Payment—Balance on Easy Terms

Finally, we have arranged that this new low cost for Delco-Light, completely installed, can be paid on terms so easy that anyone can take advantage of them. The total cost is only $248, including freight (a little more west of the Mississippi). But you make only a small down payment. The balance is payable on easy terms, arranged to suit your convenience.

Write for Details

Never before has such an offer been made. Never before has Delco-Light cost so little and been so easy to buy. It means that any farm home—*your* home—can have Delco-Light today.

We want to send you the full details of this remarkable offer. Write immediately to us or to the nearest Delco-Light Distributor for full information—specifications of the plant, illustrations of the fixtures that come with it, details of our complete installation and wiring plan and the figures that show how easily you can now get Delco-Light.

Sign and mail the coupon. There is no obligation.

Three at Once!

It is just as important to keep your potatoes free from blight as it is to fight the beetle, flea and other profit-destroyers. If at the same time you can invigorate the crop and increase the yield accordingly, at no additional cost, it means **clear gain.**

POTATO SPRAY does all of this, enabling you at one operation to fight off both classes of plant enemies and invigorate your plants. It is a non-freezing powder form of Bordeaux and arsenate compounded with great care—an insecticide and fungicide put up by a company noted for its farm fertilizers and chemicals.

Write today for full details.

Goodyear HEAVY DUTY Cord Tires, for passenger cars, buses and trucks, are available from Goodyear Dealers in the following sizes:

30 x 3½ (Cl.)	34 x 4½ (S.S.)
32 x 4 (S.S.)	30 x 5 "
33 x 4 "	33 x 5 "
32 x 4½ "	34 x 5 "
35 x 5 (S.S.)	

For those who desire balloon tires Goodyear makes a complete line, including the HEAVY DUTY type in certain sizes.

IF YOU want something special in an extra-strong long-wearing tire, get the new Goodyear HEAVY DUTY Cord Tire. It's thicker, tougher, more massive all through. The powerful body is made extra-heavy of the celebrated new cord fabric SUPERTWIST. The tread is a deep-cut full All-Weather. Even the sturdy sidewalls are reinforced against rut-wear. For hard service, or under a heavy car on bad roads, it's the greatest tire you ever used. It keeps going, and pays back its slightly greater cost many times over in the extra mileage it gives.

Garden and Truck Crops

W. C. PELTON, Staff Contributor and Adviser
Manager Pomona Gardens, Newark, Delaware

Preparation of Seedbeds—Tested Tomato Seed

SEEDBEDS for late cabbage and cauliflower ought to be well under way by this time, and the seed planted not much later than May fifteenth. The seedbed ought to be in a place where weeds are not bad, even when the seeds are to be sown in drills and not broadcast. Smartweed, ragweed, pigweed, and wild grasses are the big pests in a cabbage seedbed. These come in droves following an application of manure.

If a piece of land in good state of cultivation can be used, no manure may be needed, or perhaps poultry manure will do, raked into the surface. Commercial fertilizer up to a ton to the acre will pay for itself in the cabbage seedbed, and can be more safely used heavily for cabbage and cauliflower plants than for most other truck crops.

Why Heavy Seeding Necessary

Heavy feeding is necessary because we usually grow a very large number of plants on a small piece of ground, and because rapid growth enables the plants to overcome attacks of insects. Flea beetles often attack young cabbage plants and if growth is delayed for any reason and no dust or spray treatment is used, the crop may be wiped out in a few days. Heavy feeding and dusting together will keep insects well under control.

* * *

We have had occasion to plant this spring two lots of tomato seed that had been treated with a new commercial seed disinfectant. One of the claims of this disinfectant is that it not only does not decrease germination but actually increases it. Surely our plants are very healthy and vigorous, and we are inclined to think that there has been a beneficial effect from the seed treatment. The truth can be known by comparing treated and untreated seed, and that we have not been able to do. At any rate, an ounce of this seed has given between three and four thousand sturdy plants.

Now for the Celery Seed

The next thing will be to observe its effect on celery seed, of which we have both treated and untreated seed. Anything that would hasten celery germination would be a big help. Our untreated seed is several years old, of the same lot used year, and we do not expect any spot in the plants, even tho the has not been treated.—W. C. P.

Use of Hand Duster

WHEN you use one of the ha dusters to control insects diseases on closely planted rows find out pretty quickly how much pays to have the rows straight parallel. It is often possible to two rows at one time with these chines, if the necessary "Y" pipe part of the equipment.

In several respects the delivery the dust from one side of the instead of from above, is an adv tage in the control of flea be and disease affecting the stems lower surface of the leaves. doses, one from each side, will the entire plant a fair treatm when it is rather small, and, course, it is only when the plants small that hand dusters are likely be economical.

Now, as to the straightnes rows; if they are close together one place, far apart in another, lose the chance to dust effecti two rows at one time because dust will be too heavy in one too light in another. Sometimes plants stand too thick for effect dusting with any machine; the edy then is to thin before du the preventive is greater care the seed drill.

Wasting His Time

The other day I saw a man a hand duster on a large bed of mato plants while the wind blowing a gale. He was following rections, putting the dust on as as the plants were above ground, pointing the nozzle at every But with the dust leaving the ten inches above the ground and wind catching it at once, more reached the neighboring road the stems and leaves of the toes. This man worked in a cause but by a bad method.

The wind is a serious dra when there is dusting to be Only in the early morning can expect to find quiet air, and the ence of dew is an advantage ra than otherwise.—W. C. P.

Many Trees Winter Injured

THE past winter, tho not extreme in low temperatures, seems to have developed an unusual amount of winter injury. Peaches were especially susceptible. In much of the northern and central parts of Pennsylvania the fruit buds were killed; they dried up and dropped off when the leaf buds started to grow. Advantage should be taken of this barren year to severely head back, even to dehorn, these trees, so as to get a top of vigorous new fruiting wood. It is not too late to do this now.
